If a company can earn bonus profits with profit sharing, it may find it wise to share them among the employee, the stockholder, the consumer, and the company itself.

Management should strive to invest a higher-than-usual amount in plant modernization and mechanization. In no way should a profit-sharing "commitment" interfere with renewal of the plant.

When a company achieves lower unit costs through profit sharing, it should seek to hold the line or reduce prices of its products. Such a policy will tend to expand sales in markets here and abroad. To compete with foreign industries, U.S. plants must somehow develop the ability to reverse price inflation.

Some of the country's more successful firms can be found on the profit-sharing roster, including Procter & Gamble; Bell & Howell; Eastman Kodak; Lincoln Electric; Motorola; Zenith; Sears, Roebuck; Falk; Signode Steel Strapping; American Velvet; Vendo; Vanadium-Alloys Steel Co.; and thousands of others.

Are profit-sharing companies more successful than others? First of all, firms that do not make a competitive return to shareholders will not long continue with profit sharing. So, it can be fairly assumed that from the investor's standpoint, the profit-sharing plant is at least as profitable as everybody else.

But there is evidence in one field that profit sharers can outstrip their competitors. A recent study by the Profit Sharing Research Foundation contrasted the records of six merchandising companies that had profit sharing and eight that did not.

Said Admiral Burrows: "The study shows that over a 7-year period, 1952–59, from the standpoint of the stockholders, the investments in profit-sharing firms were, as a group, superior by every measure used to judge the worth of investments."

For the profit sharers, certain key indicators had climbed significantly higher. These included: sales, net worth, net income, employee earnings, market value of stock, stock dividends, and growth of invested dollar. Of course, this is fractional evidence and may or may not be applicable to the whole of industry.

EARN NOW, PAY LATER

As indicated before, the deferred or profit-sharing trust plan permits the employee to earn his own security. With or without a trust agreement, profit-sharing funds are segregated for later payment to workers or beneficiaries. Considering labor's drive for security, many companies are finding the solution in profit sharing.

Unlike cash-paying, profit-sharing plans which may lose their punch during long periods of low profits, deferred plans can offer benefits without interruption. They will pay on retirement, severance, disability, death, emergencies—and even layoffs.

Some plans forbid withdrawal of funds but others loan money to finance homes, educations, etc.

Deferred plans are either contributory or noncontributory. Generally, employees prefer the noncontributory plan because it does not add another deduction to the pay slip. Yet, firms with contributory plans rate them as successful because they can offer higher benefits while building a personal stake in the fund. A disadvantage is that employees who contribute may want a role in administering the fund, perhaps pushing for

lenient withdrawals and weakening long-term objectives of the plan.

Though deferred plans do not apply a direct incentive on individual job performance, except in a roundabout way, they will reduce labor turnover, build company loyalty and identification, and decrease strikes and disputes. A successful, well-communicated deferred plan can considerably ease labor's opposition to better methods and mechanization.

The Council of Profit Sharing Industries feels that profit-sharing and wage incentive systems are not competitive. Goals are different. Profit sharing is concerned with the overall climate of labor-management cooperation. Wage incentives are devised to spur the worker to greater output on individual jobs.

The most effective incentive program for labor uses both profit sharing and wage incentives. Exactly this is being done by many plants with deferred profit sharing.

SAY IT WITH CASH

Functioning as a direct production incentive by paying an "immediate" bonus, the cash profit-sharing plans seem to appeal to most workers, especially to younger ones and to women who plan marriage rather than retirement.

Simple to intsall and operate, cash plans offer tangible reward for superior effort. Spirited communication by management of the profitmaking motive can effectively stir up labor's enthusiasm. There's a suspicion that the cash plan is more suitable to the smaller plant, although larger companies have used it successfully. If a factory finds it impossible or impracticable to install direct wage incentives, cash profit sharing can serve as a group incentive.

As has been shown by Lincoln Electric Co., a cash profit-sharing system will function superbly as an individual incentive system. Reported in his book "Incentive Management," James F. Lincoln has conceived a formula to pay profit-sharing bonuses on the basis of personal effort and contribution.

Since cash plans do not provide for retirement needs, a plant with such a system may have to set up a retirement fund anyway.

In the middle ground are the combination profit-sharing plans, which offer deferred benefits while making some current payment. To follow this profit-sharing aproach, a company must share profits more generously.

CALL THE COUNCIL

How does a company enter profit sharing? Not too suddenly, warns the Council of Profit Sharing Industries. Each company must study its specific needs and tailor a plan to fit them. The council's experts are prepared to make studies and recommendations.

Beyond this, profit sharing often entails a drastic change in management attitude. The company should genuinely wish to erase the classic division between labor and management and to welcome the worker as a full-fledged member of the team.

Profit sharing enacted to weaken a union or prevent unionization has a shoddy record. For good results, profit sharing needs sound labor-management relations, a good wage scale, and a significant division of profits. The union should be made an instrument of the profit-sharing program. This can be done by establishing labor-management advisory committees, and full communications.

But it should always be clear that administration of profit sharing is management's responsibility. Never should profit sharing become a negotiable issue. Never, never should profit-sharing funds be diverted to unions for distribution to workers.

FROM THE HORSE'S MOUTH

What are some of the results of profit sharing? Here are the comments of some companies:

1. The Cleveland Twist Drill Co., Cleveland: "Excellent morale and cooperation of employees. Production rose one-third in the plan's first 4 years, with a steady increase since then. Almost no absenteeism and no strikes."

2. Lincoln Electric Co.: "Continually falling costs and higher wages."

3. C. A. Norgren Co.: "Because of profit sharing, the desire of our employees to make a better product at lower cost has allowed us to absorb wage increases of about 200 percent and material increases of about 170 percent with only a 25-percent increase in our product prices. Individual productivity since 1940 has risen 340 percent.

4. Sanborn Co.: "Excellent personnel relations. Improved quality of work. High productivity and increased earnings for employees. Strong loyalty to the company. Employees have, when the occasion demanded, accepted increased workloads willingly and completed them without extra help or overtime. Scrap and spoilage are kept to a minimum. Profit sharing develops in an employee a sense of responsibility and independence, as well as pride and satisfaction in his work."

5. C. H. Dexter Co.: "Increased suggestions from all employees on where improvements could be made and waste eliminated. Machine downtime has been reduced 2½ percent. Dipping machines have been speeded 39 percent." (Other examples of cost reduction were cited.)

6. Motor Castings Co.: "The union local sends us each year a letter of appreciation for its share in profit sharing. Our labor relaitons are definitely improved."

7. Pitney-Bowes, Inc.: "Increased productivity and morale. Prices have been held to within 40 percent of prewar."

Obviously, profit sharing can be a spur to productivity. It has enriched some companies and their employees. Others who have it could probably do just as well without it. How well it works depends mainly on management's willingness to lead.

Help Wanted

EXTENSION OF REMARKS
OF
HON. JOHN S. MONAGAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. MONAGAN. Mr. Speaker, despite all of the emphasis that is being placed on the ever-increasing need for more education and for bigger and better institutions of learning, there are still some areas to be explored if all of our qualified young people are to have the opportunity to gain this higher education. The question of money looms large to many youngsters, and I cite as a case in point the following article titled "Help Wanted," by Louis Sorriero, which appeared in the Hilltop, the quarterly publication of Southbury, Conn., High School—which, incidentally, is in my congressional district.

Louis Sorriero was graduated from Southbury High School last June and anyone who will take the time to read his article will clearly understand the very real nature of the problem this young American faces in his striving for a college education—an education which will at least help make him competitive with the more fortunate youngsters who have no such financial problem.

It is not to be doubted that the situation confronting this young man in Southbury, Conn., is compounded many thousands of times over throughout the country. And it is a situation which should give us pause, for who knows what future great educator, doctor, industrialist—or future Member of this distinguished House of Representatives—might come from the ranks of those young Americans whose only deterrent to a well-rounded education is the lack of sufficient funds with which to procure it. I commend the reading of this article to all thoughtful people:

HELP WANTED

(By Louis Sorriero)

My main ambition throughout high school has been to go to college. If I can go there and graduate, I hope to become a teacher. This ambition would be easily within my reach if it were not for one problem: getting adequate means to finance my way through college for 4 years.

I have tried to solve this problem by working at odd jobs after school and during vacations. The choice of such jobs, especially after school, is limited. Now, as a senior, I have one of the better jobs available to high school students. I work at a supermarket after school and all day Saturday. It enables me to save money for my college expenses, but it has its disadvantages.

One of the more serious disadvantages is the loss of time in getting to my job and getting home afterward. I cannot afford to buy a car because the cost of even the cheapest model would take too much out of my savings. As a result, the only way I can get to and from work now—a distance of 10 miles—is by hitchhiking, a slow and undependable means of transportation. Often I get to work late—even more often I get home very late.

This situation has a very direct bearing on my schoolwork; and that, in turn, affects my chances of getting into college. There are times, especially when I have to walk home, when it is impossible for me to do my homework. By the time I have washed and eaten, it is too late and I am too tired to study.

I am not presenting this situation just because it is a problem I face. I feel that it is worth considering because many students face the same situation. They must earn money to pay their way through college: but in earning this money, they lessen their chances of being admitted. The after-school job is absolutely necessary to the student who lacks means; but every hour this student puts into his job is an hour taken from studying his subjects and doing his homework. This soon shows up in his marks and in his tests for college. Before long, these grades fall below the standards required for admission to the college of his choice or for any college. All the work the student has done to earn the money for a college education is wasted because by working to earn this money, he has lost the time he needed to get good grades.

The students who face this problem are not the only ones who should be concerned about it. We are always hearing about the shortage of highly skilled men and women in this country, the need for teachers, doctors, and scientists. If our Government is truly interested about developing these skilled men and women, why doesn't the Government do something about it?

This problem of the needy high school student could be solved much the same way that it is being solved for college students. Scholarships and loans could be made available to high school students who need and

deserve them. This would give many students the time they require for their homework and the opportunity they now lack to show that they are college material. Some system could certainly be worked out to make sure that such help goes to earnest students and is not wasted on those who do not deserve it.

If a student is college material and is deprived of a higher education or a chance to get it, he will not be the only one who suffers. Our Nation, too, will suffer a loss—and, ultimately, such losses may endanger our free and democratic way of life. Those who recognize this possibility and the need for well educated people should do something to provide the means to develop them.

Ford Town, U.S.A., Flora, Ill.

EXTENSION OF REMARKS
OF
HON. GEORGE E. SHIPLEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. SHIPLEY. Mr. Speaker, next month an unusual event of great significance will take place in Flora, Ill., one of the cities in my district.

For 3 days this fall, from September 25 through September 27, Flora will change its name to "Ford Town, U.S.A.," and will become the focal point for a most unusual sociological experiment when the Ford Division of Ford Motor Co. supplies every vehicle owner in the community with a new 1961 model Ford car or truck to test drive for a week.

The event will serve as the national press preview of Ford's 1961 model cars and trucks and more than 1,500 vehicles—worth $3 million—will be involved.

I think my colleagues would like to know more about this program as it symbolizes the efforts being expended by countless small communities throughout the country who are progressive and who want to attract new businesses to their communities.

The citizens of Flora love their community and their way of life. They are determined to attract new industries to their town so that future generations raised in Flora will have solid, good paying jobs to step into when they complete their high school and college educations. They realize that towns which do not move forward in this area usually suffer stagnation and population losses to other, more progressive, communities.

They realize that one of the best ways to attract new industries to a community is to publicize the town's advantages over other competing communities and to have readily available answers to questions that businessmen raise when they are seeking out new plant site or business locations.

So it was natural that the people of Flora wholeheartedly welcomed Ford division's plan to convert their city into "Ford Town, U.S.A."

Flora had already received some national recognition because of its proximity to the new population center of the United States, and its citizens were looking for ways to capitalize on this obvious advantage.

They knew, too, that two main lines of the B. & O. Railroad bisected their town in both north-south and east-west directions and that there was a good balance of agricultural and manufacturing activity in the area divided principally between clover seed, soybean, and pea crops on the one hand and shoe manufacturing, steel products, oil, rayon garments, and dairy products on the other.

Consequently, at a Flora Chamber of Commerce dinner on May 10, when Ford division and Flora's mayor, the Honorable Norman Bryden, jointly announced a unique plan to unveil and test 1961 model cars and trucks in their community, the citizens of Flora responded wholeheartedly.

The community's daily newspaper, the Flora News-Record, heralded the event with characteristic enthusiasm as did all the other media in the area.

Even competing car dealers got into the act with pledges of cooperation in the venture. Several even volunteered to display new model Fords in their showroom windows if their colleague, the Ford dealer, would reciprocate when it came time for them to introduce their respective new 1961 lines of cars and trucks.

This gesture, probably unparalleled in the history of the automotive business, is typical of Flora's merchants and small businessmen who are more than willing to sacrifice personal gain for the good of their community.

On the basis of a secret survey conducted before anyone was told of Ford's plan, the management of Ford division already knows the preferences of each car and truck owner in the community. Thus on Saturday, September 24, when the cars are distributed, the preferences of each car or truck owner will be met. To dramatize the visual impact of 1,500 additional cars and trucks in a community the size of Flora, each car will be painted white and each truck blue.

I was interested to learn that the local Chevrolet dealer will make a 14-acre wheat field available to Ford officials so that the cars and trucks can be lined up systematically for distribution.

The Flora program will give the Nation's news media a preview of the 1961 Ford line and an opportunity to observe an entire community's reaction to the new models.

It will be provide Ford with an unprecedented preintroduction consumer test involving hundreds of typical car and truck owners.

It will dramatize the social and economic roles played by cars and trucks in a community's life.

It will test the effect of doubling the vehicle population on streets, in parking areas and on the community in general.

The large influx of visiting newsmen from the country's wire services, newspapers, magazines, radio and television stations and networks, to say nothing of visiting Ford officials, will give the citizens of Flora some indication of the city's ability to feed and house a large influx of visitors such as they can expect when new industries realize the advantages of this typical American town as a site for their businesses.

Equally important to the town's future will be the mass of information being accumulated about the city and its inhabitants by an IBM Ramac 305 electronic brain which has been installed in Flora by International Business Machines Corp.

Vital statistics about the city and its residents will be fed into the electronic brain in the most extensive analysis of its kind ever undertaken.

Life in Flora will be an open book to any potential businessman or manufacturing facility wanting to know about the town.

Ramac's education on Flora will be accomplished by feeding it the results of the initial survey of every car and truck owner, a second survey after citizens have had an opportunity to test drive the new Ford cars and trucks, the results of the 1960 census, and research on Flora's history and way of life from all available sources.

University sociologists will be using the results of the Flora project as a case history study for years to come and undoubtedly many worthwhile recommendations about the city's future will emerge from these studies.

Even as I speak today, various citizens' committees appointed by Mayor Bryden are hard at work preparing their city for this massive program. Clean-up, fix-up, paint-up activities are the order of the day.

I heartily congratulate my constituents in Flora for their zeal, their energy, their self-sacrificing determination to make their town a better place for the youth of their community to live in and work in.

I am indeed proud to represent these folks here in Congress. It is my sincere hope that their efforts will bear rich fruit in the years to come, and I invite all who are looking for a fine community in which to locate to investigate Flora, Ill., in the heartland of these United States.

Miss Jane Addams and Mrs. Alfred D. Kohn

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. YATES. Mr. Speaker, 1960 marks the 100th anniversary of the birth of Jane Addams, one of the great ladies in American history. The century since her birth has seen one of the great changes in our national life, and great changes in the world. Some of these changes have been good, others have not. Many of the changes for the better can be attributed to the work of

Jane Addams. This is particularly true for the Nation's working people.

In 1889 Jane Addams chose to make her home in the slums of Chicago because she realized that the rapid industrialization in this country, as in others, was exacting a fearful toll from the underpaid and overworked men, women, and children, who filled the factories of the large cities. She wanted to understand the problems of these people, and through that understanding, contribute something to the amelioration of the pitiful conditions she found all around her. She succeeded. Hull House became a social center where working people could come to participate in the finer things in life which they could not provide for themselves out of their pitiful wages. But Jane Addams soon came to realize that the problems of inadequate wages, cruelly long hours, woman and child labor, housing, and sanitation were too great to be solved by the isolated individual.

Jane Addams became their good friend and their champion in their struggle to organize and to bargain with employers for decent hours and wages. In the great Pullman strike in Chicago she was one of a few citizens who attempted to settle the controversy by means of peaceful negotiation and arbitration. She also helped to organize the women who worked in the sweatshops so that they could free themselves from the 100-hour week.

However, some of their problems were beyond the powers of such organized groups. These problems required the action of the whole society through its laws. Through the efforts of Jane Addams, the Legislature of Illinois passed a number of laws, including a child-labor law, a law regulating the hours which women could be compelled to work, a tenement inspection law, and a factory safety law. She was also one of the leading advocates of woman's suffrage. The residents of Hull House were responsible for the Nation's first juvenile court and the establishment of the Children's Bureau in the Federal Government.

Some of the legislation advocated by Jane Addams was not put into effect until after her death. One of the most important of these is the Social Security Act which is now providing retirement protection to millions of America's workers.

The debt we owe to Jane Addams cannot be measured only in terms of the specific legislation and reforms for which she was responsible. She, as much as any other, is responsible for making the public aware that the problems of the working people are the problems of the Nation, and that the future of the democratic system of government depends upon its ability to meet these problems as they arise.

Much of Miss Addams' greatness, too, lay in her ability to attract competent, understanding, devoted people to her side and to her cause. One of these, still active in the work to which the Addams group was devoted, is Mrs. Alfred D. Kohn, who was recently honored by the Jewish Community Centers of Chicago as a recipient of its Golden Age Hall of Fame Award. At the dinner at which the award was bestowed upon Mrs. Kohn, she was introduced by Mrs. Helen M. Oppenheimer who set forth the many magnificent accomplishments of Mrs. Kohn over the past six decades. Her address is as follows:

For more than 50 years Mrs. Alfred D. Kohn has represented the very finest in citizen participation in the broad field of health and welfare in her city, her State, and her country.

Following her husband's death at the turn of the century, Mrs. Kohn resided for many years at Hull House where the immortal Jane Addams was head resident. At Hull House, Mrs. Kohn was in charge of children's activities and camp work, organized the recreation program, initiated and raised funds for a trade school for girls leaving public school for employment, finally persuading the Chicago School Board to institute such a program in the school system. As a member of the board of the vocational supervision league she helped develop the public school's vocational guidance program.

Mrs. Kohn was an active trustee of the Chicago School of Civics and Philanthropy and assisted in effecting the merger with the University of Chicago, the first school of social work to be incorporated into a university as a professional school offering graduate education.

Mrs. Kohn served as a director, vice president, and president of the Jewish Social Service Bureau from 1921 to 1941. She was a member of the Women's Board of the Jewish Federation and at one time chairman of the Social Service Board of Michael Reese Hospital. For many years she was on the board of the Jewish vocational and employment service and was instrumental in organizing the workshop for handicapped persons. She served as board member and later as president of the board of scholarship association for Jewish children.

For many years, Mrs. Kohn was active in the legislative field and organized support and lobbied successfully for ratification of the Federal child labor amendment, the 8-hour law for women and children, a division for women and children in the Illinois Department of Labor, the industrial home-work law, the minimum wage law for women and children and the maternal and child health act.

Governor Emerson appointed her on the Illinois Commission of Child Welfare Legislation set up to codify Illinois laws, and Governor Stevenson appointed her on the advisory committee to the State Training School for Girls at Geneva. For 20 years, Mrs. Kohn served as a member of the advisory board of the Cook County Department of Public Welfare.

She was three times a delegate to the White House Conferences on Child Health and Protection, and in 1935, a delegate to the Pan-Americaen Conference on Child Welfare.

Following World War I she attended with Jane Addams the peace conference under the auspices of the International League for Peace and Freedom and in 1929 visited Russia with Julia Lathrop, U.S. correspondents and others.

Today, keen and alert, Mrs. Kohn serves as chairman of the Social Service Committee, a member of the board of School of Nursing of Cook County Hospital, is a member of the auxiliary committee of the University of Chicago Clinics; is a very active member of the advisory committee to the Chicago Housing Authority of the Welfare Council of Metropolitan Chicago; a member of the board of directors of Central Service for the Chronically Ill of the Institute of Medicine of Chicago, and was made a citizen fellow of the institute in 1957 in recognition of her work.

In 1953, Mrs. Kohn received the Illinois Welfare Association award for outstanding achievement and distinguished service in the field of social welfare and civic affairs.

We have cited only the highlights of her many years of devoted service which have benefited our community in so many fields and for which we wish to express our deepest gratitude today.

This is the woman we gather here to honor.

We indeed consider it a privilege to add to her list of achievements as we call upon her to receive this Golden Age Hall of Fame award.

Mr. Speaker, Mrs. Kohn's response recaptures the exciting, crusading fervor with which the Addams group of ladies carried on their activities. Mrs. Kohn said:

Mrs. Oppenheimer and friends, no one can accomplish things alone. I was fortunate in having had help from many people—among them three Governors—Emerson, Stevenson, and most of all from Governor Horner.

I feel greatly honored to receive a citation from the Jewish Community Centers of Chicago. Their establishment as an affiliate of the Jewish Federation exemplifies the changes that have taken place in the concept of philanthropy. Looking down the vista of a long life I can note the progress from amateur endeavor to professional organization, from the mere giving of relief for economic needs to improvement of attitudes and policies in dealing with complex problems.

I have recently returned from Rockford College, Jane Addams' alma mater, which was observing the centennial of her birth. The occasion brought back memories of my early days at Hull House at a time of heavy immigration, and my early activities at what was then the Jewish charities.

There was a large influx of Jewish families, victims of persecution, who crowded the wretched tenements around Hull House and who were the main concern of the Jewish organizations.

Living in the settlement, I felt very close to the people of the neighborhood and learned to understand their problems and their hopes in a spirit of friendliness. They found at Hull House help in learning a new language and in adjusting to city ways of life, and protection against exploitation. Their cultural and recreational needs were met with classes in literature, art, music, and handicrafts which relieved the monotony of the only jobs offered to newcomers. They also found appreciation of their worth as human beings.

One often wondered how much the participants in some of the classes really understood. I remember a Shapespeare class where some lively, but strange, discussions took place with criticism of the characters and the author for knowing so little about the realities of life. One young woman, who had been silent at all the meetings, at last spoke up and said, that the deadly monotony of sewing pants year in and year out was no longer intolerable because while sewing, the beautiful phrases from Shapespeare were constantly in her thoughts. Was this club not worth while?

Miss Addams did not tell the residents what to do. She believed that, once they knew the neighborhood, they would find out the needs for themselves. Though I was inexperienced when I went there she did not direct me but left me to discover what I wanted to do and what I could do. For example, I came to know Italian children in the neighborhood who worked far into the night making paper flowers, falling asleep in school the next day.

In this way I learned the need for child labor legislation for which I lobbied successfully with much help from Governor Horner.

And yet Miss Addams recognized that good will was not enough in dealing with complex problems and with her colleagues conceived the idea that training of social workers was essential. She helped to found the Chicago School of Civics and Philanthropy of which I was a trustee and which later became the School of Social Service Administration of the University of Chicago. Now social work has become a recognized profession whose graduates have degrees comparable to those in the departments of law and medicine.

Living at Hull House for many years was an inspiring experience and an education in human relationships. The creative and pioneering personality of Jane Addams attracted associates who represented much of the intellectual and cultural life of this and other communities.

I believe it would be appropriate at this time and before this audience to gain inspiration by a brief review of the contribution to human welfare made by our greatest citizen whose centenary the whole Nation is celebrating. If I were to enumerate them all, it would fill many pages. She had the courage to sponsor causes which were then unpopular but which are now accepted, such as woman suffrage and efforts on behalf of peace and total disarmament, for which she later received the Nobel Peace Prize.

I had the great privilege of working with her in many of her efforts for social betterment. Her friendship was not limited to any group or class. She believed in voluntary organizations such as yours, as well as active support of public institutions.

The problems in the field of public welfare are never solved. May we have the courage to follow where she led.

Whereas the settlements of those days were designed to help only the most underprivileged and economically depressed, the community centers of today recognize that the desire for recreational, cultural, and social opportunities is common to all groups—the well-to-do as well as the poor.

Your organization gives recognition to this new concept in a very generous and effective way.

I again thank you for honoring me with this citation.

Mr. Speaker, I know I express the sentiments of the entire Chicago community in paying tribute to one of Jane Addams' first ladies, Mrs. Alfred D. Kohn, for her long and inspiring service in the cause of social progress, and in wishing her many more years of health and continued public service.

National Forest Parks: A New Concept in Recreational Development

EXTENSION OF REMARKS

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 25, 1960

Mr. ULLMAN. Mr. Speaker, last month I made a proposal at a meeting of the National Outdoor Recreation Resources Review Commission, of which I have the honor and distinct pleasure to be a member. My proposal included the suggestion of a system of national forest parks. This idea has been received with widespread interest. In order to expand somewhat on the thinking which underlies my proposal, I have prepared the following rather brief and informal statement. I will welcome comments and discussion of this concept by my colleagues and by the public and hope that from such a discussion may come more adequate management of our great national recreation resources and new doors into our great outdoors for millions of Americans.

The statement follows:

NATIONAL FOREST PARKS: A NEW CONCEPT IN RECREATIONAL DEVELOPMENT

The average American looking forward to a summer vacation in our great outdoors usually thinks in terms of Yellowstone, Yosemite, Estes, or our other national parks. He knows little about those vast scenic areas of his country centered in our national forests. Because of my conviction that the recreational potential of these areas has great national significance and should be fully developed, I have proposed to the National Outdoor Recreation Resources Review Commission a system of national forest parks. My proposal presented at the Joint Commission-Advisory Council meeting in Jackson, Wyo., on August 2 called for: (1) Establishment of a system of national forest parks within the national forest system, (2) zoning of national forests into three primary zones, (a) full multiple use, (b) limited use wilderness, (c) limited use national forest parks, (3) creation of a national forest park administrative division within the Forest Service.

A fourth recommendation, broader in nature, called for the establishment of a position of National Resource Coordinator under the President to assist him in much needed policy coordination in resource matters. My remarks here will be confined to the national forest parks proposal.

Although the Forest Service has adopted an accelerated recreational development program, its emphasis has been almost entirely based on the expedient development of camp site areas to handle visitation pressures. There has been little, if any, thought concerning the development of nationally significant areas under an integrated concept of park management.

My proposal for the establishment of national forest parks is based upon the conviction that the recreation potential within the Forest Service can only be fully developed through recognition of nationally significant units and through the intensive and integrated development of such units under a park system of management. I believe that such a plan is wholly within the scope and meaning of the multiple use concept which guides Forest Service policies. I am also convinced that such a plan is fully compatible with Forest Service statutes.

The key to such a plan would be recognition through zoning of nationally significant scenic areas within the National Forests. These would be given a separate identity encompassed in a well rounded and professionally conceived park plan with appropriate national recognition and promotion.

Another cornerstone of such a plan would be the recognition of the compatibility of multiple use management and Forest Park objectives. There is no reason why timber management, water protection, and other multiple use objectives should not be incorporated in the management plans of such parks. There would obviously be some limitations on other uses in the most intensively used recreation areas but these would encompass only a small portion of the park area.

Where wilderness exists in conjunction with nationally significant scenic areas, the national forest park and the wilderness zone should be integrated in their planning so as to accomplish full recognizition of the scenic potential of the area. Clearly, the wilderness concept should in no way be violated.

Minimum criteria would establish the standards for national forest park designations. The number of such parks within the national forest system would be determined in large part by those standards. There is no question, however, that within the national forests there are many such park sites. In my own congressional district, comprising approximately the eastern two-thirds of the State of Oregon, there are many, including the high Wallowas, Hells Canyon, Three Sisters, Newberry Crater, Lake of the Woods, and Mount Hood. At least two of these would include spectacular wilderness areas. At the present time the recreation potential of each of these is virtually undeveloped and their national significance little known.

A byproduct of such a system would be the relieving of the tension that now exists between the Park Service and the Forest Service. Such differences stem, for the most part, from the fact that there are many pressures to create national parks out of the most scenic national forest areas because that is the only present means of gaining unique national recognition and of obtaining full recreational development of those areas. The system I have proposed would allow for full development within the Forest Service, maintaining the management integrity, but at the same time allowing for national recognition and full recreational utilization.

I visualize this new concept as the next step forward in the recreation development of America's great scenic outdoors. It would give us sound recreational development within the framework of multiple use and would allow for maximum wilderness preservation while providing for full recreational use. It would relieve the pressure on our national parks and disperse the increasing visitations among new and equally appealing areas. It would open many new doors into our great outdoors for millions of Americans.

The Death Penalty Today

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 25, 1960

Mr. MULTER. Mr. Speaker, in connection with my bill, H.R. 870, to abolish capital punishment, I commend to the attention of our colleagues the following article by Hugo Adam Bedau as it appeared in the Christian Century of March 18, 1959:

THE DEATH PENALTY TODAY—A TIMELY SURVEY OF PREVIOUS ACCOMPLISHMENTS AND FUTURE PROSPECTS IN THE CONTINUING EFFORT TO PUT AN END TO A PRACTICE ANACHRONISTIC AND DEPLORABLE

(By Hugo Adam Bedau)

At its general convention in Miami last October the Protestant Episcopal Church adopted a resolution urging abolition of the death penalty. The resolution pointed out that each individual is sacred in the eyes of God, that innocent persons are sometimes convicted, that there is no proof that capital punishment has been a uniquely effective bulwark against crime, and that retention of the death penalty in the face of these con-

siderations is unjustifiable. The Episcopalians' action came after similar resolutions had been adopted last summer by the American Baptist Convention, the Central Conference of American Rabbis and the National Association of Social Workers.

Rejection of capital punishment by these religious bodies is no isolated phenomenon. It is rather the reflection of a rising tide which promises within the next few years to do away with the gallows, electric chairs, and gas chambers in many States. During the past few months many Americans have encountered persistent and reasoned pleas for the abolition of capital punishment and have for the first time given the subject serious thought.

THE ENDING OF A MYTH

The first effective blows against the death penalty in the English-speaking world were struck in Great Britain, where in the 30 years after 1807 the number of crimes for which the death penalty could be invoked was reduced from over 200 to 15. In 1847 the State of Michigan became the first governmental jurisdiction in the English-speaking world to abolish capital punishment for all crimes except treason.

In the ensuing years statistics on the rate of occurrence of formerly capital crimes in England and Michigan led all but the "hanghards" (as Arthur Koestler calls them in his "Reflections on Hanging") to abandon the belief that capital punishment is far more effective than imprisonment as a deterrent to crime. That hitherto firmly relied-on myth simply was not supported by the statistics. Its force has been further blunted by experience in the nearly 3 dozen countries and the other States (Maine, Minnesota, Wisconsin, Rhode Island, and North Dakota) which have abolished the death penalty since Michigan led the way.

Through the past century scientific penology has lent increasing support to the contention that rehabilitation of offenders, no matter what their offense, is not only possible but desirable, and that provision of adequate prisons and of asylums for the criminally insane protects society by preventing further crimes by persons adjudged to be beyond treatment. Capital punishment emerged at last in its true colors: at best, utterly retaliatory when applied to the murderer and harsh beyond any possible justification in cases of treason, rape, kidnaping, and other such crimes. It remains a symbol of all that is violent, vindictive, thoughtless, and futile in our attitude toward criminals and, in the end, toward ourselves. No wonder it provokes impassioned opposition. Despite the fact that fewer persons are being executed than formerly (in this country, the number dropped from an average of 167 during the 1930's to 128 during the 1940's to 74 in this decade), we should not let the practice fade away of its own accord; it should be deliberately stopped.

In England, it was argument along these lines that a decade ago led Parliament to create a Royal Commission on Capital Punishment. The commission was forbidden to consider directly whether the death penalty should be abolished; it was directed only to look into such minor details as, for example, whether electrocution is more humane than hanging (it isn't) or whether the M'Naghten rules defining criminal insanity ought to be revised, they should). But the commission did recommend a number of limitations on future use of the death penalty. Some of these recommendations (but by no means all) were incorporated into the Homicide Act of 1957. It is clear that save for the limiting directive the commission would have recommended immediate abolition of capital punishment, as had other such bodies in 1866 and 1930.

THE STATES TAKE ACTION

The work of the royal commission provoked a flood of publicity all over England. It was followed by a number of articles and books (the best of which is "The Offenders," by Giles Playfair and Derrick Sington), and by public debates and lectures. From the Commission's deliberations stems also the current wave of North American protests against the death penalty. In 1953 the Canadian Parliament undertook a study of capital punishment. In this country a number of interested groups led by the Society of Friends and the American League To Abolish Capital Punishment began to press for legislative action. Two years ago they won a measure of success in California, where, after hearing the report of a study commission, the legislature came up with a recommendation for complete and immediate abolition of capital punishment. This was, however, but a foretaste of what was to come in 1958.

Of the 18 States in which abolition bills were filed last year, Delaware scored the most spectacular success. In April Gov. Caleb Boggs signed into law a bill which abolished the death penalty for all crimes. Although no one had been hanged in Delaware in the previous 11 years, statutory repeal represented a giant step forward. Not since North Dakota abolished capital punishment over 40 years ago had the abolitionist cause been given such a lift.

A lesser triumph was achieved in Massachusetts. There, as in Delaware, there had been a virtual moratorium on executions in the past decade. Such a situation was no accident; it resulted from the constant vigilance of the Massachusetts Council To Abolish the Death Penalty. In 1957 that group got the legislature to appoint a study commission to consider capital punishment. Its lengthy majority report, completed at the end of that year, urged abolition. The recommendation is more significant than it looks on the surface, for through the past 30 years bills calling for an end to the death penalty in Massachusetts had been repeatedly smothered in committee.

However, 1958 saw a number of setbacks. The sharpest blow fell in Oregon, which had introduced abolition in 1914 and abandoned it 6 years later. Oregon requires a constitutional amendment initiated by public referendum before capital punishment can be abolished. In 1957 the legislature passed an abolition bill, Gov. Robert Holmes openly endorsed it, and it was placed on the ballot in the November 1958 election. In the preceding months the Oregon Prison Association worked vigorously to inform the public of the merits of the bill. But the proposal was defeated by 10,240 votes, about 2 percent of the total.

THE NEW JERSEY STORY

In New Jersey, the other State in which a major effort was made last year, the abolition campaign was unsuccessful. That State's experience deserves study, for it could be a foretaste of what can happen in States initiating their 1959 campaigns unless certain precautions are taken.

From January to April 1958 abolition bills which had been introduced into the New Jersey Assembly were ignored by the committee to which they were referred. Then, in response to public pressure, a hearing was scheduled for early June. When the day of the hearing arrived a number of authorities on capital punishment assembled in Trenton. They were there as the result of initiative taken by New Jersey Quakers through their newly formed committee on social order. As the hearing proceeded it became clear that the case against capital punishment was to enjoy articulate, informed, and comprehensive presentation, in contrast to the sincere but inadequate testimony given at a similar hearing in 1957. Moreover, the State's correctional officials, led by Commissioner John Tramburg, expressed their desire for immediate repeal of all capital statutes. Such public testimony by officials was practically unprecedented, though similar opinion is held by many of them. The hearings continued for a second day. Of the 24 persons who testified, all but 2 favored abolition. But there was a hitch: of the committee's seven members, five did not appear at the hearing, and only the chairman heard all the testimony. More damaging, no more than 2 or 3 of the other 74 senators and assemblymen were present at any point in the hearing.

In July, after the assembly had recessed, two Newark television programs carried debates on the death penalty; one was moderated by Gov. Robert Meyner himself. When the assembly reconvened in November the abolition bills received bipartisan sponsorship. But by adjournment time in December they had died in committee—as had similar measures in 1956 and 1957.

WHAT HAD GONE AMISS?

The chief reason for the ignominious end of the abolition bills in New Jersey is simple: the abolitionists had been too long unorganized and too impoverished to conduct the kind of comprehensive educational and publicity campaigns which would have won others to their cause. This lack led to other failures: (1) The members of the committee to which the bills were referred were not approached by the abolitionists. (2) No support was offered by persons in the higher levels of State government; Commissioner Tramburg and his subordinates who spoke up for the bills at the hearing made it plain that they spoke only for themselves. (3) The only Statewide organizations which lent their support to the cause were the New Jersey branches of Americans for Democratic Action and the Women's International League for Peace and Freedom. Except for the Red Bank Council of Churches, no church group and only a handful of Christian clergymen and laymen showed any awareness that the issue even existed. Active opposition was offered by the Police Chiefs' Association and the Patrolmen's Benevolent Association. (4) Of the State's urban newspapers, only the Bergen Evening Record came out against the death penalty. Their attitudes ranged from that of the Newark Evening News, which regarded abolition "at this time" as inexpedient, to that of the Hudson Dispatch, which called for more frequent use of the electric chair. (5) Although a few public debates and lectures were hastily set up over the State, none took place in the larger centers: Newark, Jersey City, Trenton, Camden.

The result of all this was that pressure on the legislature to repeal the laws permitting capital punishment was never more than sporadic. However, for the first time within memory the issue was met with something other than complete indifference.

It was not only as the result of the uncoordinated legislative attempts that the spotlight fell on capital punishment last year. A crop of criminal cases dramatized some of the most telling of the abolitionists' arguments. In July a man named Charles Rothschild confessed to a murder for which one James Foster was awaiting execution in Georgia. Foster had been convicted largely on the testimony of the victim's wife, who identified him in court as the killer, and the appellate court had upheld the verdict. It was miscarriages of justice like this that led Wisconsin, Rhode Island, and Maine to abolish the death penalty a century ago. The pious optimism that it can't happen now was rudely shaken by the Foster case. In September the Nation was shocked to learn that Jimmy Wilson, a Negro with a criminal record, had been sentenced to die in Ala-

bama's electric chair for stealing $1.95 from a white woman. Spurred by a deluge of letters and telegrams pleading for clemency, Gov. James Folsom commuted the sentence.

THE ISSUE IS DRAMATIZED

In November young Jack Chester, awaiting electrocution for murder in Massachusetts, hanged himself in his cell 3 days after Gov. Foster Furcolo finally decided to commute his sentence on grounds of insanity. So far as the courts which tried him were concerned, Chester was sane, fit to stand trial, fit to be executed. Thanks to the McNaghten rules defining insanity, they had been obliged to ignore what psychiatrists did not: that Chester had pleaded with the jury to have him put to death and that he had been subject to suicidal tendencies and a pathological guilt complex since childhood. The sentencing of Chester, like the court decisions in the Foster and Wilson cases, illustrates the impossibility of achieving justice under the rules of a penology whose cornerstone is the death penalty. And such cases occur year after year.

During the year the entertainment industry dramatized the evils of the electric chair and the gas chamber. Television programs in Los Angeles ("Thou Shalt Not Kill") and in New York ("The Sacco-Vanzetti Case") were followed by a nationwide "Omnibus" program in which, with Boston Attorney Joseph Welch as guide, viewers were thoroughly exposed to the issue. In candor and accuracy the program set a high standard, and it was widely applauded. More controversial was the motion picture "I Want to Live," whose plot was based on the trial and 1955 execution in California of Barbara Graham. Its dramatic power was heightened by the implication that Mrs. Graham was innocent. Because of its affecting climactic scenes portraying action in the death house, this film—along with the "Omnibus" presentation—performed a useful purpose in bringing home to Americans the horror which surrounds the practice of passionless, deliberate killing of offenders in the name of the state, and in reminding us that capital punishment is administered in our name and that we have the power, through our legislatures, to bring it to an end.

What is the forecast for 1959? Perhaps other church groups—the Methodists, the Presbyterians, the Lutherans—will join the Episcopalians and American Baptists in repudiating the death penalty. The Massachusetts and New York councils of churches have done so. We can expect the American League Against Capital Punishment, under the vigorous leadership of its president, Donal MacNamara of the New York Institute of Criminology, to become more active and more widely known. Statewide abolition societies like those now operating in California, Connecticut, Illinois, New York, and Tennessee will be organized or reactivated. Abolition bills are being considered in California, Connecticut, Illinois, Indiana, New York, Ohio, and Tennessee. In some of these States study commissions will be established and/or public hearings conducted this spring. The Governors of California, Florida, Ohio and Tennessee have appealed to the legislatures of those States to pass abolition bills this year. There is even hope that the powerful American Correctional Association and the National Probation and Parole Association will lend suuport to the movement. When Alaska was admitted to statehood it became the eighth State with no death penalty, having repealed its caiptal statutes in 1957. Hawaii, Puerto Rico, and the Virgin Islands have taken similar action.

We are off to an excellent start. But there are sobering considerations which should alert those who expect abolition of capital punishment to come automatically within the next few years. Bills have been introduced into Congress which would define the bombing of buildings used for religious purposes as a capital offense. In many States there is continuous pressure to make certain sex and narcotic offenses punishable by the death penalty. Trends in penology, evidence from psychiatry and criminology, practical experience, and the counsels of morality all argue against retention of capital punishment. But how long it will survive depends on how much longer those who are aware of its evils will tolerate it in their midst.

COMMENT ON THIS ISSUE

In many of the States this year legislators are debating the merits of capital punishment as proposals for its abolition or alteration come before them. Just now the Chicago newspapers are bringing the issues before us graphically as the Illinois Legislature considers a measure which would initiate a trial period during which the death penalty would be suspended. The article in which Hugo Adam Bedau of Princeton University's philosophy faculty surveys past successes and failures of advocates of abolition is therefore most timely. In this connection, we suggest that readers review the Ohio experience as reported by a contributor to our "Letters to the Editor" department in the February 25 issue (page 237).

Happy Talk

EXTENSION OF REMARKS

OF

HON. JOHN V. LINDSAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 29, 1960

Mr. LINDSAY. Mr. Speaker, I hope that no one missed reading an article that appeared in the drama section of Sunday's New York Times, by Arthur Gelb, entitled "Happy Talk." It is about the late Oscar Hammerstein and his work. With the permission of the House, I am extending in the RECORD the full article.

I also hope that everyone saw John Crosby's piece in this morning's Herald Tribune about Oscar Hammerstein. It is a moving tribute:

HAPPY TALK—SINCERITY OF THE LYRICIST'S PERSONALITY GLOWED IN HIS WORK FOR THE STAGE

(By Arthur Gelb)

Not long after "Oklahoma" exploded on Broadway, revolutionizing the concept of musical comedy, Oscar Hammerstein 2d inserted an advertisement in the trade newspaper, Variety. It read: "I've done it before and I can do it again," and listed five flops for which he had been partly responsible in the recent past. A man who believed firmly that dreams came true, that love conquered all and that virtue triumphed, Mr. Hammerstein did not quite trust his luck; it was his way of knocking wood.

Although he did, inevitably, "do it again," he also contrived, within the ensuing 8 years, to collaborate with Richard Rodgers on three more spectacularly appealing and more or less convention-shattering musicals, all of which, like "Oklahoma," have since taken their place as classics of the American musical stage. In a final accounting, which includes "Oklahoma," "Carousel," "South Pacific," and "The King and I," there is no question that the flops will be forgiven.

The time for such an accounting is now unfortunately at hand. Mr. Hammerstein's death last Tuesday, at the age of 65, has put an end to 38 years of happy talk—set, in nearly a thousand songs, to the music of Rudolf Friml, Sigmund Romberg, Georges Bizet, Jerome Kern, and Richard Rodgers.

UNIVERSAL APPEAL

In throwing out the simpleminded song-and-dance formula of the Twenties and Thirties, and substituting a format in which song and dance were an integral part of the book, Mr. Hammerstein, abetted by Mr. Rodgers, began turning the medium of musical comedy into folk art in 1943. Desperately sincere and right-minded, he managed to imbue his books and lyrics with a combination of simplicity, romantic optimism and gentle social consciousness that had a universal appeal. The sincerity of his personality glowed with a bright, golden haze in his work for the stage and brought the audiences flocking. To the majority of his professional colleagues there was a sense of reassurance in his great popularity.

"Oscar Hammerstein was content to say what he thought, simply and clearly and sympathetically, without the spurious adornment of what passes for sophistication," one fo his contemporaries, S. N. Behrman, said on the day of Mr. Hammerstein's death. "He was, to quote his own lyrics, 'as corny as Kansas in August,' by which I mean that he was genuine where others were clever, understanding where others were superior, kind when kindness was needed. He was strong and balanced and sensitive. He had the basic virtues. His contribution to the American theatre was immense, and as much a contribution of personality as of technique. That is why his lyrics are known and loved by millions—because they are a reflection of that singular personality."

BROADWAY ANOMALY

The personality, whose image is permanently captured in the sunny "Oklahoma," the bitter-sweet "Carousel," the poignantly sentimental "South Pacific" and the delicately romantic "The King and I," was an anomaly in the brittle world of show business, where, to score a hit, often means to score it at someone else's expense.

Mr. Hammerstein felt no need to step on anyone's toes, either personally or professionally. The same quality of unaffected decency that governed him in private life impelled him to celebrate on stage the uncomplicated emotions of people who dreamed and loved and sometimes stumbled, but whose hearts, like his, were in the right place.

Not only did he eschew all the mean-spirited stereotypes that were the staple butts of early musical-comedy humor—the stage Irishman, Jew and Negro—but he even attempted, with evangelical fervor, to preach mild sermons of spiritual and racial tolerance; his rueful plea for understanding, "You've Got to Be Taught," from "South Pacific," exemplifies his point of view; perhaps its philosophy is elementary, but incorporating into a Broadway musical such a direct tract about the color of a person's skin was a remarkable thing for a lyricist to do. Mr. Hammerstein wrote his exuberant songs of goodwill with a candor and clarity that went straight to the hearts of millions.

EARLY INFLUENCES

Mr. Hammerstein had two grandfathers to thank for his special blend of theatricalism and euphoria. The first Oscar Hammerstein was a celebrated vaudeville impresario with a compulsive urge to produce opera; he made vaudeville pay sensationally well but he fell on his face with opera. Oscar 2d followed closely on the heels of his grandfather, with one notable exception. He made the song-and-dance musical pay sensationally well during the twenties—as witness "Rose Marie," "The Desert Song," and "Show Boat"—and when, after a period of doldrums, he turned to American folk opera, he made that pay, too.

His maternal grandfather, James Nimmo, furnished the sunshine. Mr. Nimmo was Scottish, but not dour. A retired insurance man with whom Oscar 2d spend a good deal of time in his early childhood, Mr. Nimmo fed the boy sour balls and milk punch spiked with Scotch for breakfast, and taught him, during early morning rambles in the park, that the Devil was a kindly old man with an inexhaustible supply of candy. Mr. Hammerstein did not mind acknowledging that his healthy point of view toward life sprang from his pleasant experiences with the Devil and Grandfather Nimmo.

Perhaps it was also Grandfather Nimmo who passed down to him the unaffected modesty that made him one of the best-loved and least-envied figures in show business.

MODEST FORMULA

Describing his early efforts to learn what constituted a successful book for a musical, Mr. Hammerstein once recalled the formula that had been explained to him by Otto Harbach, and to which he modestly continued to subscribe:

"[Harbach] likened the elements of acting and dancing and all the other parts of a musical play to the ingredients that go to make a fire—logs, kindling, matches, a good fireplace, etc. All these ingredients, he said, are necesasry, but they won't make a good fire unless they are properly assembled. * * * When everything works—logs crackle and the bark sputters, when the blue and gold flame waves and flies toward the chimney and sends out warmth and good feeling to cheer a room full of people, it is because some plodding, perhaps not very brilliant fellow, knows how to put one log on top of another in just the right way."

Mr. Hammerstein knew a good deal more than that. It took something more than plodding to bring the American musical stage to its present state of eminence. It needed the cheerful fires Mr. Hammerstein built.

What Every English Child Should Know About Washington, D.C.

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 23, 1960

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present for your information, and the information of my other distinguished colleagues, the text of an article appearing in the August 1960 issue of the American Bar Association Journal by Hon. Emory H. Niles, chief judge of the supreme bench of Baltimore City:

WHAT EVERY ENGLISH CHILD SHOULD KNOW ABOUT WASHINGTON, D.C.

(By Emory H. Niles)

Few Americans know much about the city of Washington; it may be assumed also that even fewer Englishmen learned about it at their mothers' knees. It is therefore obviously desirable that the English guests of the American Bar Association be given at least a dim, even if in some respects misleading, account of the city which is playing host to what is probably the largest gathering of Anglo-American lawyers ever held anywhere. In a spirit of helpfulness, therefore, these few words are offered as a syllabus, or headnote, to the full opinion which any court of competent jurisdiction might render on the grandeurs and miséries of the American National Capital. Let us proceed therefore, historically and analytically, in the footsteps of Sir Matthew Hale, Pollock and Maitland and Austin.

Historically, the Capital owes its existence to two principal forces. The first was the jealousy between New York, Philadelphia, Baltimore, and other cities, all of which desired the honor of being the "seat of the general government." The second was the fear, not that the Government might be overawed by a pseudo-Roman or Parisian mob, but the reverse, viz, that no State or other local government would be strong enough to protect the National Government—a fear based on the recent experience of the Continental Congress which, in 1783, while sitting in Philadelphia, was threatened by mutinous soldiers of the Continental Army who demanded their pay and marched upon the hall in which Congress was sitting. At that juncture both the city authorities and the authorities of Pennsylvania appeared to be too weak to protect the Congress, which hastily adjourned, first to Princeton and then to Annapolis. After a great controversy it was decided to locate the Capital on the Potomac River, far from any city or any State capital, in an area central to the whole country, and subject to the exclusive control of the Federal Government, where that Government itself could make provisions for its safety.

Constitutionally, the size of the District of Columbia was fixed by the Constitution, which provided that Congress should have power "to exercise exclusive legislation in all cases whatsoever" over a district not exceeding 10 miles square, which should become the seat of government. Curiously, nothing is said about executive or judicial powers. Nothing is said about citizenship or the right to vote. Actually, Congress governs the District of Columbia through three Commissioners and has withheld the right to vote from residents of the District, many of whom now clamor for that right. Legally the District is for some purposes a state and for some purposes not a State.

Geographically, the District is not a square, 10 miles on a side. The original district laid out under George Washington's supervision was such a square, about half in Maryland and half in Virginia. The Virginia half extended to Alexandria, and included the land on which the Pentagon now stands. But the law provided that the public buildings for the Federal Government should be built on the Maryland side, and, as a result, the Virginians became dissatisfied. In 1846, therefore, Congress retroceded the southern half of the District to Virginia. This act, which accounts for the present unsymmetrical shape of the District was according to one writer, "the wickedest blow ever struck at the grandeur and majesty of Washington."

THE CITY'S ARCHITECT PIERRE CHARLES L'ENFANT

Topographically, the city of Washington owes its plan to a Frenchman, Pierre Charles L'Enfant, who was employed to design a capital city in what was then almost uninhabited farm, forest, and swamp land. L'Enfant was a gifted man. He had studied the plans of Frankfort, Karlsruhe, Paris, Turin, Bordeaux, and other cities. He had the full backing of both Washington and Jefferson, but the task was great; jealousies were strong; and the beginnings were slow. L'Enfant was a proud and difficult man to deal with; he finally resigned. During the 19th century his plan was neglected, but in 1901, under President Theodore Roosevelt, it was revived and restored, so that the present city is essentially an enlargement of that envisaged by L'Enfant.

The innocent Englishman whose mother failed to instruct him with respect to the street plan of Washington may have some difficulty with it; but it is in essence very simple. His first act, whether he needs petrol or not, is to go to a "gas station" and obtain a map (free). From it he will see that the city is divided into four quadrants, northwest, southwest, northeast, and southeast. The White House, the American Bar Association headquarters hotel, most of the other hotels, and the principal shops are in "northwest." The primary street plan is the standard American gridiron of rectangular squares. But superimposed upon these rectangles is a pattern of avenues running diagonally. The intersections of these two patterns or networks form squares and circles. All the streets running east and west are lettered; all the streets running north and south are numbered. All the avenues, running diagonally, are named for States.

There are two great foci: The Capitol and the White House. The Capitol is at the assumed center of both the numbered and the lettered streets, and the White House is connected with it by Pennsylvania Avenue, "The Avenue," running diagonally from southeast to northwest.

There is also a great axis: The Mall, running east and west from the Capitol to the Lincoln Memorial, with the Washington Monument in the middle. On the north side of the Mall is Constitution Avenue, which should be B Street NW.; and on the south side is Independence Avenue, which should be B Street SW.

A subsidiary axis is 16th Street, running north from the White House. The headquarters hotel is at 16th and K Street NW. Automatically, one knows, then, that when there he is 16 "blocks" west of the Capitol, and five "blocks" north of the White House, and 11 "blocks" north of the center of the Mall.

The White House was named because of a matter which may have been known to those English mothers, but which they delicately refrained from explaining to their sons. After the Red Coats had burned the public buildings in 1814, the "President's Palace" was charred and blackened. To restore it, it was painted white. And although its official name for many years was the "Executive Mansion," it is now officially named the "White House."

WASHINGTON ARCHITECTURE—A GREAT FREE-FOR-ALL

Architecturally, Washington is a great free-for-all. Those Englishmen whose mothers taught them that architecture is a living, throbbing expression of contemporary life, which should not imitate the dead styles of the past, will be disappointed by the great piles of limestone and marble forming the Federal triangle between Pennsylvania Avenue and the Mall, not to mention the earlier buildings such as the Treasury and the Old Court House.

Those Englishmen whose mothers taught them that rectangular blocks of glass, steel, aluminum and plastic do not represent all beauty and all art, and are not necessarily "exciting," will be happy to bask in the shadows of respectable conglomerations of classical elements thrown together to make such buildings as that of the Supreme Court.

Those who prefer the beaux arts may admire the Library of Congress; and those who are convinced modernists may admire the headquarters buildings of several trade unions. As in other areas of the arts, "you pays your money and you takes your choice."

Whatever that choice may be, the same mothers would undoubtedly have approved of the trees which line the Washington streets, and the green spaces which punctuate them, soften and embellish hard geometrical lines, and give some relief from the heat and glare which happily do not afflict London.

WASHINGTON CLIMATE IS INDEFENSIBLE

Climatically, Washington in August cannot be defended. It is hot and it is muggy. If those English mothers did not advise their sons to wear cotton drip-dry suits, it could only have been through excusable ignorance. The advice now offered to every guest is to go straight to a department store and buy a drip-dry suit, made of cotton or a mixture of cotton and synthetic fiber, and at least two shirts of the same. Be sure to get a mixture, not an all-synthetic fabric. The man-in-apron can devise ways of washing these garments. And if he wears them while not wearing his apron, he will be less uncomfortable. A summer tuxedo, anglice white cotton dinner jacket, is also desirable. It is doubtful whether more than a handful of Englishmen could survive an American Bar Association dinner in woolen dinner jackets. Air conditioning at the hotels will help, but the journeys between hotels are deadly.

SOCIAL WASHINGTON IS COMPLICATED

Socially, Washington is complicated. An outsider like the author, even though his mother was American, is incapable of understanding it or of explaining it. Let it be noted that the various strata include the official, the diplomatic, the political, the bureaucratic, the plutocratic and the non-U circles. Glimpses may be had into any or all of these areas, but the English explorer must rely on his own gun and camera to protect himself and his lady. The Washington police are efficient, but the English visitor must not expect miracles such as are performed by their own bobbies.

Finally, it may be said that Washington has in the lifetime of most of the hosts at this meeting, been transformed from a rather ragged, partly down-at-the-heel, medium-sized town into a capital city which has all the elements of future greatness—a city which welcomes its English visitors, and in which it is hoped that the unavoidable lacunae in their earlier education at their mothers' knees may be hospitably remedied.

South Dakota Republican Convention Action an Insult to REA and Farm Families

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. McGOVERN. Mr. Speaker, South Dakota farm families and friends of the rural electric program everywhere were shocked by the recent action of the South Dakota Young Republican State convention when the delegates voted to kill a resolution congratulating REA on 25 years of service to rural America.

The delegate who offered the motion to kill the REA resolution referred to "the socialistic" philosophy of REA and the South Dakota REA newspaper, the Highliner.

It is hard to imagine a more unjust insult to the farm families who own and operate both the rural electric systems in South Dakota and the REA newspaper which the Republican delegates slurred.

The best answer to this attack on REA came from the State president of the South Dakota Rural Electric Association who said:

The record of the rural electric cooperatives in the State is one of which both political parties could well be proud. Rural electrification has brought prosperity to our businessmen on Main Street and comfort to our farm homes. REA has harmed no one and has been good for all America. Surely the GOP will reconsider their recent action.

South Dakota's leading independent daily newspaper, the Mitchell Republic, observed that in view of the weak REA plank of the senior State Republican platform, "these Young Republicans aren't too much to blame." The Mitchell editor further pointed out that the senior State Republican leadership has completely ignored the fact that the present Republican administration in Washington has tried to raise interest rates to REA associations—a move which REA experts say would paralyze rural electrification.

Under unanimous consent I include at this point in the CONGRESSIONAL RECORD the Mitchell Daily Republic editorial of August 24, 1960:

POOR READING UNDER REA LIGHTED LAMPS

South Dakota Young Republicans at a meeting in Sioux Falls last weekend may have pulled the classic mistake of the 1960 campaign when they rejected an innocuous plank congratulating the REA on its 25th birthday.

Details of the YGOP action are vague and conflicting. This much is certain. As originally drawn the platform included the statement that the YGOP congratulate South Dakota's REA's on their 25th anniversary. At least one speaker objected to the plank and after some words it was stricken from the platform.

The chairman of the YGOP platform committee brushed the State convention's action off with the statement that the entire consideration of the plank probably took about 45 seconds. The meat of the argument apparently grew in the opposition of a delegate to the philosophies expressed in the South Dakota Highliner, publication of the State REA organization.

Probably these young Republicans aren't too much to blame. The parent GOP organization at its convention earlier could squeeze through only this simple congratulation to the REA's on their silver anniversary. It ignored efforts of the present administration in Washington to raise interest rates to REA borrowers. It ignored the fact that millions of dollars of revenue to the Federal Government are being lost each year by present policies that provide for dumping of water for navigation.

But for the information of these young Republicans—and their elder brothers in the party—a review of just how the Rural Electrification Administration was born might be wise. REA was not originally a brainchild of Franklin Roosevelt's early administration. It is the illegitimate son of private power companies who refused to accept parental responsibility of providing electric service to all.

The first Roosevelt proposal for speeding electrification of our rural areas was that the Federal Government loan to private power companies money at low interest to expand their lines onto the farms of the Nation. The private utilities, with the cream of the customers already wrapped up, turned down this proposal. The only other solution was creation of farmer-owned cooperatives and thus the REA was born.

In the early thirties candle, gas, and kerosene lights were the norm on farms, particularly here in South Dakota. Today, they are the exception. In the early thirties, coal, wood, or cobs were the norm for providing cooking heat. Today they are almost extinct in this department. In the early thirties a car or horse was necessary to carry on conversation with a distant neighbor. Today, because REA paved the way, a majority of farm homes have telephones.

To reject a simple congratulatory statement for the progress made by REA in South Dakota on the grounds that the newspaper printed by REA for REA customers is fighting for even greater development of this rural electrification program just doesn't make sense. It must have made poor reading under the lamps lighted from rural electric cooperative powerlines.

Dr. Nowak: Man of the Year

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. MACHROWICZ. Mr. Speaker, as former president of the National Advocates Society, I had occasion on August 27, 1960, to attend the last day of the joint annual convention of that organization and of the National Medical and Dental Association of America, held at Bedford Springs, Pa. These organizations include in their membership the lawyers, doctors, and dentists of America of Polish ancestry.

This year the annual Man of the Year Award was presented to Dr. Stanley John Gregory Nowak, of Boston, Mass. Dr. Nowak is a graduate of the Harvard Medical School. He is a consultant in surgery at the Boston City Hospital, the senior surgeon of the Mount Auburn Hospital of Cambridge, Mass., and the consulting surgeon of Mount Desert Island Hospital in Bar Harbor, Maine. He is an assistant professor in surgery at the Harvard Medical School and is a member of the American Board of Surgery since 1953.

He served in the U.S. Navy in World War II with the rank of commander and received an official commendation from the Navy in 1945. He is an honored member of a great number of professional organizations and is a recipient of the Order of Polonia Restituta with the rank of commander awarded to him by the Polish Government in Exile in London, England, in 1958. He has amassed a very valuable collection of Polish literary and historical memorabilia and is presently engaged, in his spare moments, in translating the epic work of the great Polish author Henryk Sienkiewicz, entitled "Quo Vadis" from Polish to English.

His acceptance speech of the Man of the Year Award was a masterpiece which I believe merits bringing it to the attention of my colleagues and of the other Americans who were not privileged to hear it. Under the order of unanimous consent previously granted, I insert it herewith:

Mr. President, honored guests, members, ladies and gentlemen, I am profoundly

thankful to you and your organization for the honor of being selected the Man of the Year on this, your jubilee anniversary.

I am delighted that you have chosen for the Woman of the Year one whose surgical skill and devotion to things Polish are most worthy of her award.

That such a double honor should come to the historic city of Boston will, I hope, not cause disaffection toward a city which confides a sincere regard for other great cultural and educational centers of this magnificant country.

Our city is referred to occasionally as the Athens of America. We accept this compliment with modesty, insisting, however, that, through like simile, its sister cities reflect in the glory of Corinth, Sparta, Troy, Alexandria, Carthage, Rome. Thus we admire you, our sisters, whose tercentennial spirit of the frontier has welded together a nation of great strength and continuing tradition derived from the respected past.

In strength we are confident that we stand supreme. In comparison with the power of the mighty cities and countries of the past, our country could engulf those historic empires with the facility of a giant. The Damascus steel sword would splinter before the blow of sabre of Pittsburgh steel. A Persian galley would crumble before even the smallest craft of our Navy, the Roman stone mortar would collapse like a contrivance of matchsticks before one of our intercontinental rockets launched from Cape Canaveral.

Although America's fundamental destiny was and is, nonmilitary and peaceful, America cannot accept the role of deuteragonist on the Martian stage. For this destiny America sprang from the ancient fountainheads of freedom, a freedom born of the spirit and the body, for it can only germinate, flower and embellish through courage, labor and sacrifice.

America, therefore, is a recarnation of the ancient cultures for through its veins flows the blood of the Athenian, the Roman, the Gaul, the German, the Angle, the Slav, the Jew, the Oriental—a blending which yields a whole greater than its parts.

One of the ingredients of this lifeblood is the maranthine fraction of Polish origin. As its Greek root designates, this crimson element is unwithering, unfading, undying, especially in the cause of freedom. This peculiar Polish disposition is not egocentric but, on the contrary, effluent and generously universal in its outlook as Poland's motto of the centuries attests, "For your freedom and for ours."

We are justly proud of this particle in the composition of the American faith. We mean to honor it while we nurture and augment it. This we can do as individuals, with courage, labor, and sacrifice, especially when we labor without thought of reward.

Your organization has rounded out 50 years of its existence. Although in terms of years this is but a short span of time, yet it has been a period as tumultuous as it has been burgeoning.

In the field of government we have seen the fall of monarchical empires, the democratic liberation of peoples from tyranny only to be plunged into a worse slavery, an unbelievable shift in balance of power, failure of the League of Nations, of the Locarno Pact, the establishment of the United Nations whose collapse is being threatened by a state of universal disharmony, abetted by innate organizational weaknesses, the lack of international legal and military authority, the unwisely permitted veto which I saw personally surrendered in 1945 in San Francisco. The power of the United Nations has been further weakened by collateral deals featuring personal diplomacy, summitry, and by the dominancy of the rodomontade over the prophets of truth. The latter, representing a decay of righteous positivism, is a serious threat to freedom.

The great American poet, Walt Whitman, cried: "When freedom goes out of a place, it is not the first thing, nor the second to go; it is the last. All others go before it."

In the recently published work of Jerzy Andrzejewski, "The Inquisitors," he uses the Spanish Inquisition as symbolic warning to the world today. "Our power * * * is based upon universal fear. Except for a handful who are obedient from choice, everybody must be so afraid that no one is capable of even imagining our existence free of fear. A wife must mistrust her husband, parents must fear their children, superiors must be afraid of their subordinates, and all of them must tremble before the all-knowing and omnipresent punitive justice. * * * We must have many laws and much fear."

Consider the newest of fears, science, which has been as revolutionary as the forces of international change. While it has made beneficent contributions, unheard of in the past, this branch of knowledge has been deviated by sinister forces into a macabre race threatening our very existence.

Above this cauldron of furies a vapor rises, as if a vampire or spectre, of a brave nation sacrificed upon the altar of expediency not in one but in four oblations. Each time it was written: "Finis Poloniae." But the Polish nation through 1,000 years has been indestructible because she remembers her glorious, as well as her tragic past. Thus she hallows the honored dead from Lignice, Grunwald, Raclawice, the Warsaw of the Partitions, the Warsaw of 1939, Falaise, Tobruk, and Monte Cassino.

It has been said that Polish soldiers "drink death like wine."

Poland worships the numerous sainthoods from Adalbert to Andrew Bobola. She pays hommage to her rulers from Mieszko to Stanislaw Powiatowski. She exalts her scientists from Copernicus to Curie-Skladowska, her artists from Matejko to Wyspianski, her heroic commanders from Sobieski to Sikorski, her poets and writers from Kochanowski to Sienkiewicz and Conrad, her musician-composers from Chopin to Paderewski.

The indestructibility of Poland lies in its resilient nationalism and its indomitable spirit. Her sons and daughters in every echelon of its political and social structure stand ready to fill in the breach when one, or more of the lines of defense falter usually through overwhelming external attack or through their own weakness. We see it most strikingly in the period after her final dismemberment in 1795. It was then that the poets of a supposedly erased nation, though exiled to foreign lands, fanned the flame of national courage, prophesied stirring truths and infused undying hope into their people. The beautiful words of these poets are well known to you, every Pole has memorized them, these wreaths of faith by Mickiewicz, Brodzinski, Slowacki, Krasinski. When, finally this medium of Polish expression was cruelly denied them, her invincible spirit gave forth a Chopin and Paderewski.

In 1910, when your organization was founded, a memorable occasion took place in Lwów, Poland; namely, the commemoration of the centennial of Chopin's birth at which Paderewski delivered a historic panegyric, as inspiring, as technically beautiful, as one of his monumental pianoforte readings.

I shall take this occasion to quote several excerpts from this great ode which I have recently completed in, what I believe to be, the first American translation. Bearing in mind the tragic state of Poland during the lifetime of Chopin and the significance of his music to the Polish people, also recalling her still tripartite state in 1910, the words of Paderewski gain increasing significance.

"Through his music Chopin was able," said Paderewski, "to render the undulation of her feelings * * * the call of heroism and rapture of delirium which * * * crumbles rocks and * * * (conquers) despair." Therefore "whether native Mazovsian dances, whether yearning nocturnes, whether brisk echoes from Krakow lands, whether mysterious preludes, whether striding Polonaises, whether the elemental but wonderful etudes, whether the stormy ballades or whether the heroic sonatas (the Pole) (understood), everything * * * for all this (was) Polish. * * * Thus Chopin prevailed as 'a poet, an enchanter, a monarch, a mighty of spirit (who), equalized all states not unto vulgarity but unto the loftiest summit of feeling.'

"Through long years of torture, rack and persecution, through long years of harassed thoughts, the most secret threads were tied to him. * * * Indeed he was a contrabandist, who, in the scrolls of innocent notes, dispersed a prohibited Polonism among countrymen scattered unto the boundaries. Indeed, he was that priest who provided a scattered nation with the holy sacrament of our fatherland."

So spoke the immortal Paderewski in 1910 in the beautiful Philharmonia Hall in Lwów, overflowing in both capacity and emotion.

In 1960 we are to celebrate the centennial of Paderewski's own birth. He too was a genius patriae. If Chopin provided the Sacrament, Paderewski symbolized the saviorship.

Having had the cherished honor of knowing this greatest of men, having the sublime privilege of a place of honor at his bier, and having, 2 months ago, the exalted opportunity to speak at his place of entombment in the Arlington National Cemetery, I would feign if I presumed to utter an ode of appreciation of Paderewski.

On another occasion the illustrious Dr. John F. Finley enshrined him with the following words:

"You've brought from out the air such symphonies
As God with all His earth-orchestral range
From cataract through soughing wind to lark
Could not produce without the skill of man.

Your touch has been transmuted into sound
As perfect as an orchid or a rose,
True as a mathematical formula
Yet full of color as an evening sky.

But there's a symphony that you've evoked
From out the hearts of men, more wonderful
Than you have played upon your instrument
Composed of the praises of mankind.

For what you've nobly done to lead again
To its proved place amid earth's greatest states
Your land that gave the world Copernicus,
And for freedom Kosciuszko gave."

But Paderewski would protest that he was only a fragment in the life of his Fatherland. In his own words of 1910, he would admonish us to "hallow the memory of our fathers * * * (and to preserve) in our Lettish breasts still unquenched particles of ancient faith. * ** * A great person, even the greatest cannot exist above or beyond a nation. He is of its seed, its flower, its grain, and, the greater, the higher born, the stronger, the closer to the heart of the nation."

Nineteen hundred and ten, nineteen hundred and sixty—two great Polish anniver-

saries so felicitously coinciding with your memorable milestones. It were as if the soul of Chopin cried out on his centennial in 1910 for a voice in the new world to take up, as said Paderewski, the unfinished and undecided contests. For music, with its elements, vibrations and throbbing are the elements of life. Quiet but audible, powerful but unrecognized, music exists wheresoever there is life. It blends with the rush of water, with the breath of the winds, with the rustle of forests; it is in the elements of the revolution of the earth, in the mighty movement of planets, in the hidden but inexorable battle of the atoms. It is everywhere and reaches farther and higher than the human word can reach; it rises toward the supernatural spheres of pure feeling, as high as the heavens. Its manifestation, rhythm, by the law of God, keeps order, maintains harmony of the earths. The melodies of God flow uninterruptedly over the starry expanses, over the milky way, over the worlds, into the beyond, over human and superhuman spheres, creating that wonderful union: the harmony of omni-existence.

In 1960 we rehear these words uttered in 1910 by one, who awaiting his Wawellian Valhalla, rests on the summit of Arlington and exhorts: "So let us strengthen our hearts to perseverance, endurance, pattern our minds for deeds, valiant and equitable; let us elevate our feelings to strong faith."

As an American organization you are privileged to speak to America of this faith, of the universal but unheeded lessons of an immolated country with which you are consanguinous and of which you may be justly proud. She has been, and is, the hub of Europe, the pivot on which a delicate balance wheel swings to and fro, marking seconds for a thousand years, and, by God's will, another thousand years.

New Industry to the South

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. ADDONIZIO. Mr. Speaker, the wise and witty Harry Golden recently discussed with his customary perception the national problem of job migration. His article "New Industry to the South" in the Carolina Israelite for May–June 1960 contains an excellent view on this major issue, which I commend to the attention of every Member, regardless of residence. Mr. Golden's thought-provoking statement follows:

NEW INDUSTRY TO THE SOUTH

In all the Southern States, among the State legislatures, the Governor's mansion, and the chambers of commerce there is a swelling movement to bring down "new industry from the North." The movement has gained tempo with each new success. Each State now has set aside ample funds to encourage this project. Representatives, public relations experts, political leaders visit New York, Chicago, San Diego, and even Frankfort Germany (to entice Volkswagen to set up a distributing center on the Carolina seacoast).

These mass importations of northern industry to the South started shortly after the end of World War II. The first of the immigrees were the garment industries from New York trying to escape from David Dubinsky and the International Ladies Garment Workers Union. Sewing shops are now set up all over the Carolinas, Georgia, Alabama, and Tennessee. "Escape" is perhaps too harsh and castigating a verb. These shops were not only escaping unionization, but let us be fair—they were also attracted to the South because it is the inevitable industrial empire of our country. It has abundant raw materials and a huge untapped source of labor.

New industry from the North is not a total success story. While it is an operations bootstrap it has some alloy of pain. Take a case history: A factory in Johnstown, Pa., is induced southward by promises of tax remittances, rent-free property, cheap labor, and friendly environment. The factory pulls up stakes. The total result is not merely employment for southerners but also unemployment for 400 Pennsylvanians who are unceremoniously dumped on the State unemployment and relief rolls. What is the Nation's gain? This is no conquest.

Multiply this one process by hundreds and you will have an accurate idea of what happens in transferring new industry from North to South.

This sort of criticism cannot stop the inevitable, nor is it intended to. But this sort of criticism ought to help open this problem to serious public discussion. Open discussion of this problem will even accelerate this industrialization of the South.

The Governor's trips to Chicago and abroad, the roving bands of southern chamber of commerce deputies, the enticing allurement seem to me only an attempt at finding an easy way out.

More difficult perhaps, but more valuable to the Nation as a whole would be a southern project to develop home industries. This is the waste, to let the resources of the South be dormant chasing the resources of the North. North Carolina, for instance, is one of the richest States in raw materials. Yet Tar Heels send clay up to New York for a few dollars a ton and it comes back in the form of cups and saucers for which Tar Heels pay many thousands of dollars a ton. North Carolina is a natural for a vast home-established pottery industry. In addition, 10 or 12 counties benefit when new industry relocates; the other 90 counties are left on their own and they are very, very poor and no attempt is made to rescue them.

North Carolina has a God-given opportunity to build an industry in every county beginning with fisheries and canneries on the coast coming through the peach country and the agricultural plain for all sorts of food processing and canning and into the huge industrial Piedmont where I live.

An industrial commission that stays home to build up native and indigenous industries would change the face of North Carolina without causing hardship or unemployment elsewhere.

Registration Is Necessary and Every Vote Is Important

EXTENSION OF REMARKS
OF
HON. WILLIAM J. RANDALL
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. RANDALL. Mr. Speaker, I asked unanimous consent to make a few remarks about the general subject of registration of voters, because I think it is a timely subject and deserves consideration just before the general election.

In the large cities and more heavily populated areas of our country, the voter's registration is a legal requirement. There is no requirement in the rural and small community where the election officials personally know and are well-acquainted with the background of each citizen. For reasons of necessity, the statement is literally true that "If you don't register, you can't vote."

Many individuals protest the inconvenience of having to register when they move into a city or within a city, and yet I think they might have no opposition if only the reasons for this requirement were fully understood. The reasons for registration are:

First. An individual's right to vote is based on such qualifications as citizenship—by birth or naturalization, legal age, and certain residence requirements in the State and county.

Second. These qualifications are brought out by questions, and the answers are recorded in a book and verified by the signature of the voter.

Third. This process takes more time than could be crowded into 1 election day.

Instead of a seeming inconvenience, on election day, registration proves most convenient when all you do is to identify yourself, sign your name and cast your ballot.

Registration is actually for your benefit. Do not complain when it is enforced.

I want to particularly compliment the editors of the Building and Construction Trades Bulletin, the official monthly publication of the building and construction trades department, AFL–CIO, for their statement of the need for their members to register to vote. Mr. Speaker, under unanimous consent I include excerpts from this article which appeared on the front page of the August 1960 issue of the Bulletin as follows:

THE IMPORTANCE OF EVERY VOTE

In order to win victories, every potential voter must be registered to vote. A nonregistered voter is a vote for the opposition. A more recent example of what a strong registration drive can produce can be seen in the recent primary election in Tennessee. We feel that this registration drive contributed greatly to the renomination of one of labor's stanchest friends, Senator ESTES KEFAUVER.

Both political parties this year are predicting a very close election. Some evidence of this closeness can be seen in the recent election in North Dakota where Senator BURDICK won by a mere 1,000 plus votes out of 208,000 votes cast.

Vice Presidential nominee LYNDON B. JOHNSON, was elected to the Senate in 1948 by a majority of 87 votes.

Other instances of victory by a close margin are well known. For example, in 1948, President Truman carried California and Ohio by less than one vote precinct and was thereby elected President.

In 1944 Senator Taft carried Ohio by less than one vote per precinct.

In 1954 Governor Harriman won by a shade more than one vote per precinct.

In 1950 Governor Williams, of Michigan, was elected by less than one vote for every three precincts.

When the late Senator McNary, Republican, of Oregon, ran for reelection to the Oregon State Supreme Court, he received 34,608 votes while his opponent received 34,609.

Mr. Speaker, the above statistics point out very clearly the importance of every vote and the building and construction trades department, AFL–CIO, are to be congratulated for emphasizing the maxim, "If you don't register, you can't vote." It is quite apparent they realize now is the time to do something about it. Every vote is going to be important on this election day, November 8.

We Must Develop a Strategy for Victory—To Save Freedom—Freedom Everywhere

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mrs. BOLTON. Mr. Speaker, it was my very great privilege to introduce the keynote speaker of the Republican Convention held in Chicago the last week in July, our colleague, the distinguished Member from Minnesota, Dr. WALTER JUDD.

Tireless, effective, and fearless, a champion of independence and freedom, he is one of the very rare men in this House of Representatives. For 10 years a medical missionary in China, his penetrating vision recognized the menace of the Japanese aggression in China and the sinister quality of communism a decade before they exploded in our face. Upon his return home, he did his utmost to bring the realization to America.

I do not need to tell anyone here what his rare talents are nor with what consecration he works. His contribution is greatest in foreign affairs, for that is his major responsibility, but he has been the author of important and intelligent legislation aimed at full employment for America's working millions. Active in the field of medical aid for the aging and in measures dealing with vocational rehabilitation and education, he has been a leader in the successful battle of the administration of President Eisenhower to check inflation.

Beyond all else, WALTER JUDD is a man of deep religious faith, a man whose life is based upon the certainty that understanding and wisdom are given to those who ask for it.

I therefore under unanimous consent, Mr. Speaker, include with my remarks, the keynote address given in Chicago by our colleague, the distinguished gentleman from Minnesota, WALTER H. JUDD:

WE MUST DEVELOP A STRATEGY FOR VICTORY—TO SAVE FREEDOM—FREEDOM EVERYWHERE

(Keynote address to the 1960 Republican National Convention by Representative WALTER H. JUDD, of Minnesota, July 25, 1960, Chicago, Ill.)

Mr. Chairman, fellow Republicans, fellow Americans, as we meet tonight in this Republican National Convention of 1960 I do not believe you want me to indulge in the traditional keynote speech, blaming the other party for everything that is bad, taking credit to ourselves for everything that is good, and promising that if you voters will just elect us to office this fall, we will solve every problem, increase every benefit, expand every existing program, start a whole flock of new ones, give everyone everything he wants—and reduce the national debt at the same time.

The times in which we meet are too serious for that.

The problems we face are too disturbing.

Our country's safety—your safety and mine—are too gravely endangered.

What the American people want to know as they watch us here tonight is: Which party has the greatest capacity to keep this country safe and sound?

Which party is the most alert to and best understands the powerful forces against us, abroad and at home?

Which party best understands the forces for us, abroad and at home?

Which party has the ablest, the most experienced, the best qualified, and the finest men to lead our country through the perilous months and years ahead?

We do not pretend that our party is always right and the Democratic Party is always wrong.

We know, as do you who are listening, that both Democrats and Republicans want a strong, free, and prosperous America in a peaceful and secure world. The difference between the two parties is not over those good objectives, but over the best way to achieve those good objectives—and keep them.

Some Democrats have regularly tried to make it appear that Republicans are opposed to various good ends—such as security for old age, adequate medical care, better education, better housing, protection of the rights of labor, aid to agriculture—just because we do not agree with the solutions they advocate, believing they are not the right way to get what we all want. But it is not because we are against the good ends; it is precisely because we are for them that we oppose measures we believe are unsound.

It is the obligation of the Republican Party and its members to show that loose fiscal policies, while temporarily gratifying, in the end inhibit growth rather than expand it.

Sometimes we are told that to win elections, we Republicans should make more grandiose promises, like those the opposition party made at its convention. Maybe that is a way to win elections; but we repudiate it, first because it would not be shooting square with you, the voters; and second, it would not succeed. For there is no chance of our outpromising the Democrats.

Overshadowing everything else as we meet is the hard fact that a powerful enemy threatens us on every front. It is the most dangerous assault upon us in our history, in part because it is so different from any previous threat.

And without victory in this struggle, there will be no survival of freedom for any of us—Democrats or Republicans.

I

The Republican Party was born in a time of crisis. It was brought into being by the strong free spirits of a century ago, to deal with the gravest issue of the 19th century—human slavery.

In 1860 in this city the Republican Party nominated as its candidate for the Presidency of the United States a man who had risen from the humblest beginings to become a leader in the effort to end human slavery without destroying the Union.

He led the party to victory, the Nation to salvation, and the people to a rededication to the sound principles on which the country had been founded and had grown great.

We want tonight, both to honor Abraham Lincoln and to learn from him.

Please God, we may do as well with our divided world as he did with his divided Nation.

For the gravest issue of our century also is human slavery—this time not men enslaved by other men; but, far more complex and dangerous, masses of men enslaved by governments.

More human beings are in bondage tonight than ever before in human history.

Nine hundred million abroad are denied by their government the right to worship, to speak, to assemble, to join, to own; the right of a man to choose or to change his work and to live his own life with his family and friends—in freedom.

In this total situation, the Republican Party stands today as it has from the beginning—for freedom and against slavery.

You will judge both parties not by promises but by performance. And it is on the basis of our record of solid performance that we proudly present to you in this convention, an honest accounting of our stewardship during these eight years—and a look at the future.

How well we have done what we said we would do when you elected us?

How do we propose to deal with the challenges we face now, at home and abroad?

Why do we believe our principles and proposals offer greatest hope for accomplishing the greastest good and the greatest growth for America in the next 4 years?

II

Let us deal first with our international relations.

We said in 1952 we believed we could get and maintain peace with honor. We have done it.

We brought to an end the fighting in the Korean war which the Truman administration would not win and could not stop.

It did not make sense to continue to enlist American youth and exhort them to fight well in the noblest tradition of America's greatest heroes—but not to fight too well because then they might win, and that might provoke the enemy. They should give all they had, their lives—and over 33,000 did—but they must not win. It was the first war ever fought—so far as I am aware—in terms of trying to please the enemy. To continue that war was madness.

Then President Eisenhower took charge. It took time and patience and skill, but within 9 months, the fighting was brought to a close—without dishonor, without sacrificing the interests of an ally, or weakening our security position in the Pacific. We Republicans are proud of that accomplishment.

In addition, this administration has prevented a half dozen other threats from developing into war—Trieste, the Mossadegh uprising in Iran, Guatemala, Formosa, Suez, Lebanon, Quemoy, West Berlin.

How was it done? Not by sacrificing our principles in secret deals under the table; but by steady, patient firmness and strength in support of principles.

What principles? First, our own historic principles: human freedom; keeping our word; steadfast support of friends and allies. And, second, wholehearted support of the United Nations.

In short, our efforts everywhere have been to help build free nations up; the efforts of the Communists everywhere are to pull free governments down.

III

It does not avail, however, to be firm in support of principles unless we have the strength to back the firmness up. This administration has built up gigantic strength in our own Armed Forces and given vital assistance in building up the strength of other nations standing with us against the common threat.

Ours is a balanced power, not all our eggs in one basket, whether it be a bomber basket, a missile, a submarine, or any other basket.

President Eisenhower will perhaps have something to say on this subject tomorrow night. I hope those who have thought they know more about our armed strength than he and our Joint Chiefs of Staff, will listen in too.

But I am compelled to take notice here of certain charges made by the opposition party.

It is claimed that this administration allowed a missile gap to develop. No, it found a missile gap and has managed to get it almost closed.

When President Eisenhower took office in 1953, the preceding administration had actually retarded work in this field, even though it knew that the Soviet Union was making tremendous efforts.

The Truman administration in 8 years had spent 17 times more for price supports for peanuts than for long-range missiles.

The Eisenhower administration is today putting 40 times as much into such missiles each month as the previous administration did in 8 years.

It took the Soviet Union 12 years to develop its long-range missiles. It took this administration 6 years to get ours operational. Anything wrong with that?

Senator KENNEDY was reported by the press to have said on February 21 of this year, "We have the greatest deterrent force in history and thank God for that." He was right.

IV

But it is not enough to have such vast overall power. Our primary desire in building such striking force is not to fight a war, but to deter one.

It is not just the strength that we have, it is the strength that our enemies, our allies and our own people know that we have, which is our hope of deterring war.

What kind of reckless and irresponsible action is it for anyone to misrepresent the United States as a second-class power, as was done in the Democratic convention, and thereby encourage the very attacks which all Americans profoundly hope and pray can be prevented?

Did you see the movie shown at their convention 2 weeks ago, dredging up scenes of hunger, squalor, and misery in the United States as if they were typical of America? What kind of salesmanship for their country is that?

Can our Nation's prestige be raised by tearing it down?

It is devoutly to be hoped—because it offers our best chance of avoiding war—that Mr. Khrushchev, in making up his mind about our actual military, economic and moral strength, will depend a lot more on the reports of his own agents than on the shameful misstatements made in the heat of the Los Angeles convention.

It is claimed that this administration has not taken the initiative in the cold war, that we have allowed things to drift. Yet the orators condemn the Republican administration for brilliant examples of successful initiative. For example, the U–2 flights. If we had not developed U–2 and had not been using it to keep up to date on military preparations within the Soviet Union, we could properly have been charged with inviting another Pearl Harbor. The fact that our U–2 operations were so outstandingly successful for 4 years should be a source of intense pride to all Americans. The U–2's were not provoking war, they were helping to prevent war.

Again, it has been suggested that the President should have done something different or better about Mr. Khrushchev's breakup of the Paris conference. Will they please tell you what they think the American people wanted their President to do? Apologize, and hand over West Berlin? Blow up and start a war? Of course not.

The facts are that it has been the President himself and Secretaries of State Dulles and Herter who on innumerable occasions have warned the American people against optimism regarding any conference with Communists at the summit in the absence of any evidence of change in their objectives and methods.

Just as Prime Minister Macmillan said a year ago that he thought he ought to go to Moscow to find out if possible just what the Soviets had in mind, so the President invited Mr. Khrushchev to this country, and agreed to go to the Soviet Union; and the Big Three agreed to meet with Khrushchev in Paris—all in the hope of finding ways to get a settlement that might end the cold war without betrayal of our principles, our commitments, or our allies.

At the Paris conference, everybody hoped that the miracle might take place and Mr. Khrushchev would abandon his avowed purpose to bury us—one way or another. Tragically, there was no miracle. Mr. Khrushchev killed the hope.

But his ruthless torpedoing of the Paris meeting was evidence of the failure of his foreign policy, not ours. His strategy for at least 2 years had been the old one of trying to conquer the West by dividing it. He tried his best to set our allies against each other and against us. He came to our country and talked about peace and friendship, trying to whittle down our resolution and soothe us into relaxed slumber. He did not succeed.

When Mr. Khrushchev knew before the Paris conference convened that he had failed to divide, deceive or soften up the free powers, he had no choice but to break up the conference. Otherwise, he would either have had to back down on West Berlin, or actually start a war. Either would have been fatal to him. His scuttling of the Paris conference and his grotesque efforts to pin the blame on us were proof positive, not of our weakness, but of our strength.

With the bald deception of Khrushchev's fake peace posture exposed at Paris by himself, he had to change his tactics and make a different effort to divide and conquer. He is now moving heaven and earth to achieve by subversion among the newer or more vulnerable nations of the free world coalition what he could not achieve by division of the Western Powers. He is trying to upset free governments, one by one, by ordering into action the apparatus the Communists have been systematically building and training in other countries for decades, for the very purposes now revealed so plainly in Japan and Cuba.

Why did the Communists have to cancel President Eisenhower's visit to Russia and resort to such violent measures in Japan to prevent his visit there? Not because of the ineffectiveness of the President's visits abroad, but because of their demonstrated effectiveness. The Red leaders saw the vast difference between Eisenhower's reception in India, for example, and the receptions given Khrushchev and Chou En-lai. They didn't dare let Ike chalk up still another tremendous triumph with millions of people in Mother Russia itself, and in a key country like Japan.

V

It has been charged that no previous Presidents or Vice Presidents ever suffered such insults abroad—as if somehow that is their fault. There are two inescapable answers. One is that as long as two previous American Presidents were willing to give in to Soviet leaders, they got along famously with them. Why should the Communists insult them as long as they were getting what they wanted?

Naturally Khrushchev would prefer not to negtiate with a Republican President who he has learned will not be taken in or intimidated or tricked into any concessions, no matter how innocent looking, that would weaken the free world.

The second answer is that no previous President has faced a Communist conspiracy that was strong and arrogant enough to take such action as Mr. Khrushchev took.

And how did the Communist conspiracy get so strong and arrogant? That cannot be laid at the door of Republicans. Look again at the record.

I would rather not go over the mistakes of the past; there's more than enough to talk about regarding the future. But if Republicans are to be charged with inability to deal with the forces of aggression which those who make the charges helped to build up, then we owe it to the truth to set the record straight.

The trouble we are in with the Communists is exactly the trouble that Republicans warned for years before 1952 would develop if we followed the courses that were followed.

Was it Republicans who recognized the Soviet Union in 1933 and gave it acceptance into our country and world society as if it were a respectable and dependable member thereof?

Was it Republicans who, at Teheran, against the urgent advice of Mr. Churchill, agreed to give the Russians a free hand in the Balkans?

Was it Republicans who secretly divided Poland and gave half of it to the Soviet Union?

Was it Republicans who agreed to the Communist takeover of a hundred million people in Eastern Europe who are not Russian?

Was it a Republican administration which at Potsdam gave the Soviet Union East Germany and left West Berlin cut off from the rest of the free world?

Was it a Republican administration that publicly promised that Manchuria would go back to its rightful owners, the Chinese, and then secretly at Yalta gave control of Manchuria to the Russians?

Was it a Republican administration that divided Korea and gave control of North Korea to the Communists?

Was it a Republican administration that gave to the Soviet Union the Kurile Islands which had never been anybody's except Japan's, thereby endangering both Japan's and our security in the North Pacific?

Was it a Republican administration that rightly put its hand to the plow in Korea, and then when victory was in sight turned back, allowing the Reds to recover so they can make still more trouble for us in the future?

Was it a Republican administration that fell for the Communist offer of a truce in Korea without requiring that the North Korean aggressors lay down their arms and the Chinese Communists get out of Korea where they had no business to be? You know it wasn't.

In summary, it wasn't under Republicans that 600 million human beings disappeared behind the Iron Curtain in the first 5 years after World War II.

In fact, the record will show that Republicans opposed these steps every time they were were taken.

VI

What our Republican administration has done in these 8 years is, with initiative and imagination, to stop the process of retreat before the Frankenstein monster that its predecessors did so much to build up.

We have resolutely opposed anything anywhere that would make Communist regimes stronger—and we shall continue to do so.

That is why, for example, we have opposed and must oppose official recognition of Communist China or its admission into the United Nations, unless or until it will give up in a dependable way its aggressive acts

and threats against other countries; that is, give up communism. Recognition and admission would needlessly present it with smashing victories. Does it make sense to build up an avowed enemy?

But our refusal to give Red China the tremendous boost of official recognition does not mean—as has been asserted by people who ought to know better—that this administration has been hiding its head in the sand, or pretending Red China does not eixst, or trying to ignore 600 million Chinese. The exact reverse is the truth. This administration is acutely aware of Red China's existence and the threat it constitutes to freedom, not only in Asia, but everywhere. It was not this administration which indulged in the illusion that Communists in China are democratic agrarian reformers.

We are not ignoring Red China. We have been negotiating with its official representatives for 5 years. The 99th such negotiation, unfortunately still fruitless, took place just last week.

VII

Surely it is now plain to all that since the Communist world conspiracy remains the same, and since America does not intend to surrender, and since nobody wants a hot war, there is only one alternative left. We must win this cold war.

To do this we must have leaders who understand this enemy and its tactics, and will mobilize all our resources for the struggle.

We must use more effectively our strongest weapons, the values and virtues of a system of government which has given freedom and dignity and better living standards to human beings than any other system ever has.

How many of us understand our own system well enough to sell it to others with contagious enthusiasm, as the Communists are so well trained to sell theirs?

We must let loose in the world the dynamic forces of freedom in our day as our forefathers did in theirs, causing people everywhere to look toward the American dream.

Men have always found ways to bring down tyrants in the past; men will find ways to bring down today's tyrants, if only we don't build up the tyrants.

In short, we have a good strategy for holding. But we cannot hope to win in the end just by holding. We must develop a strategy for victory.

A new chapter has now been opened by Khrushchev. The Soviet Union stands naked before the world today, self-exposed, its objectives and its unchanging methods of deception and trickery revealed by its own acts.

It is going to require stronger approaches, different strategies, new tactics by someone who has proved he understands communism.

America has the brains, she has the wealth, she has the weapons. Who can best harden into rocklife firmness her will?

I am confident that the nearer our people come to election day next November, the more they will become convinced that the course of wisdom and sureness for America is to continue to entrust the destiny of our Nation to steady, competent, experienced, principled Republican hands.

The man who will be nominated in this convention as our candidate will be incomparably the best qualified to deal with the relentless cold war which we have tried our best to avoid, but which we now have no choice except to win.

It has been said by Mr. KENNEDY that the most important issue in this campaign is foreign policy. We agree and welcome the test.

VIII

Now let us take a look at our record on the domestic front. Undeniably this has been overall the best 7-year period in the history of the United States.

What did we say in 1952 that we would do? First, we said we would be a middle-of-the-road government. We believe that middle-of-the-road government is, in the long run, the best kind of government for everyone. For when anybody or any group, whether at one extreme of the other, gets all it wants, it is at the expense of the people as a whole.

We promised we would clean out the corruption that was a scandal under the previous administration and led to more than 20 convictions of high officials. I am proud of the fact that there has not been a single conviction for malfeasance in office of any high official of this administration. That does not mean everything has been perfect. It does mean that whenever and wherever there was any slightest suspicion of impropriety, this Republican administration has not tried to cover up; it has cleaned up. That is what you wanted it to do.

We said we were convinced we could bring prosperity without war—something our predecessors had never been able to do in this century. We succeeded.

The first requirement was to stabilize our economy and slow down the inflation. It was stealing the people's substance—and was especially cruel in its eating away of the value of the pensions and social security benefits which millions of older persons were counting on for the security and serenity they so richly deserve in their years of retirement.

How could inflation best be checked?

The Democrats clamored for more controls.

President Eisenhower announced he would take off the controls.

You will recall how some screamed that the Republicans were yielding to the profiteers, big business, money interests; prices for common people would now go sky high, and so on.

But did they? No. The prices which had been rising alarmingly—48 percent in the 7 Truman years—promptly leveled off and stayed practically stable for 4 years. The total rise in prices in these 8 Republican years is less than 10 percent.

We achieved this stability not by changing our free system, but by using it. It works better than those of little faith in the American people give it credit for.

We said in 1952 that if the Federal Government would stick to its proper function of running the business of the Nation, and get out of trying to manage the affairs of our people, the creative energies of the American people and their millions of individual enterprises would create a vaster expansion of production and trade, with correspondingly greater expansion of jobs, than the Government itself could do. Were we right or wrong? Well, there were 61 million jobs when we took over in 1953. There are 68 million jobs tonight.

And jobs at higher wages. Wages up 39 percent in these 7 years. Do you recall the seven consecutive cost-of-living increases that labor had to fight for, just to keep up with inflation under Truman? In contrast, real wages, actual purchasing power, has gone up 20 percent under this administration.

To buy a standard market basket of groceries in 1945 under the Roosevelt administration, it cost the average worker 13 hours of labor. To buy the same market basket in 1952 under the Truman administration took 13.7 hours of labor. To buy it in 1959 under the Eisenhower administration cost 10 hours.

This is the measure of how much better off rank and file people are today. Does this sound like a party of big business?

Our workers have better food and clothing for themselves and their families, more homes, more automobiles, more refrigerators, more TV's, more free time for study, for recreation, for sports, for travel, for whatever. The record is clear that labor has done better under this Republication administration than in all its previously history.

Personal income, the money that goes into your pockets, has gone up a whopping 33 percent—from $301 billion in 1952 to $420 billion in 1960—and in constant dollars.

Furthermore, a larger share of that higher income, more than 4 percent larger, goes now into the pay envelopes of workers. Anything wrong with workers getting a bigger share of the national income under the Republicans than they ever got under the Democrats?

Isn't it plain horsesense to trust for the next 4 years the leadership which has enabled you to do so well for yourself in the last 8 years?

IX

While the Republican 83d Congress was in power to cooperate with the Eisenhower administration during its first 2 years, we gave the American people the biggest single tax cut in their history—and at the same time expanded the benefits to people; more social security benefits, more for highways, hospitals, health, housing.

And you still have that tax cut. If I may borrow a phrase that you perhaps remember: "Don't let them take it away."

The Republican record in the area of meeting human needs has been one of remarkable action and progress in all fronts, contrary to the image promoted by the opposition that they alone are the party of the people.

Under social security 7½ million more persons are now covered than before. The number receiving benefits has increased from 5 to more than 14 million persons.

Under the vocational rehabilitation program as strengthened by Republicans in 1954, some 400,000 disabled men and women have been returned to active, self-respecting employment and have earned almost $2 billion. This is the true American system of enabling people to do things for themselves.

Deeply concerned with the increasing complexity of the problems of senior citizens, this administration has established a staff for research into their problems and how to use their valuable experience and talents. It has called the first White House Conference on the Aging in our Nation's history for next January.

Bold and dramatic steps have been taken to expand medical research in cancer, heart disease, mental illnesses, and other crippling and killing maladies.

In the 7 years prior to 1953, the value of surplus agricultural products distributed in the school lunch program and to needy persons, institutions, schools, and Indian reservations totaled $263 million. In the 7 years since 1953 the total distributed was $960 million worth—3½ times as much. Anything wrong with that record?

In short, we have moved vigorously whenever and wherever action by the Federal Government is the proper and best way to deal with any problem affecting public safety and the people's welfare.

When before did any government ever take less from the people in taxes and give them more in return?

How was it done? Not by Government orders, edicts, or controls, and not by Government handouts.

It was done, not by changing our principles of freedom of enterprise, but by sticking to them.

It was done by good Republican management of the Government, not management of the people.

Obviously, I cannot try here to outline our detailed proposals for the years ahead. I have not even mentioned vitally important areas like education, health, agriculture, conservation, taxation, and a dozen other issues which would require almost a separate speech each. They will be covered, however, before this convention is over.

X

May I turn, finally, to some basic principles, tested principles of freedom, which we believe it is necessary for us to understand and follow if we are to meet successfully the challenges of the future.

Many Americans have come to think that our two major parties are, after all, just about the same. But it is not so. The main difference between them, as I said in the beginning, is not over good ends. The difference—and it is a profound one—is over means. Which are the right ways to get the good ends?

We Republicans deeply believe that the first function of a good government is to protect the liberty of the individual citizen, not to take it away.

There have never been but two basic philosophies of government—government from the bottom up and government from the top down. Our fathers believed, and so do we Republicans, that most problems can best be solved by the people themselves.

One philosophy puts its primary faith in government officials. The other puts its primary faith in the good sense and the capabilities of our people.

One group begins with the assumption that the more complex and complicated a society becomes the more its control and management must be centralized in an increasingly powerful government.

We Republicans begin with the same premises and come to exactly the opposite conclusion; namely, that the more complex and complicated a society, the more impossible it is for any centrally located group of men—no matter how able or devoted or sincere—even to grasp all the details of the complicated problems, to say nothing of handling those details from Washington.

We are not against adequate Federal Government. There must be such Government to prevent abuses of power. We merely want to keep it limited to its proper fields, so that the liberty of individuals will be protected. The Republican Party stands for liberty.

In the Democratic Convention you heard a lot about Woodrow Wilson. What did he, a real student of government, think on this issue? In a speech in New York in 1912 he said, "Liberty has never come from the Government. Liberty has always come from the subject of the Government. The history of liberty is a history of resistance. The history of liberty is a history of the limitation of governmental power, not the increase of it."

Nobody has said it better than that. Yet we now see those who claim to be the followers of Wilson insisting that the way to expand liberty is to increase the powers of Government.

XI

How did our forefathers seek to limit Government to its essential functions? By putting the Government under a Constitution. Many regard that Constitution as the means by which the Government regulates the people. No, it is the magnificent means our fathers devised by which the people can regulate their Government.

Why did they insist on having a Bill of Rights in that Constitution? In order to be sure that their Government would take care of them? No, in order to be sure that their Government could not interfere in their taking care of themselves.

Rights are not what our Government must do for us; rights are what our Government cannot do to us. Rights are not guarantees by the Government; rights are guarantees against the Government, even against our own Government, in order to keep it a good government.

We believe also that all men are created equal. In support of this fundamental faith, Republicans work for government that will provide equality under the law for all citizens, and equality of opportunity for all citizens. We believe this is the best way to get the fullest possible rewards for all citizens.

It is because of this Republican emphasis on equal opportunity that the Republican Party is the party to which youth will naturally gravitate, if we make our principles clear to them. For what does youth want most of all? Youth wants to get ahead. The Republican Party stands always for maximum freedom and opportunity—for every man to improve his condition.

This is why it is possible in America for the son of a rich man, like JACK KENNEDY, to become President.

This is why it is possible in America for the son of a poor man, like DICK NIXON, to become President.

Republicans believe that that government is best, not which does most for its citizens directly, but which makes it possible for most citizens to do most for themselves—and then assists with those who, for whatever reason, cannot provide the basic necessities for themselves.

I do not say these things because I am a Republican; I am a Republican because these are the things I believe with all my heart and soul.

I think we can state it as a law that whenever a government does for its citizens that which they have the capacity to do for themselves, individually and in groups, it begins to destroy both their capacity and their incentive to do for themselves. It begins to weaken rather than to strengthen the foundations of freedom and the means of progress.

I can work my girl's arithmetic problems better for her than she can work them for herself. I can get the right answers almost every time. And she would like to have me do them for her. She'd even vote for me if I would. But I don't. Not because I don't love her or want her to succeed—but because I do.

XII

Abraham Lincoln at Gettysburg said, "Now we are engaged in a great civil war testing"—testing, among other things, whether Government of the people, by the people, for the people can long endure.

Lincoln and the Republican Party led our country through that crisis of 100 years ago. Now we are engaged in a greater conflict—the whole planet is in the throes of the mightiest conflict in all history. It is a world civil war. What is it about? It is about exactly the same thing as then: Is government of the people, by the people, and therefore, for the people to perish, literally, from the earth?

During the fiery trial of Lincoln's day he warned solemnly that this Nation could not exist half slave, half free. He and his party succeeded in restoring unity and freedom to the Nation.

Can this whole wide world of our day go on indefinitely half slave, half free? Deep down in our hearts, we know the answer is "No."

The reason why it has not proved possible to get any real agreement with the Communist world all these years is because the Communists are not pursuing the same objectives as we are pursuing. And why are they not pursuing the same objectives? Because they do not believe the same things we believe—about man, about the universe, about God.

If we in America, of whatever political opinion at the moment, are to prove worthy of this most terrible testing in our Nation's life, we too must resolve with Lincoln, "that, under God, this Nation shall have a new birth of freedom."

It was under God that our freedom was born. Only under God can there be a rebirth.

What then is our role to be? Listen again to Lincoln in his message to the Congress in 1862, "The dogmas of the quiet past are inadequate to the stormy present. The occasion is piled high with difficulty, and we must rise with the occasion. As our case is new, so we must think anew, and act anew. We must disenthrall ourselves, and then we shall save our country."

There it is:

Under God, a new birth of freedom;

A new and deeper understanding of it;

A new and deeper dedication to it.

With such a rebirth within you and me, and within our beloved party, we shall deserve to be entrusted by the people with the awful responsibilities of governing this great land. And they will turn to us and our country will be saved.

And now let us get to work.

How U.N. Fares After 15 Years

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 29, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD a thoughtful article which appeared in the Toledo (Ohio) Blade of Sunday, June 26, 1960, by Miss Judith Laikin, a talented and extremely intelligent writer.

The article briefly summarizes the history of the U.N., and is a careful, brief appraisal of its 15 years existence:

HOW U.N. FARES AFTER 15 YEARS

(By Judith Laikin)

What has become of the great expectations that focused on the birth of the United Nations at San Francisco, 15 years ago today? Have they been justified? Or does the U.N. fall short of the high ideals of its charter?

The heart of the U.N. Charter is article 39, which authorizes the Security Council to maintain international peace and security—or restore it after it has gone to pieces. In a world where nations use force to take what they can get, the ability of the Security Council to keep the peace depends on its having force at its disposal. This was provided for in the charter, too.

The great powers were never able to agree on the composition, disposition, and command of a permanent U.N. force, and it never came into being. On the one occasion when the U.N. went to war—in Korea—the decision was made during the absence of the Soviet Union from its sessions.

Under terms of the charter, the Security Council can act only when all five permanent members agree. At San Francisco, the United States, England, Russia, France, and China each insisted on the right to veto any decision made by the other 4, even if they carried a majority of the 11-member council with them. The U.S. delegation in particular insisted on this point, in order to protect American national interests.

The general hope in the postwar years was that the great powers would all want peace badly enough to be willing to compromise their differences and vote unanimously. In any event, it was recognized that, without

great power cooperation, it would be impossible to enforce any U.N. decision.

The veto power remains with us, not as a hindrance to Security Council action but as a symbol of the deep cleavage between the Communist and non-Communist world, the developed and the underdeveloped world.

It is easier for any nation to compromise an issue in which its own national interests are not at stake. Consequently, the U.N. has had greatest success in resolving disputes among the lesser powers. Fighting between India and Pakistan in Kashmir was brought to halt. An uneasy truce was established between Israel and the Arab States. Indonesia was granted its independence from the Netherlands. In these disputes and others among the smaller nations, the U.N. laid down the law whenever the Big Five agreed to do so.

On the other hand, cases involving one of the Big Five have proved intractable. France dealt with Indochina, and later with Algeria, on a one-to-one basis, defying interference by the U.N. The Soviet Union held that the rebellion in Hungary was a domestic affair, and no concrete U.N. action could be taken. Soviet-United States disagreement on Lebanon prevented U.N. action in that country.

It is true that England and France, permanent members of the Big Five club, were forced to withdraw from Suez in 1956, but this came about because the U.S. and U.S.S.R. were in agreement.

If the U.N. lacks strength to operate in the sphere of great power politics, what good is it?

For one thing, the U.N. has assisted at the birth of a number of new nations. These might have come into existence anyway. But the UN facilitated the process in two ways: by exerting moral pressure on European countries to vacate their colonies, and by providing economic assistance to newly independent countries.

A dozen nations which were not even in existence 15 years ago are now members of the United Nations. More will become independent this year.

More than this, the U.N. has provided a forum in which the smaller nations can be heard. This is at least a start toward diluting the unrestricted power of the Big Five. The General Assembly, where every member is represented and has one vote, is a handy ready reference to the state of world affairs. Since 1950, when the General Assembly was strengthened by the "uniting for peace" resolution, most of the problems that beset the international community have been discussed here, either formally or informally.

The specialized agencies have done a lot for human beings who have never heard of the U.N. The World Health Organization is eradicating malaria and tuberculosis, and thus raising the work capacity of millions of people who had been half sick all their lives. The U.N. Educational, Scientific, and Cultural Organization is supplying books and teachers to the schools of developing African states. In addition, the older, long established international organizations that we couldn't do without—such as the Universal Postal Union and the World Meteorological Organization—now link up through the U.N.

The existence of these agencies, and of an international secretariat located at the permanent seat of the U.N. in New York, gives some substance to that dream of a world community that has tantalized men ever since the first bigot threw a stone at his neighbor.

For some, there is disappointment that the U.N. is no more than this. They expected world government, and the U.N. gives no indication of becoming one.

Others are equally disappointed that the U.N. has not faded away. They regard it as a possible source of interference in our national politics.

Both idealists and cynics may have misinterpreted the U.N. As a treaty agreement between 82 sovereign nations, the U.N. naturally reflects the world of power politics outside it. If the Security Council fails to act under its charter authority, it is because the Big Five cannot agree what action to take together. If the General Assembly oversteps its bounds to interfere in a nation's domestic affairs, it is because a majority of the nations vote to do so. Enforcement is another matter, and there the veto applies.

The U.N. has its uses, when enough countries agree on what those uses should be. Since almost everybody agrees that it can be a great sounding board for national propaganda, it has become that. What else the United Nations can be, is up to its members.

WHAT PEOPLE AROUND THE WORLD THINK OF U.N.—ACTED AS FIRE BRIGADE, WASTE OF MONEY

What is the image of the United Nations in the eyes of ordinary people all over the world? What do they think of its accomplishments? Do they think it has made the world a better place to live in?

Associated Press correspondents around the globe recently went out to obtain answers to these questions. They focused primarily on the man on the street, avoiding diplomats and government officials.

A composite picture emerged in this general pattern:

A majority of those questioned are still optimistic about the United Nations and believe it has done some good.

"Over the years the U.N. has grown, and this means that people want it," said Basna Chaarawi, an Egyptian university student.

"I think it has worked out pretty well," said Tong Chiu, employee of an import-export firm in Hong Kong. "At least, the world has this place to try to settle differences. Without it, the nations would have no place to do so."

About two-thirds of all the hundreds questioned around the world gave answers like these.

Dissenters gave these answers:

A Polish student of economy, who asked not to be identified, said, "There is no hope whatsoever of world peace and brotherhood because Russia is an expanding nation and will not renounce its hold over the satellite countries. All compromises reached in the United Nations were attained at a cost to the non-Communist countries."

"Problems are never really allowed to be solved by the United Nations," said Antonio de Castro Araujo Silva, a Brazilian seaman. "Both sides use it as a platform for propaganda."

"It's a waste of good money and time. I'm in favor of eliminating it. I don't believe it could be improved," said Thomas D. Brooks a Louisiana employment officer.

"The United Nations has reached a futile stage," said John F. Day, an Australian businessman. "A number of nations are not cooperating and the United Nations will be frustrated by these nations."

Disputes between nations color the views of the citizens of the countries involved:

"India complained about Pakistani aggression in Kashmir," said Pawan Kapur, a student in New Delhi, India. "What on earth is the United Nations doing about it?"

"The U.N. is doing many good things," said Mustafa Osman, a gardener in Cairo, Egypt, "but remember it created Israel. If there was no U.N., there wouldn't be an Israel or a million Arab refugees."

The advantages of the United Nations as a forum where nations can debate their differences were noted by many of those who admire the organization—

"The U.N. is better than no U.N.," said a woman librarian in Tokyo. "It has brought open discussion of world issues before an international forum. It also is an advancement in that it provides a place for new, young, and backward countries to meet, to cooperate, and become stronger."

Critics and admirers alike agreed that the United Nations had been useful in halting some wars and that the probabilities of continued peace today are greater because of it—

"The U.N. has helped in many crises, Suez and Vietnam, for example," said a Japanese clerk.

Lars Nenander, a Swedish policeman, and former member of the U.N. Emergency Force in the Gaza Strip, said: "I believe the U.N. avoided, or let's say postponed, a bigger scale war in 1956 (in the Middle East). The U.N. might be able to stop the civil war in Algeria if France would permit."

"The U.N. did not prevent fighting in Korea or Budapest," said a Polish hotel clerk. "But it has prevented war in the Far East."

"The U.N. has acted as a fire brigade," said Stockholm Restaurant Manager Gunnar Wiberg. "The speed and the efficiency are impressive. The U.N. is not to blame for the failures. The responsibility must be shifted to the nations concerned."

Friends and foes of the United Nations agreed that the organization's greatest problem is misuse of the veto in the Security Council:

"The U.N. hasn't made much progress because the veto is always there to be used to prevent something being done," said Ted Dolly, a London telephone operator.

"The veto power was not a bright idea," said Hans Frese, a Berlin salesman. "A simple majority vote would be better."

"The organization should be strengthened," said a Warsaw bookkeeper, "but I do not see how this can be done unless the veto is abolished."

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

Appendix

Orchard Picnic Address by Senator Byrd of Virginia

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES

Tuesday, August 30, 1960

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered at my Annual Orchard Picnic, at Berryville, Va., on August 27, 1960.

There being no objection, the adress was ordered to be printed in the RECORD, as follows:

SPEECH BY SENATOR HARRY F. BYRD AT HIS ANNUAL ORCHARD PICNIC, BERRYVILLE, VA., AUGUST 27, 1960

This is the 37th year I have had the great pleasure of greeting my friends at these annual picnics.

Today we pay tribute to Walter Hough, chief entomologist at the Fruit Research Laboratory for this area. I know of no man who has rendered greater service during the 49 years he has served the fruitgrowers so faithfully and well.

It so happens that I planted my first apple orchard 57 years ago, so he and I have grown up together in the apple business.

I had faith in the apple business then and have had through the years. I am still planting on a replacement basis. In the last few years I have pulled out over 25,000 trees, which were not productive or profitable varieties.

We have our problems and they are serious, but we are better prepared to meet them because the apple industry receives no subsidy, bonus or favor from the Federal Government. We stand on our own feet.

When I pass on and my sons and grandsons and maybe great-grandsons continue to operate the apple business, I hope they will do all they can, as I have done, to resist any and all efforts to subsidize and control the apple industry by the Federal Government.

I want to tell you something of my recent trip to Switzerland. It was very educational and at the same time most enjoyable. I went with my friend, Blackburn Moore.

On the day the Democratic candidates were nominated at Los Angeles, we had a summit meeting on the highest mountain in Switzerland—over 14,000 feet. We were enjoying the cool air there and were happy to miss the hot air at Los Angeles.

While in Switzerland we were the guests, for a part of the time, of Mr. and Mrs. Henry J. Taylor. He is our American Ambassador whose home is at Charlottesville.

We saw Switzerland at its best. I was greatly impressed with the cordiality of the Swiss people toward the United States. When we traveled with the Ambassador in his car flying the American flag, the people would clap their hands and smile, indicating their friendliness.

The Swiss has never received a dollar of American aid, and would not take it if we offered it to them. Perhaps that is why they like us so well.

I venture to say that in many areas where our contributions have been sent, instead of applauding our flag, they would hiss and condemn it and shout their disapproval, as has been shown in recent instances.

It is time that America learns that we cannot buy friendship with dollars. So far, we have expended over $80 billion in foreign aid, and much of it has been wasted and squandered in the most shameful fashion.

Incidentally, all of this $80 billion has been added to the public debt for future generations to pay.

The last foreign aid bill was more fantastic than any other because it included $100 million for the Congo, where there has been wholesale rape of the white women of Belgium and the killing and murdering of the Belgians who have accomplished such development as there is in that area.

It is peculiarly difficult to understand this. When the Senate passed this bill, the Congo was in the act of defying the United Nations; but this shows to what extremes fallacious policies can be extended.

I was deeply impressed with the Swiss Government. It is a combination of direct and representative democracy. Emphasis on local and Canton rule makes it close to pure democracy. I had a long conference with the President and his Council.

The executive power of the National Government is placed in a 7-man board known as the Federal Council. The Council is similar to our National Cabinet. The President is chosen from among the members of the Council, and serves 1 year.

Their taxes are reasonable. They have no debt. But, at the same time, they maintain a well trained army of 600,000 men out of a population of 5 million, and have a powerful air force with jet planes.

The Swiss people have lived amid wars on the European Continent for generations, without permitting violation of their territory. The mighty Hitler had this in mind during World War II, but he did not attempt it. The Swiss have a remarkable record of permitting no interference from other nations no matter how powerful.

Swiss law provides that when a member of a family is sick or needs help, the others in the family must take care of their own as far as possible. There is no Federal public assistance such as we have developed in this country.

Swiss bankers are perhaps the ablest in the world. I was deeply interested in my conversations with them. The economy, the business and the Government of Switzerland are based on free enterprise and individual liberty.

We landed at Zurich after a flight of just 6½ hours from New York. We went to Geneva, and on to Bern where we were guests of Ambassador Taylor. From there we went to Lucerne and St. Moritz. We drove back to Zurich through Liechtenstein and Austria.

I wish everyone could visit Switzerland. You would see some of the most superb scenery in the world and the hotels are wonderful. You would become acquainted with fine sturdy people. You would be inspired to fight for individual liberties and States rights.

These liberties and rights are among the fundamental principles which have made our country, in a brief span of time, the greatest democracy in all the world. These principles must be protected and preserved; and there are serious indications that we need to be reminded of this.

I say this with all the sincerity of which I am capable: if we undermine our fundamental principles, and impair our fiscal solvency in the next 25 to 30 years as we have in the past quarter of a century, I cannot believe our democracy will survive.

Perhaps it is the inspiration of Switzerland that leads me to some observations which I believe should be made today. Certainly, there is an element of contrast. This leads me to comment briefly about what has been going on in this country.

The people of Virginia have been extremely generous with their confidence in me. I have held public office almost continuously for more than 40 years. They have allowed me to represent them in the Senate of the United States for nearly 30 years.

I think I know the views of the citizens of our great Commonwealth, and the principles for which they stand, and I have always fought for them. I shall never stop fighting for them. It is a source of deep regret that I have been unable to do more.

I say this as I think over the trends toward centralization in the Federal Government over the past 30 years; and we must keep this trend in mind as we attempt to act intelligently on public matters which will affect the lives of all of us in the future.

Perhaps the two greatest foundation stones of our form of government are individual liberty and State sovereignty. These are the greatest deterrents to centralized government. Centralization of government leads to socialism.

Our great free enterprise system depends on individual freedom and States rights. Free enterprise will diminish as centralization of government and socialistic trends increase. These are vital truths to keep in mind in our efforts to preserve our form of government.

Looking to the future, against the background of trends over the past 30 years, there is reason for concern; and more important there is need for awakening. The trends have been toward centralization of government with the inevitable fiscal and socialistic deterioration.

We have had Federal deficits in 24 of those 30 years. Only 8 of the 24 deficits occurred in war years. There have been 16 peacetime deficits. And during the 22 peacetime years the increase in the Federal debt has averaged more than $2 billion a year.

In these 30 years the Federal debt has been increased by $270 billion. It is now more than $286 billion. And in these 30 years interest on the Federal debt has cost the taxpayers of this country more than $114 billion.

Federal taxes 30 years ago took only about 4 percent of the national income; today they are taking nearly 20 percent. And with these increases in debt and taxes the value of the dollar has been reduced to less than 47 cents.

Along with this fiscal deterioration has come continuous centralization of government. Federal programs are embracing an ever-widening area of our economy and endeavor. Federal subsidies are going out through all kinds of loans, grants, and payments.

There are now Federal subsidies for business, industry, private finance, agriculture, transportation, power, housing, health, education, States, localities, and individuals.

Subsidies are under bureaucratic control; to take them means giving up a measure of independence and freedom.

Some 40 million people will receive payments from the Federal Treasury this year totaling some $40 billion, including social security. With their families these 40 million people could easily reach a number equivalent to half of our population.

Federal payments to people on so-called public assistance rolls are now totaling more than $2 billion a year. Thirty years ago such payments were unknown. Over the 30-year period Federal payments through programs of this type have totaled about $25 billion.

The Federal Government is now subsidizing housing in the form of grants, loans, guarantees, insurance, etc., to a total of more than $10 billion a year. The first significant Federal program in housing was the HOLC established in 1933. Since then gross Federal housing subsidies have exceeded $110 billion.

Federal payments through various programs in the field of education are now totaling over $1 billion a year. Thirty years ago the total was less than $10 million. During the 30-year period Federal payments in various forms of educational benefits have totaled about $25 billion.

Federal payments to States, localities, and individuals under numerous health programs now total $500 million a year, exclusive of huge direct Federal expenditures for related programs. Thirty years ago Federal activity in this field was negligible. Over the 30-year period Federal payments to States, localities, and individuals in the field of public health have totaled $2¼ billion.

Thirty years ago there was a mere handful of Federal programs for payments to States, localities, and individuals, costing about $100 million. Now there are at least 90 of these payment programs, and expenditures total $9.6 billion a year.

The programs I have cited are domestic-civilian, with little or no relation to military preparedness or foreign aid. They do not include tremendous subsidy areas in the fields of agriculture, industry, merchant marine, power, transportation, small business, etc.

Think of the increases I have mentioned in terms of percentage, and compare them with an increase of about 45 percent in our population over the period, an increase of about 245 percent in our industrial production, and an increase of about 432 percent in our national income.

When you analyze Federal programs in search of expenditures with subsidy aspects, the results are astonishing. It is disheartening to realize what this means in terms of centralization of government and trends toward socialism.

Thinking of Switzerland's fine example of sound democracy at work, at this 37th picnic I want to emphasize my belief that our great democracy can and should live throughout the ages.

I have confidence in our future if the citizens of the Nation will oppose those things which are destructive of the principles underlying our form of government, our free enterprise system, our individual liberties, and our national solvency.

A City With a Future

EXTENSION OF REMARKS

OF

HON. JOHN YOUNG

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 25, 1960

Mr. YOUNG. Mr. Speaker, I am very proud to bring to the attention of the Congress that there is located in the 14th Congressional District of Texas, which I have the honor to represent, one of the most progressive and thriving cities to be found anywhere in the United States. I refer to the city of Seguin, the county seat of Guadalupe County, Tex. This is a city of rapid growth, of great industrial potential, and exceptionally broad economic base.

The August issue of the Texas Industry, the official magazine of the Texas Manufacturers Association, is dedicated to the city of Seguin and contains, among other things, an excellent article describing the many economic blessings enjoyed by this wonderful city, and points out the exceptionally bright future which it holds.

Under unanimous consent I insert this article in the Appendix of the CONGRESSIONAL RECORD, including extraneous matter:

SEGUIN

Seguin led the way when America's first successful satellite blasted off Cape Canaveral on January 31, 1958, to orbit the earth every 114.8 minutes. For the nose cone of that bullet-shaped Jupiter C missile was made of laminated Fiberglass woven on the looms of a Seguin industrial plant, the Coast Manufacturing & Supply Co. Integral parts of that satellite, Explorer, also were comprised of elements originating at the south-central Texas plant.

Big news? Not to the industrial cosmopolites of bustling Seguin.

They knew the Explorer's nose cone and component parts weren't the first Seguin-manufactured products to orbit the earth. Everything from canned goods and hats to furniture and steel had already found markets throughout the world.

Situated 33 miles east of San Antonio and 55 miles southwest of Austin, the progressive Seguin community is united in its efforts to pave the way for the establishment of more industries in its area. Its 15,000 city residents and the 50,000 residents in the immediate labor and trade territory have long recognized the value in the slogan: "Seguin is good for industry, and industry is good for Seguin."

Nature, a cooperative citizenship and city government, and an advanced Seguin Industrial Foundation have combined to offer a perfect formula for industry. Important elements of this formula include a good town to live in, a large and friendly labor supply, favorable geographical location, excellent transportation and freight systems, and, last but not least, a fine public attitude toward industry.

The city administration, for example, had as one of its election planks the promise to assist new and current industries in any way possible. Mayor Wintford Owen is an outspoken advocate of increasing industry for Seguin, and he is taking a leading role along these lines. Other men who have long taken leading roles in the Seguin industrial picture are included in the membership of the Seguin Industrial Foundation, an organization dedicated to continuing, successful industrial development of the Seguin area. They subsequently purchased a 40-acre industrial plat adjacent to the Southern Pacific Railway lines, and today the railway is committed to providing rail spurs for each additional industry requiring these added shipping facilities.

A variety of developments has since taken place within the tract.

A furniture factory, a large cotton warehouse, and a continually expanding Fiberglass plant have taken over various sections of the plant. Mr. R. E. Merritt, president of the Coast Manufacturing & Supply Co., recently announced a $300,000 expansion program for the Seguin plant. He further stated, "The employee-management relationship in our plant here in Seguin is the best we've ever seen. Choice of Seguin for locating this plant has proven a very happy one for us. The local relationship of our plant is excellent, the attitude of the people is wonderful, and the spirit of the town is very good. I had enough faith in Seguin to buy stock in the Seguin Industrial Foundation. I've never been more well pleased."

Louis Saegert, current president of the Seguin Industrial Foundation, explains, "Our area's potential for caring for more industry is so great that we have a long program ahead of us before we even scratch the surface."

The progressive board of directors of the Seguin Industrial Foundation includes a good cross section of area business and professional men. They are Clark Core, D. W. Reneau, Fred Fuhrmann, Andrew Traeger, and Laud Walters, industrialists. Members who are bankers include Walter Fey, Leo Freis, and Oscar Weigang. Retainers are Bernard Lenowitz, Louis Glaeser, H. E. Stautzenberger and J. D. Jamison. Remaining members include W. L. Ray and Paul Willmann, insurance, Stan McKenzie, advertising, E. W. Bartholomae, retired businessman, and attorney Saegert.

Seguin has been designated as a labor surplus area by the Texas Employment Commission. In fact, Seguin could immediately staff a new industrial plant with some 3,000 employees, or a combination of new industries requiring that many workers.

Seguin's reputation as being good for industry is beginning to be accepted throughout the Nation. A recent report by the General Electric Co. revealed that firm had considered only two Texas cities for construction of a new million-dollar plant. One of those cities under consideration was Seguin, the other Houston.

Seguin is a beautiful, popular city located along the winding banks of the ever-flowing Guadalupe River. Seguin's geographical location proves an excellent one for most industries, being very close to large market areas.

Railroads and superhighways throughout Seguin and Guadalupe County provide excellent transportation for the shipping of products.

Other industrial attractions in Seguin include:

A favorable tax situation.

An unlimited water supply is available.

An unlimited power supply is available.

A big labor market exists.

Two recent exhibitions of Seguin's capabilities, meanwhile, were the successful passing of an $875,000 school bond issue and a $600,000 city sewer bond issue. Both issues were approved by Seguin voters within a 6 months' period.

The educational facilities include a completely new, model elementary and high school system. Over $2 million has been spent during the past decade to build new schools in the Seguin Independent School District. The school system comprises: Five elementary schools which had a 1959 enrollment of 2,048, 2 high schools with an enrollment of 1,438, a parochial school and a rapidly growing senior college, which is Texas Lutheran College.

Seguin recreational facilities are the pride of this end of Texas. In fact, within the city of Seguin itself there are 190 acres of beautiful parks.

An abundance of fishing and hunting for quail, dove, duck, deer, turkey, bass, catfish, crappie, and perch is available in the Seguin area.

Farsighted developers have taken advantage of the Seguin area's abundance of natural resources for recreational facilities. These developers have built a semiresort area near Seguin with the emphasis on leisurely living and wonderful recreational facilities.

The Richmond Development Co. has developed an island in Lake McQueeney 5 miles

west of Seguin. The company has captured the imaginations of south Texas residents by naming the area Treasure Island. Beautiful homes—ranging from modern sprawling ranch-style homes to oriental and early American—winding roads, canals waterfrontage for every home and a beautiful clear blue lake with a constant water level are features of the luxurious island.

Three modern medical clinics and a 26-bed hospital, 12 physicians and surgeons, and 6 dentists comprise the medical protection for the Seguin area. There is also a city and county health department with a staff of two doctors and one nurse.

As far as the housing situation is concerned, Seguin has 40 apartment houses and several hundred rent houses. During the past year, some 70 houses were constructed, including 95 percent on the inside of Seguin city limits and 5 percent outside the city limits. Local living quarters are also aided by nine hotels and motels in Seguin which have a total room capacity of 115. There are also some 21 eating establishments with a total seating and eating capacity of 300.

Another organization playing an important role in helping to maintain a good industrial climate in Seguin and Guadalupe County is the chamber of commerce.

The organization, with Jack Stewart proving to be an industrial-minded manager, was highly toasted by last year's president of the South Texas Chamber of Commerce in these words: "I pay tribute to the accomplishment of the Seguin and Guadalupe County Chamber of Commerce in helping to advance its area industrially in a diversified series of strategically important local industries."

One of the essential ingredients in Seguin's industrial development is the support of Seguin's banking institutions. Knowing the full value of industry to a community, the three Seguin banks have often been instrumental in obtaining industry. Two prominent Seguin families head the city's banking and financial institutions. The industrial-conscious Henry Donegan family heads the First National Bank. Henry Donegan, Sr., is president of the Nolte National Bank while son John is the chief executive officer of the First National Bank. Henry Donegan, Jr., is president of the Seguin Savings and Loan Association, an institution that lends great weight to the acquisition of industry. Seguin's other banking family is the H. H. Weinert family. The Weinert family operates the Seguin State Bank & Trust Co. Mrs. Hilda Weinert was recently elected Democratic national committeewoman from Texas, a position she has held previously. The influence of these two prominent families and their financial institutions has been an important factor in the Seguin industrial growth story.

The Seguin industries run the gamut of diversification.

Those current industries include:

Briell-Rodgers Cotton Goods Co., work clothing; Coast Manufacturing & Supply, Fiberglass cloth; Coca-Cola Bottling Co., soft drinks; Crump's Woodwork, door frames, window units and other millwork, and the Faber Furniture Co., furniture manufacturing.

Also, Guadalupe County Publishing Co., publishing and printing; Guadalupe Locker Storage Corp., fresh meats; Guadalupe Tortilla, tortillas; and E. L. Haner Co., leather products. Also, Hey's Potato Chips Factory; Lardies Interiors, drapes, custom household furniture; Palm Braids Products Corp., straw hats; Rank Sheet Metal Co., metal fabrication, and Ready-Mix Concrete Co.

Also, Seguin Baking Co.; Seguin Cotton Oil Co., poultry feeds; Seguin Milling Co., wheat flour, corn meal, livestock and poultry feeds; and Seguin Publishing Co., publishing and printing.

Also, Seguin Venetian Blind Co., Seguin Welding & Machine Works, small drilling rigs; South Texas Printing Co., commercial printing; Structural Metals, Inc., steel reinforcing bars, and Texas Pecan Co., shelled pecans.

And including Frito Co., Mexican food and bean dip; Traeger Milling Co., corn meal and prepared feeds; United Cotton Goods Co., men's duck, coats, pants, smocks, and so forth; D & D Bumper Works, steel fabrication, buildings, truck bumpers, and Stahmann Mobile Structures, homes, offices, buildings, and beach cottages.

Seguin Milling Co. is the oldest industry in Guadalupe County. The mill, which carries the "White House" label, has the world's shopping counters as its market. Seguin men playing important roles in the growth of the mill include Joe Gibbs, Walter and Eugene Nolte, J. T. Holmes, H. Troell, Sr., Otto Troell, Edgar Nolte, and E. B. Camiade.

Faber Furniture Co. currently produces between 300 to 350 furniture suites for Sears' southwestern area per month. The founder is George Faber.

The Frito Co., founded by the late William Chambers, produces a complete line of Mexican foods and specialty items which total up to 17 different products.

Seguin Baking Co. is another industry that was envisioned, planned, and worked by a Seguin family, the Keller family.

Reneau Bros. Produce Co.'s advance from a few barnyard chickens to the opening of a $350,000 poultry plant this year.

Coast Manufacturing & Supply Co. is currently in its sixth year of operation in the Seguin area. Almost $1 million have already been invested in the plant, and more expansion is being blueprinted for the future.

Structural Metals, Inc., has an employment of 160 men and a half-million-dollar payroll. The backbone of this organization is a host of progressive Seguin stockholders. The plant is operated by President B. B. Bunting and Executive Vice President Marvin Selig.

It's been pointed out that the surface to Seguin's industrial potential hasn't been scratched. But members of the Seguin Industrial Foundation are planning and working night and day to spread the Seguin gospel. And more and more industries are eyeing Seguin as a home for their new plants.

Address Delivered by Senator Harry F. Byrd, of Virginia, on the Acceptance by Him of a Distinguished Service Award

---

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 30, 1960

Mr. THURMOND. Mr. President, on August 29, 1960, the Senator from Virginia [Mr. BYRD] delivered a magnificent address before the Section on Insurance, Negligence and Compensation Law of the American Bar Association. The address is worthy of the attention not only of the lawyers of the country but also of the people of the United States as a whole.

Senator BYRD is one of the greatest citizens in our Nation today, and I feel that any statement by him is worthy of note by the people of this country.

I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY SENATOR HARRY F. BYRD, DEMOCRAT OF VIRGINIA, ACCEPTING DISTINGUISHED SERVICE AWARD, BEFORE THE AMERICAN BAR ASSOCIATION SECTION OF INSURANCE, NEGLIGENCE, AND COMPENSATION LAW, SHOREHAM HOTEL, WASHINGTON, D.C., AUGUST 29, 1960

I am honored by this award from the American Bar Association Section of Insurance, Negligence, and Compensation Law. I am not a lawyer, but my father was; and from him I first learned the sources of sovereign power, the principles of our system, and the reasons to respect the law.

I want you to know that, coming from you and coming in these times, this occasion is doubly rewarding. You are an organization of many of the Nation's finest and most responsible citizens. And these are times when friendly public reference to a conservative is rare indeed.

I am a conservative; I have been called unreconstructed. I wear the label with pride if it marks me as one who fights for the fundamentals on which we have developed the finest system of government ever known. I fight for these fundamentals because I believe in them.

I believe sound progress should be the primary purpose in every man's life. Sound progress is the source of strength. But progress is not sound unless it is based on sound financing; this is another application of checks and balances which have been so useful in our Government.

I believe that in the United States we are blessed with all the elements for sound individual progress and, therefore, for national progress. We have the people, resources, climate, and geography; and our system of government was designed for freedom, including freedom to work with incentive.

I believe the character of our governmental system stimulates enterprise and strength. It is a system characterized by local autonomy, State sovereignty, and a central government in three separate, coordinate branches—each limited in power and authority by the Constitution.

I believe that under our system we are the greatest and most productive Nation in history. The principles on which we have thrived must be preserved, and they must be defended wherever they are attacked. They guarantee our freedoms, nourish our free enterprise, and make sound progress possible.

I believe it is the sound productivity and strength developed under this system that have brought us to world power in relatively for generations. Historically, lives of nations are measured in hundreds of years. I want the life of this Nation to be the longest and the best.

I believe continuing centralization of government will destroy our freedoms and our strength. We have already gone too far. Excessive centralization inevitably leads to excessive central edict and regulation, and to excessive Federal competition and taxation. In short, it produces the evils of State socialism.

I believe our people want our system perpetuated and strengthened. Basically, the requirements are: simple honesty and individual initiative; self-reliance and willing work; constructive production and free competition; and progressive development and sound financing.

I believe that with responsible citizenship, good government and fiscal soundness there would be no fear for the future. But without these, there will be neither solid progress nor security with military preparedness. I think we face these alternatives today.

We are in a new era of atomic energy, rockets and space. Our population is increasing. Our resources are great. Our pro-

ductive know-how and capacity are unsurpassed. In such conditions representative democracy with free enterprise should thrive soundly for the good of all mankind.

But I have a feeling of anxiety, and I suspect most of you know it too. Our Government is being challenged from abroad and undermined at home. This Nation is showing signs of weakness when it should be strongest. The reasons run back over 30 years and they can be documented.

Our strength is being sapped by the paternalism of Federal bureaucracy grown too big, usurpation of power by the Warren court grown too mighty, and force of labor leaders grown too arrogant. These are undermining our system, changing our attitudes, and hobbling our will for freedom.

We have deficits and threats of continuing deficits; we have debt, and inflation; we have foreign trade balance trouble and dwindling gold reserves; there are Communist gains in their race against the free world in the scientific, military, foreign relations, and economic fields. These are serious weaknesses which must be reversed.

I have been a Member of the U.S. Senate since 1933. I have seen the reasons for most of these weaknesses develop. I have tried to prevent them. I wish I could have done more. I am still trying.

It may be of interest to you to look briefly at the 30-year record since 1930 for signs and areas of weakness; and it should be noted that in this period our population has increased about 45 percent; industrial production has increased 240 percent; and national income has increased 432 percent.

But, in the same period the number of Federal agencies has increased 100 percent; Federal employees have increased 300 percent; Federal debt has increased 1,700 percent; Federal tax collections have increased 1,800 percent; and Federal expenditures have increased 2,300 percent.

Thirty years ago Federal programs for grants to States and localities could be counted on the fingers of one hand, including those for highways and land grant colleges. Federal expenditures through these programs at that time totaled about $100 million.

Now there are 60 listed Federal programs for grants to States and localities, and Federal expenditures through them are totaling $6.4 billion. And while Federal grants to States and localities have been increasing 6,300 percent, State and local debt has been increased $40 billion, or nearly 300 percent.

Through programs of grants to States and localities—and payments to individuals—Federal subsidies are now flowing to business, industry, private finance, agriculture, transportation, power, housing, health, education, States, localities, and individuals.

Nearly 40 million people will receive payments from the Federal Treasury this year totaling some $40 billion, including social security. With their families these 40 million people could easily reach a number equivalent to half of our population.

While these conditions have been developing over the past three decades, private debt in the United States has been increased nearly 250 percent; inflation has reduced the purchasing power of the dollar more than 53 cents; the value of the dollar is now 46.9 cents by the 1939 index.

It is a mistake to blame all this fiscal deterioration and socialistic growth on war. The combined duration of World War II and the Korean war was 8 years. In the other 22 years without war there were 16 Federal deficits, and the increase in the Federal debt averaged more than $2 billion a year.

The total annual cost of the Federal Government has gone up nearly $16 billion since the Korean war. This is an increase of nearly 25 percent. It may surprise you to know that the great increases in this period were not for military and foreign aid. They were in domestic-civilian programs.

Federal expenditures for these domestic-civilian programs have increased 86 percent in 7 years; they are now totaling $36 billion. These programs too frequently involve multi-year or permanent commitments for heavy spending in the future, and increases in these programs are continuing.

These are some of the signs of weakness, socialism and centralization to be found all around us—but not all. The Federal Supreme Court has undermined our system of government at all levels. This can be traced back to the Roosevelt administration when the President started packing the Court.

Judicial usurpation of power has reached a peak with the Warren court. Its decisions have invaded homes, handicapped police protection, disregarded State sovereignty, interfered with the authority of the executive branch of the Federal Government and usurped the powers of Congress.

You are familiar with the case documentation. For my purposes today, I rely on the chief justices of State supreme courts throughout the Nation. In their 1958 conference at Pasadena, they found reason to urge the Warren court to restrain itself in the exercise of vast power.

The action was taken in the 38 to 6 adoption of a report by 10 eminent jurists. The report was based on intensive study of recent decisions indicating general trends in the area of Federal-State relationships. I shall quote only two brief excerpts. The report said:

"Second only to the increasing dominance of the National Government has been the development of the immense power of the Supreme Court in both State and national affairs. It is not merely the final arbiter of the law; it is the maker of policy in many social and economic fields."

And then the report said further: "It has long been the American boast that we have a Government of laws and not of men. We believe that any study of recent decisions of the Supreme Court will raise at least considerable doubt as the validity of that boast."

It seems to me that there can be no doubt that the Warren Court is undermining our system of government, contributing to centralization of power and authority; and thereby it is sapping our national strength. This makes us more vulnerable to destructive forces at home and abroad.

From experience we have learned that the more government is centralized, the more easily it is influenced—if not yet controlled—by leaders of organized pressure groups. Certainly the political target areas and the ruling officials of the government are more concentrated.

We have learned that the more government is centralized in Federal bureaucracy at Washington, the more it is susceptible to the arrogant influence of labor leaders. Call the roll, Reuther, Hoffa, McDonald, and so on. Make no mistake; these are ruthless men.

Even now there is talk of the Federal Government outlawing State right-to-work statutes. In this connection, think of this fact. In the past 30 years strikes in this country have prevented nearly 3 million man-years of work; that is a loss of nearly 3 million man-years of pay, and nearly 3 million man-years of production.

I have always conceded to good citizens in the rank and file of labor unions the privilege of organizing. I have conceded to legitimate labor unions the privilege of collective bargaining when they represent their members. But, I also concede to men and women the right to work if they choose.

You have seen the parade of some of the labor leaders before the McClellan committee. You have seen them make a mockery of the fifth amendment. Wherever and whenever I could, I have fought against giving such labor leaders power and placing them in position of Federal influence.

Power breeds power, and labor leaders are insatiable in their demands for special privileges and immunities. Federal nullification of all State right-to-work laws is high on their present list of demands.

They want the Federal Government to force membership in a union as a condition of employment. Nearly 50 million, or more than 70 percent of those employed in the United States are not now members of the big national and international unions.

Generally speaking, State right-to-work laws provide that the right of individuals to work shall not be denied on account of either membership or nonmembership in labor organizations.

The Taft-Hartley Act recognizes States rights in this field. Labor leaders want this provision repealed. Without it we could expect the Warren court to strike down every State right-to-work law in the country.

Twenty States to date have enacted right-to-work laws, eight of them with constitutional amendments adopted by referendums. If they are not desired, the people in the States who approved their enactment could bring about their repeal.

But the labor leader pressure is at the Federal level. They want Federal action for wholesale nullification of the States rights these laws represent, and the individual liberty they protect.

I regard the right to work as I do the right to life, liberty, and the pursuit of happiness. States have the right, the responsibility, and the duty to protect this fundamental freedom. This is my position and I shall fight for it.

I am the only Member now in the Senate who voted against the Wagner Labor Act of 1939, giving special privileges to labor unions and therefore to their leaders. I voted for the Taft-Hartley Act and against the Truman veto. I supported strong labor legislation last year, and I will do it again.

When irresponsible labor leaders have the power virtually to shut down the country, our national security is imperiled. When they have the power to stop production and wages, our economy is impaired. When they have the power to force wage increases without increased production, they create inflation.

You have been good enough to mention my 40 years in public service. I thank you again. I shall try to merit your confidence in the future. In conclusion, let me say that I think our system of government is being menaced by three subverting trends which must be stopped.

These trends are: (1) Increasing Federal paternalism with fiscal deterioration; (2) increasing usurpation of power by the Warren court; and (3) increasing arrogance of labor leaders in their influence over Federal authorities. Reverse these, and I have no doubt about our strength to meet any foreign challenge.

I pledge my unrelenting effort in this direction. But these changes will not come in an attitude of tolerance. There will be no status quo. There will be change.

It is up to all who believe in our system to fight for progress without destroying the fundamental principles of our Government which in a short space of time have made us the greatest Nation in all the world.

Hon. Edward H. Rees

SPEECH

OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 29, 1960

Mr. HEMPHILL. Mr. Speaker, I thank the gentleman for yielding.

I want to associate myself with all the remarks which have been made about ED REES. I think so often, on the American scene today, the American people fail to appreciate the kind of service and the kind of dedication a man gives and has when he serves his nation as has our beloved gentleman from Kansas. Those of us who came to the committee early in our career called him affectionately "Mr. Chairman." I see in him a great lawyer, a great statesman and a great legislator; and I think of the old adage, "We are part of all that we have met." So that, as we go through life, with whatever burdens we bear, we will be better men, better citizens, and better legislators for having known this distinguished gentleman.

I wish for him and Mrs. Rees every happiness deserved by a great citizen and his noble helpmate, conscious of the fact that this country is the better for his service, these generations inspired by their exemplary lives.

Problems of the Airlines

EXTENSION OF REMARKS
OF
HON. NORRIS COTTON
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Tuesday, August 30, 1960

Mr. COTTON. Mr. President, a most thought-provoking article on the problems of the Nation's airlines appeared in the New York Times for Sunday, August 28, 1960. The article sets forth some of the problems which plague the airlines and which may have a profound effect on their future. As a member of the Senate Aviation Subcommittee, the article was especially interesting to me, and I believe it merits the attention of the entire Congress.

Therefore, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

U.S. AIRLINES FACE DIFFICULT FUTURE AS LOSSES MOUNT—BIG PROBLEM IS FINDING NEW BUSINESS TO MEET SOARING COSTS—WALL STREET WARY

(By Robert E. Bedingfield)

The Nation's airlines, emerging from a spell of stormy financial weather with less damage visible than had been expected, still have plenty of rough flying ahead.

One of their biggest problems for the next year or two will be finding enough additional business to meet the greatly increased costs that they have incurred by their plunge into the jet age.

With faltering Capital Airlines about to save itself by merging with United Airlines, industry observers are inclined to feel the worst may be over.

Those who feel this way believe Capital's narrow escape from bankruptcy will chasten the regulatory authorities. They believe the authorities may feel constrained to adopt a more realistic attitude toward routes, as well as rates, and that things will get better from now on.

Things could hardly get worse.

Six of the twelve domestic trunklines had operating losses in the first half of this year. Despite a 9.1-percent increase in gross revenues to $937,835,131, collectively the 12 trunklines showed an operating loss of $4,863,096, in contrast to last year's operating profit of $58,907,146.

ADVANTAGES QUALIFIED

For the domestic air traveler, the industry's present plight promises a few years of eager service at less than cost, perhaps. But any satisfaction over such a windfall, according to students of transportation, should be qualified by these reflections:

What the passenger may save as an air traveler he may more than lose as a taxpayer, considering the commitment of the country to a lavish network of airlines at almost any cost in subsidy.

Service at less than cost, given by the railroads, finally resulted in a minimum of service as freight revenues dwindled. The airlines have not yet built up freight revenue enough to support passenger deficits, so they may reach the point of deterioration of service a lot quicker than the railroads did.

FARE RISE APPROVED

The airlines now derive 6 percent of their revenues from freight and the rest from fares. They have been working diligently to obtain more freight, and a number of lines are converting former first-class passenger planes to freight service. However, the full potential of the freight market is not expected to develop until an economical new design of cargo aircraft is developed.

The Civil Aeronautics Board, which has the responsibility for promoting the industry as well as for regulating it, recently approved what amounts to a 5-percent increase in fares and announced that it would allow the industry to set rates that would permit it to earn an average "fair" return of 10.5 percent on investment. However, no carrier is expected to achieve such a result this year. In fact, the last previous time the industry showed such a return was in 1955.

One member of the Civil Aeronautics Board has proposed an expedient for restoring profits to the airlines. This method has been given a thorough trial by a number of railroads. The idea is to aim fares and services at getting passengers out of their automobiles. The railroads that have tried this have been uniformly unsuccessful and have wound up moving just as few passengers in bright new cars as they did in dingy cars.

The CAB Commissioner who so strongly favors the promotional fare attack is Alan S. Boyd. Mr. Boyd concedes that the airplanes have taken about all the passengers they can hope to get from the railroads and the buses. In fact, the airlines now handle more business in intercity service than the railroads and buses combined.

The remaining riders on buses and trains, Mr. Boyd says, "today either want to use those modes of transportation or cannot reach their destinations by commercial air carriers."

FAST SERVICE BACKED

Mr. Boyd's formula for luring the private automobile driver into the airplane is fast, ontime service, with no frills. This is what the airlines' coach services were designed to provide, but the airlines are finding that the coaches, instead of dragging people out of their automobiles, are dragging them out of the higher-fare first-class seats.

This has developed to the fullest extent with the industry's conversion to jet airliners, which, because of their speed and size, can carry three times as many passengers over a given period as the latest models of piston planes.

In July the trunk airlines flew 2.2 billion first-class seat-miles and 2 billion coach seat-miles. However, only 55.44 percent of the first-class capacity was occupied, while 70.43 percent of the coach capacity was sold.

Wall Street has taken due note of the airlines' deteriorating financial status and so have investors. Albert H. Gordon, senior partner in Kidder, Peabody & Co., stresses the flight of capital from the airlines, particularly on the part of the investment trusts.

"A compilation of 67 investment management groups," Mr. Gordon observes, "showed substantial liquidation of airline holdings in the first 3 months this year by trusts previously owning such shares."

Mr. Gordon notes that among the more prominent transactions by the trusts was the liquidation of 131,300 shares of American Airlines by 8 funds, 5 of which sold out their positions completely.

CONFIDENCE SHAKEN

Moreover, Mr. Gordon stresses, investors' confidence has been so shaken that, with the exception of Northeast Airlines, now in merger discussions with Trans World Airlines, the common stock of every trunk line recently was selling at varying discounts from book value. This has never happened before in the industry's history, Mr. Gordon says.

Some industry experts say that arithmetic shows that what the airlines need is not more seats on more routes but fewer seats—at least fewer empty seats—and perhaps fewer routes. The last year that the airlines generally made money in habit-forming amounts was 1955, when 64.05 percent of all the seats that were flown were filled. This year, with less than 60 percent of all seats occupied, the industry has been losing money at an alarming rate.

Whether the good sense of cutting back service to meet demand can overcome local pressures and empire building on the part of airline executives and Willard's law, which states that no executive voluntarily merges himself out of a job, is what investors are waiting to see. In any case, more and more Wall Streeters are taking the view that the industry will continue to be plagued by insufficient earnings and that some other weaker carriers may disappear or be forced, like Capital, to take the merger route.

The problem in essence continues to be: Too many airlines are flying between too many places, many of them the same places.

OVERLAPPING ROUTES

For example, today nine airlines fly between New York and Washington. Five lines serve Chicago and New York and six connect Boston and New York. There also are six serving Detroit and New York and seven Tampa and Miami.

Whereas at the end of the war only one line flew between Detroit and Pittsburgh, today four compete for the traffic. Three lines serve New York and Los Angeles and three serve New York and San Francisco.

Remove the Patent Monkey from NASA's Back

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. BROOKS. Mr. Speaker, a few days ago the world was forcefully reminded of the crucial competition for national superiority in the field of space and astronautics—and I say "crucial"

because it is now conceded that space exploration is becoming a prime influence in the idealogical struggle between the free world and the Iron Curtain countries.

The reminder came in the form of Russia's Sputnik V, reportedly a 5-ton satellite containing almost a menagerie, which circled the earth for 24 hours and then was successfully brought back to land at a selected point in the Soviet Union. While the time involved was too short for Western scientists to check the truth of the Soviet claims, there appears to be no reason at present to doubt them.

Assuming they are correct, therefore, it is obvious that the Soviets are not far away from successfully placing man into space. Many experts, in fact, are predicting that this will take place within a month or two. If so, both the scientific and political ramifications of the feat will be very great indeed.

The reason for my brief review of the situation is to emphasize two things:

One is that, no matter how we rationalize it, we cannot get away from the fact that America's national space effort is vital to our security and our prestige and that we cannot afford to be second in this effort to the Soviets or anybody else.

The other point is that, in spite of the recognized importance of our space program, we are still indulging in an incredible sort of public myopia by forcing the National Aeronautics and Space Administration to operate under provisions of patent law which hamper its efforts to improve space technology.

Mr. Speaker, I do not at this time care to get into the argument of how the United States stands vis-a-vis the Soviets in the so-called space race. As I have pointed out, the Soviets are very formidable. Nonetheless, in a relatively short time United States achievements have been remarkable and it would be idiotic to downgrade the worth of such recent ventures as Tiros, Transit, Pioneer V, Discoverer, and Echo. I note that Britain's eminent astronomer and space authority, Prof. A. C. B. Lovell, has said in just the past few days that the Russians "undoubtedly have a lead of several years over the Americans in their ability to put extremely heavy objects into orbit and also in the precision of their guidance. But, on the other hand, the Americans, from the extremely wide scope of their scientific experiments and their ability to extract fundamental results, have a considerable lead over the Russians."

This is not to suggest that our space program is all it should or could be. I have been critical of that program in some aspects in the past. I expect to be so again in the future. That is part of the function of the committee which I have to honor to chair. But I hope our criticisms will always be constructive ones leading to the fulfillment of our basic objective—which is to help make the American space effort as sound, effective, rapid, and economical as possible.

And it is in connection with this basic objective, Mr. Speaker, that I again emphasize the need to change NASA's organic act in order to free the Space Agency from its unduly burdensome patent provisions.

I am at a loss to understand the logic of continuing to require NASA to function in a condition of partial paralysis.

The National Aeronautics and Space Act of 1958 forces NASA to take the entire right, title, and interest to patentable inventions made by contractors in the course of their work with the Space Agency. Worse, it does not allow anyone to receive a patent on any invention which may have significant utility for aeronautics or space unless the inventor can prove that his brainchild was developed without the aid of Government money.

Is it any wonder that NASA has difficulty in getting the best research available and getting it economically?

In most cases, all the Government really wants, needs or can use is a permanent royalty-free license to inventions made under space research contracts. And this right the Government always obtains under NASA contracts. So why do we demand that the space agency clutter and foul its vitally important contract processes with patent provisions which are anathema to private enterprise and generally useless to the Government and the public? Why NASA—when other Government agencies (with the exception of the Atomic Energy Commission) are free to contract for research and development as they please?

Mr. Speaker, the committee on Science and Astronautics, through its patents subcommittee headed by Representative ERWIN MITCHELL, of Georgia, and in full committee, investigated this complex patent problem for nearly a year. We found that the provisions tended to retard the conduct of the national space effort. And we agreed with the contention of NASA that the law could be amended in a manner to permit far greater contract flexibility and at the same time continue to safeguard the public interest from any flagrant misuse of government rights and funds.

We very carefully drafted a new provision which eventually drew the approval of Government experts, of industry, of the patent law profession and of small business.

That provision was contained in a bill—H.R. 12049—amending several parts of the Space Act. It was debated in the House for 2 days last June. At that time any arguments of potential dangers to the public interest, alleged by some to be inherent in the new provisions, were conclusively shown to be without foundation. The House passed the bill by the overwhelming vote of 235 to 31.

Now I freely acknowledge that Federal patent policy as a whole may need review and perhaps revision. But this will be a time-consuming matter for the proper authorities to investigate and weigh. Meanwhile, I cannot subscribe to the view that the U.S. space program should be made to suffer during this long interim, particularly when the recommended changes have the approval of our most knowledgeable Government patent officials and when authorities such as the Comptroller General of the United States express doubts that it will ever be possible for all Federal agencies to follow precisely the same contractual patent policies.

In my opinion it is folly to procrastinate where our space effort is concerned.

I do not know what plans the other body may have for considering the changes in the Space Act which the House has approved. But it is my earnest hope that those changes will become law in the near future.

Studies of South Africa

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, August 29, 1960

Mr. KEATING. Mr. President, the center of world attention is today deep in the middle of Africa. The difficulties that the Congo is facing have dramatized more effectively than anything else could have the problems that the whole continent of Africa is going to have to face in the next few years.

Nowhere are these events being followed with more attention than in the Union of South Africa, virtually next door to the strife-ridden Congo. The South African policy of apartheid, under which 2 million whites are the absolute masters of 10 million blacks, has gradually cut South Africa off from the rest of the free world. Now, on the eve of a referendum as to whether the country should remain technically under the rule of the British monarchy or become a republic, there is increasing evidence that South Africa may not be permitted to rejoin the British Commonwealth should she choose to become a racialist republic.

No one could deplore more than I the policy of apartheid in South Africa with its bitter legacy of racial hatred. South Africa stands today on the threshold of a complete withdrawal from the 20th century policies of increasing freedom and responsibilities for all races.

In view of the importance that South African policies have to the rest of Africa, and therefore to the rest of the world, I ask unanimous consent to include the following articles in the Appendix of the RECORD. Dr. Cornelis W. de Kiewiet is the president of the University of Rochester and a well-known authority on the Continent of Africa, where he was brought up. He has recently been attending a national education conference in Durban, South Africa. Dr. de Kiewiet's remarks are thoughtful and penetrating. I hope many of my colleagues will have an opportunity to read them, as well as others in this series which I hope to include later. I ask unanimous consent that the articles entitled "Race Policy Reaction Makes Whites Feel Friendless," Country Sits on a Volcano," and "U.S. Wisdom Is Helpful; U.S. Folly Is Harmful," all written

by Dr. de Kiewiet, and an editorial entitled "Dr. de Kiewiet Gives Us the South African Reality," all published in the Rochester (N.Y.) Times-Union, be printed in the Appendix of the RECORD.

There being no objection, the articles and editorial were ordered to be printed in the RECORD, as follows:

RACE POLICY REACTION MAKES WHITES FEEL FRIENDLESS

(By Dr. Cornelis W. de Kiewiet)

JOHANNESBURG.—We flew over Africa at a height of 35,000 feet. Far to our left Mount Kilimanjaro rose from the brown plain. Our great height made it look unimpressive, although it is over 19,000 feet high.

Very far to the right was a hazy mass, barely visible, of great mountains. Behind those mountains the Congolese were at that moment busy changing the history of Africa, and maybe of the world.

We circled over the splendid hilly suburbs of Johannesburg. Beyond them lay the drab sea of native housing settlements, 30 square miles of servants' quarters.

That night we sat in a beautiful home looking at the bold stars of an African night. For every star there was an unblinking light on the ground below. It was an impression of wealth, strength, and security. But what we talked about was race conflict in the Congo, everywhere in Africa, in the brilliant city right at our feet.

My host was a wealthy industrialist. He was an intelligent and levelheaded man.

"Why are the Americans so down on South Africa?" he asked me. "You have race problems which you cannot solve, yet your State Department rebuked us before the whole world after the shooting of Africans by the police at Sharpeville."

The man in the street is angry and resentful at Secretary Herter. He blames American journalists for bias and prejudice. He accuses them of not understanding his problems. Now, of course, he points to the Congo and says, "This is what you Americans do not understand. These people cannot govern themselves. If you give in to them, you give in to barbarism."

A minister of the Dutch Reformed Church with the coldest blue eyes said, "All of our troubles come from across our borders. Americans are setting the fires in Africa, and we must put them out."

The president of a national association of manufacturers asked, as if the answer were obvious, whether America were extending her imperialism to Africa.

My answer that America was genuinely interested in political and economic stability for the sake of peace, left a puzzled look in his eyes.

I had a 2-hour conversation with the top leadership of the United Party. They were most superior people, but their numerous questions about America's role in Africa showed their anxiety about America's disposition to the white populations of Africa.

This is a lonely land. Not fear, or anxiety but loneliness is the predominant feeling. They feel lashed and expelled and friendless. To those who dislike South Africa's racialism this is a torment.

But to those who approve, worldwide criticism brings a strange comfort. It is the comfort of a small band of resolute men face to face with danger, knowing that they must depend on their own courage.

More gently than Mr. Herter, the British Prime Minister rebuked them too, when he talked to the South Africa Parliament about the "wind of change" in today's world.

A very astute observer told me that between them, Mr. Herter and Mr. Macmillan may be responsible for turning the tide of public opinion in favor of becoming a republic. There will be a referendum on this issue next fall.

The average South African is frightened. The Congo is in his background. Black African nationalism hates South Africa's policies of radical racial segregation. He is also angry because his American and Britsh allies of World War II are not standing by his side.

So he is beginning to listen to the grim stubborn men who rule South Africa, and who have made his lovely and livable land into a country of the tensest and most explosive race relations in the world. But they are also uneasy. Some admit that they are wrong. Some are leaving the country. There is a crisis of conscience in the land.

COUNTRY SITS ON A VOLCANO

(By Dr. Cornelis W. de Kiewiet)

JOHANNESBURG.—South Africans are angry at American criticism of their racial policies, yet the respect and admiration for America are very great. Two years ago the waiting list of South Africans who wished to migrate to the United States was quite short. Today a South African must wait 8 years before his name comes up, so many want to leave this country.

I have talked to whites and blacks and Indians, to Englishmen and Afrikaners, angry men and frightened men. How bad are things? The answer depends on the man with whom you are talking.

How dangerous are things? Everybody agrees that the country is sitting on a volcano. When the police fired on a mob of native demonstrators at Sharpeville, killing a large number, the country was probably on the brink of a disaster. The unrest broke out at widely scattered points.

A leading authority on race relations, who disagreed totally with the Government's policies, told me that the demonstrations at three or four points could have turned into a wildfire of insurgency and rapine.

Those who blame the Government for the harsh policies that provoked the unrest, do not blame it for its firm handling of the crisis itself. Before the crisis Hendrik Verwoerd, the Prime Minister, had so many critics that his leadership was shaky. Today, and especially after the attack on his life, he is firmly in the saddle.

Just what is wrong? Instead of generalizing about the crazy economics, the harsh laws and the selfish politics, one can find and see the answers in simple people and simple situations.

A stunted little stoneworker from Basutoland is fined nearly a month's wages for not having his papers in order.

"This country too much trouble, boss," he said. "Ooh! This country hard, ooh! I go back Basutoland, no trouble there!"

A gang of 15 Africans are working on a construction job wheeling brick and cement. One of them gives a sudden call. In a flash everyone has disappeared. They have dived behind rocks and under bushes. Round the corner comes a police pickup van.

It is the government game of cops and robbers in the world: In a hospital lies a man paralyzed from the waist down. He is the victim of the gang fighters who have learned to sever the nerves that control the lower body.

The little Basuto stoneworker keeps a couple of dogs in his shack for protection against the thieves that roam the night.

In the infant ward of a hospital there are two and three children to a single cot. Sick women lie on the floor between beds and in the corridors. I ask the doctor what is the most common disease. The answer is malnutrition. It is so bad that growth is stunted and mental development permanently impaired. The head of a federation of industrialists admits that low wages keep a large proportion of the native population below the breadline.

One evening my host nodded in the direction of a babble of sound. It came from the terrible African slums called Alexandra. "Eight men were murdered there last night," he said.

If you want a German camera, a Swiss watch, a set of tires or a nylon shirt, you can get it from one of the Alexandra fences, or he will arrange to steal it for you. On paydays, knife-carrying thugs roam the trains carrying African workers to the townships outside of Johannesburg. An employer of 30 Africans told me that in a 12-month period everyone of his workers had been held up at knife point and robbed.

"It is the war of the African against the African," an African clergyman explained to me. Because the police are so severe and the laws so stringent, crime has become an assertion of freedom. It is an ugly assault upon control, restraint and law abidingness. The enemy of the criminal is any African who cooperates with the prevailing order.

Bitterly an African leader exclaimed, "We ask quietly to be heard on our legal rights and are called agitators, and clapped in gaol. And so our followers are intimidated by the men of violence and crime. What do they think the future will be?"

It is worried South Africans who take me to see these things or tell me about them. They are ashamed and want to do something. This is the good side. The uprising at Sharpeville has paid off. The white man has suddenly seen the black man as a fellow human being and a fellow worker who has learned to want dignity and a share in the good things of life. Thus there is hope yet.

Critics of the government are saying that the worldwide protest against the shooting and clubbing of Africans has virtually disarmed the government. A policy of repression and control based on Sten guns, tanks, and mobile police has been bankrupted. Now they stand emptyhanded before the nonwhites.

U.S. WISDOM IS HELPFUL; U.S. FOLLY IS HARMFUL

(By Dr. Cornelis W. de Kiewiet)

DURBAN, SOUTH AFRICA.—The conference in Durban which we are attending is a national event. More than a thousand of the country's leading educators and civic leaders attend the lecture and discussion groups.

A reference to the U.S. Supreme Court decision on school segregation is a daily event. This is the other side of the coin.

What the United States does is of capital importance in their eyes. They may be angry or pleased but it always matters. The picture which we give of ourselves is the most important force in our foreign policy.

In the worldwide competition for the mind of peoples it is impossible to exaggerate the beneficial effects of American wisdom and generosity, or the harmful effects of American foolishness and selfishness.

These people are not impressed by military power. Because they are on the painful receiving end of history they are hungry for wise leadership. A Johannesburg businessman even said to me, "You must give us the answers. There is nothing we can do."

The events in the Congo have put all Africa and 200 million people on the knife edge of destiny. The Soviet Union has jumped in with both feet.

We are beginning to see the shape of post-U-2 Russian diplomacy. The offers by Khrushchev to the Congo have brought Africa into the center of the world struggle. His offer of military aid was probably a bluff. It is not anything to worry about. But he put the United States into a cleft stick. Our predicament is far worse than it is in Cuba. For Africa there is no Monroe Doctrine.

The colonial powers are pulling out, and their decisions cannot be reversed.

In a real crisis in the Caribbean the United States has local friends in Canada and some of the states of the Organization of American States. If the need is desperate unilateral action is possible.

In a strict sense America has no more or no better rights in Africa than the Soviet Union. That is why it is now vitally necessary to work with and depend upon the United Nations. There is no sound or safe alternative.

A crisis in the heart of Africa has given Russia her greatest opportunity since Korea. Perhaps not in a strictly military sense but in almost every other sense, she can circumvent our policy of containment and get in behind our bases. Nobody can now question the urgent need for the most painstaking review of the bases of American foreign policy.

In Washington there are some rueful faces. During the present session of Congress, the State Department and the International Cooperation Administration had been pleading for funds to help plug the holes left by the departing colonial powers.

OTTO E. PASSMAN, Democratic Representative from Louisiana, has heaped scorn and insult on Government spokesmen. Mr. PASSMAN cannot be blamed for the events in the Belgian Congo. But had the United States had a far more vigorous and well-established aid program for the newly emerging Africa States there would be less question about our influence now.

The South African newspapers are giving the news from the Congo an exhaustive coverage. The fire is in their backyard, and they are deeply worried.

The Afrikaner nationalist press is bitter about the Belgian folly in ever giving self rule to the Congolese. Even though Belgian refugees are being invited to settle in South Africa there is a touch of contempt toward them because they did not fight back.

* * * * *

There is a rumor that the Portuguese, the South Africans, and the Rhodesians may take some formal steps to close their ranks against African nationalism and Russian intrigues. The supporters of apartheid feel that the Congo has proved the wisdom of their position. They are going to be much more stubborn.

For the United States the closing of the ranks of the white man in Africa raises a difficult problem. So far it has been encouraging political concessions to the black African as a means of relieving the tensions between black and white. From now on the white communities will be skeptical about this argument. Therefore, American policy is open to the risk of offending either white or black public opinion.

Some of the English-language newspapers have attacked the Belgians for different reasons. Compared with the British and the French colonial rulers, they have failed to train the Congolese for responsibility.

The uprisings of a race of servants and ignorant men are always cruel. There are not as many as a dozen university graduates amongst the Congolese, not a single fully qualified doctor, not a single competent army officer.

The Belgians are not being punished because they acted too soon, but because they did too little too late in preparing their subjects for the inevitable outcome of the dramatic new age in Africa.

The argument is telling, and provides the only possible answer for America. An increased program of American aid to build up the competence of the new African States in education, administration, economic and technological leadership is a priority we can neglect only at great peril.

A headline in an Afrikaner newspaper tonight gives part of the reason, "Look Out. The Russians Are Going To Take the Congo." If they do, I predict that Northern Rhodesia will march into the rich Katanga Province and that South Africa will back them. World war III could now break out in Africa.

DR. DE KIEWIET GIVES US THE SOUTH AFRICAN REALITY

For once, the headlines coming out of the African continent do not involve the Union of South Africa. It is the Belgian authorities, and not on this occasion the exponents of the policy of apartheid, who have been standing at the bar of world opinion.

But the Congo is very much in the minds of the South African people. For it is the fear of being overwhelmed by the blacks that lies at the root of their behavior. And some vivid testimony to this fear is being given us by one of our own citizens, Dr. de Kiewiet, president of the University of Rochester, now lecturing and traveling in his homeland.

* * * * * *

Like a stubborn man who reacts to criticism by becoming stubborner still, the South African has been pricked by a hostile world into a determination to stick to his course. "The South African is angry because his American and British allies of World War II are not standing by his side," Dr. de Kiewiet wrote in his first report. "So he is beginning to listen to the grim stubborn men who rule South Africa."

One result of the ostracism to which Spain was subjected in the 1940's was that the people closed their ranks behind Franco. And something of this sort has happened in South Africa. Many of the white population are resentful because other nations take them to task without understanding the harsh realities they face.

There is something in what they claim. Safely removed as we are, it is very hard for us to appreciate how important an influence is the sheer pressure of Bantu numbers on the white South African minority.

There was a time in our own country when the southern American felt a little the same way. It was said that slavery was not always a cruel institution, and it's true that the bonds between slave and master were sometimes warm and affectionate. Nevertheless, it was a system calculated to preserve white superiority.

Just as the South African today is goaded by outside criticism, so the southern whites often claimed that the North was precipitating trouble by forcing changes that ought to be gradual. And we know from our own experience in the North in more recent times that it is easier to call for action on a problem that exists elsewhere.

Nevertheless, the principle of equality for others is not one to be compromised with. This was why the Civil War was fought. And this is why the outside world deals so roughly with South Africa.

The fact that we still have race difficulties of our own does not disqualify us from being impatient with South Africa. For the point outsiders do not always appreciate about the American Negro problem is that outbreaks of trouble occur within the context of a situation that has been slowly improving for a hundred years.

The same cannot be said of South Africa. In these days of rapidly emerging nationalism, a policy of apartheid is a step back into darkness. But we can at the same time try to understand the forces that are abroad in the Union. And this is where Dr. de Kiewiet can help us.

A Report to the People

EXTENSION OF REMARKS
OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 29, 1960

Mr. DONOHUE. Mr. Speaker, as has been my custom, throughout my public life, I desire to include at this time a summary account of my activities and speeches during this 86th Congress.

NEW REGULATIONS

In accord with your direction on speech limitation, and the current regulations of the Joint Committee on Printing on "retrenchment in extensions," I shall necessarily be restricted in my objective. I will observe the rules of the House, which I always have, while doing my best to comply with the duty I have.

A MORAL OBLIGATION

In my conscientious conviction, the Biblical mandate "to render an account of the stewardship" imposes upon every responsible public officeholder a moral obligation. It is an obligation that I have always and consistently attempted to fulfill.

Realizing the thousands of bills that were introduced in this Congress, and the several hundred public laws enacted, it is obviously impossible to completely cover the whole record, especially in view of the new space and time regulations, however, I shall, herein, try to present and reveal my personal pronouncements and actions upon some of the more important and more widely publicized legislative issues of this 86th Congress.

AN EXPLANATORY WORD

Mr. Speaker, in the past "stewardship accounts" I have given here, it was my custom to accompany the inclusion of my remarks upon particular measures and issues with an outline of what I felt to be the background and significance of each bill. Today I am confronted with a restriction on that custom and the task I am attempting here is a little more difficult on that account; however, I shall probably have opportunities to enlarge upon my report here after the adjournment of the Congress.

Meanwhile, I think I can best carry out my duty, under the circumstances, through revealing my stand on some of the prominent legislative issues by reviewing the speeches and remarks I made on the particular occasions. The listing will be made not so much in any chronological order, since the report summarizes a 2-year period, but more in an effort to present problems in accord with the importance the general public appears to attach to them. Any necessary accompanying remarks will be kept as brief as possible. Of course, the great majority of our people are aware that most of our important legislative actions these days are for the continuation and amendment of laws that are

already in effect and which are expanded or modified, by our determinations here, through the succeeding years.

Military Security and Communist Containment

Guaranteed defense appropriations, yes; extravagance and waste, no

(Thursday, June 9, 1960)

Mr. Donohue. Mr. Speaker, in the wake of the unhappy collapse of the Paris summit meeting, and the apparent cancellation of the U–2 intelligence information flights, there is much talk about the necessity for increasing the proposed military budget of $39.3 billion.

Indeed, there is no question about the imperative necessity, in the light of the beligerent attitude of the Kremlin, of our military forces being fully prepared to protect the security of the United States against any surprise move by the Soviets. It would seem logical in the consideration of our recent experiences with Russia that the proposal to maintain an airborne alert at all times to be reexamined, and that our research and development activities in the space field be accelerated.

If these, and other proposed military security provisions, require additional appropriations, over and above what the House has appropriated, then, of course, such additions must be seriously entertained. It is evident from the recent actions of the Senate Defense Appropriations Subcommittee, that the Members of that body feel that the Nation's military power should be boosted.

When the House returns to the consideration of this grave subject, in the near future, I most earnestly hope we will not be of a spirit to disregard the necessity for including every reasonable safeguard against and restriction upon wasteful and extravagant military spending that we can. Thirty-nine and a third billion dollars is an awful lot of money and its very enormity provides an avenue for careless and negligent expenditures.

As you all realize, this House levied a 3-percent cut in the $13 billion military procurement fund in the bill in an attempt to force the Defense Department to adopt more economical and frugal procurement practices.

On this score the Comptroller General, in his recent report, pointed out the existence of waste and inefficiency, by the Defense Department, in its management of electronic supplies of the military services.

He revealed that a recent review disclosed that electronic equipment valued at $2.5 million was being unnecessarily repaired at a cost of $680,000 when usable items were available in large quantities in the other services.

He indicated that unnecessary administrative costs were being incurred because there are six independent organizations performing the same or similar stock management functions.

In past reports multitudinous examples of extravagance and waste by the Defense Department have been disclosed through the use of negotiated contracts instead of competitive bidding and confused and antiquated bookkeeping methods.

Mr. Speaker, it is the duty of the Congress, and of the administration itself, to insure that the purse strings operated by the various departments of the Defense Department are kept sensibly and economically tight. Closer supervision of negotiated contracts to prevent exorbitant profits and a wider use of competitive bidding practices would do much to save the taxpayers' money.

A more strict adherence to the provisions of the Budget and Accounting Procedures Act of 1950, and a better organized central procurement unit would go far toward preventing duplication and waste.

Adequate national defense is indeed vital but the people of this country are seriously disturbed by the continuing revelations of wasteful and extravagant spending by the military without regard to the fact that each and every penny spent comes out of the hard earned, and highly taxed, pay of the overage American workingman and business. The duty of the Defense Department to guarantee our security does not carry with it any license to indulge in loose and careless financial practices.

With past experience in mind, and with due respect to whatever action the Senate may take, I hope that this House will continue to impress upon the Defense Department that economic frugality and wise spending can be a mark of efficiency in the military field as well as it is of an enterprising business.

If and when an emergency hour should come immediate authorization can always and readily be given to place the military on an actual war spending scale.

Mutual Security

(Tuesday, July 28, 1959)

Mr. Donohue. Mr. Chairman, as I see it, this debate on the reduced and reasonable continuation of our mutual security aid program should begin with a concrete demonstration of our deepest concern for our overburdened American taxpayers.

That legislative concern should be even more concentrated and emphasized because of the factual evidence in the record, by the Draper Committee, the Comptroller General, himself, and our congressional committees, "of waste and extravagance—a pattern of loose, lax administration through the entire complex of foreign aid—and refusal of the ICA to provide information."

I earnestly hope that in the phases of the program where this extravagance and waste has been displayed the recommended reductions will be approved.

The divisions of this program which appear to have been operated and projected in the best interests of ourselves and the advancement of our foreign allies are the technical assistance and Development Loan Fund extensions. I hope that these features will be adequately supported as their worth has been substantially proven.

Let us strive today to conscientiously enact a measure that will provide reasonable assistance to our allies, in the fields where such help is most needed, while we insure elimination of those parts of the program which have been proved wasteful and worthless.

(Friday, August 26, 1960)

Mr. Donohue. Mr. Speaker, over the past few years, when we have been debating this mutual security appropriations bill, I have emphasized my belief that the parts of the program, which have proved of substantial worth by experience, such as technical assistance to underdeveloped countries and Development Loan Fund operations, should be adequately supported, and the most careful examination, in the interests of the American taxpayers, should be concentrated upon those phases of the program in which impressive evidence has been demonstrated in revelation of great waste and extravagence.

I very greatly fear that, particularly these days, we too often overlook the fact that without the existence of a high morale among our own citizens neither this program, nor any other, will ever accomplish their full objectives. The only legislative way in which we can encourage the morale of our own people is by proving to them that we intend to fulfill our responsibility of protecting this foreign investment for them, and by showing them that we are not neglecting their domestic needs because of loose and extravagant spending abroad.

The Communist Captive Nations Must Never Be Abandoned

(Monday, May 2, 1960)

Mr. Donohue. Mr. Speaker, as a cosponsor of this resolution, designed to influence the restoration of the fundamental freedoms and God-given rights of the subjugated peoples now existing in Communist captive nations, I most earnestly hope this House will promptly and unanimously approve it.

As we all know, in numerous and repetitive documents and agreements, the great powers of the world, including Soviet Russia, have pledged and promised the persecuted peoples of these nations, the return of their national freedom and personal liberties. The United States has consistently attempted to have these promises carried out but Russia still denies these countries the right of free elections and independent sovereignty.

To my mind the adoption of this resolution will add substantial strength to the position of the President when he meets with the Soviet leaders at the approaching summit conference. The Communist rulers, by our action, will be emphatically reminded that it is the sense of this Congress that no firm and lasting agreements for peace can be made while the world remains practically half free and half slave. By our action the rest of the free world can be concretely convinced this Nation will not abandon her traditional principles of free government for all peoples and the captive nations themselves will be further inspired to remain adamant in their determination to reject any Communist entreaties for cooperative existence under the Soviet system.

The fact and the truth is that the Russian Kremlin is solely responsible for the inhuman slavery being imposed upon the brave peoples of Poland, Czechoslovakia, Lithuania, Estonia, Latvia, Bulgaria, Hungary, Rumania, and all the other captive countries. It is also unfortunately true that we have suffered many disastrous propaganda defeats at the hands of the Russians.

Not the least of the purposes of this resolution is an attempt to meet the Russians in their own most effective field. Unlike their multitudinous and skillful distortions for propaganda purposes, we are telling the truth. If the Kremlin leaders want to prove their sincerity in seeking peace in the world then let them simply declare freedom for the captive nations. That is the first and fundamental step that must be taken before there can be any reasonable hope for the achievement of a peaceful world.

Let us then promptly approve this resolution to encourage the Soviet rulers to take this first, just action and then proceed, at the summit, to the adoption of agreements for all of us to live, in good will and good faith, in a world at peace.

Domestic Progress and American Morale

Mr. Speaker, it has been my growing fear over the last several years, and I have repeatedly expressed it here, that in our concentration upon foreign affairs and Communist containment measures, we are tempted to entirely neglect or unwisely retrench domestic programs primarily designed to keep American progress on the march and retain the morale of the American people at a high level.

Many times I have here emphasized my deep conviction that it would be ironical, indeed, to overexert ourselves in retaining the friendship of foreign allies, while at the same time we encourage the decline of morale among our own people by neglecting their essential needs.

I have felt it my duty to continuously point out to this body that at a time when we are telling the world of our better way of life, as opposed to Communist regimentation, it could be dangerously impractical to eliminate or cripple any of those public services and programs whose contribution to the progress of the country have been nationally recognized and which sustain the vitally important high morale of our people to determinedly endure the sacrifices required to win the cold war.

This is the basic thought contained in my remarks upon such recognized legislative programs of domestic progress as social security expansion, medical aid for the elderly, appropriations for health, education, and welfare, aid to economically distressed areas, adequate American housing, fair labor standards amendments, and a host of other measures fundamentally intended for the good of all Americans.

Extracts from my speeches in the House on these various subjects follow:

SOCIAL SECURITY AMENDMENTS

(Wednesday, June 22, 1960)

Mr. DONOHUE. Mr. Chairman, unfortunately it is quite evident there is much fear and distressing doubt in the minds of a goodly number of Members here that this proposal, H.R. 12580, the Social Security Amendments of 1960, is as reasonable and realistically responsive as it could and should be, to the needs and the desires of the great majority of American citizens. Under such circumstances we are, unhappily, because of the closed rule under which we are operating, permitted to vote only for or against the whole bill, without modifications.

Being restricted, then, to these two choices, I intend to supjort the bill because it does provide an extension and expansion of a limited number of benefits to those people whose needs are most urgent.

For instance, the bill removes the age 50 eligibility requirement for disability benefits; it liberalizes the eligibility requirements of old age, survivors, and disability benefits; it makes certain improvements in the social security benefit protection for children and extends benefit eligibility to more widows; it effectuates certain improvements in the administrative financing and solvency provisions of the unemployment compensation system, as well as extending its coverage; it extends coverage to groups that were not before included. All these improvements are good and they have already been carefully and thoroughly explained by the distinguished chairman of the House Ways and Means Committee.

Unfortunately, the committee has not seen fit to recommend other advances and improvements which a great many of us have been advocating with the earnest hope that they would be included in this measure. Chief among these would be provisions to reduce the retirement age, especially for women, and particularly for widows; to increase the minimum benefits in accord with rising living costs; and realistically raise the outmoded and outdated basic income limitations.

TITLE XVI

Of course, the major fears and doubts about the substantial worth of this measure are concentrated on the most controversial new title XVI, which would initiate a new Federal-State grants-in-aid program to help the States assist low-income aged individuals who need help to meet their medical expenses. In my own opinion this title, and its provision, and its provisions, fall far short of adequately and equitably assisting our older citizens in the desperate financial distress they tragically encounter from the ills and the sicknesses so common in the later stages of life.

It is my earnest hope, that after this measure is considered, and probably changed, in the Senate, we may yet have the opportunity to repair and strengthen this title so that a far more equitable and effective program of medical service and hospitalization treatment assistance may be granted to the millions of aged Americans so desperately and despairingly in need of it.

MEDICAL AID FOR THE AGED

(Thursday, June 9, 1960)

Mr. DONOHUE. Mr. Speaker, despite our vaunted boast of high living standards and Christian concern for the well-being of all our people it remains a fact that the United States is the only major industrial country in the world without some form of national medical insurance for its elderly and retired citizens.

From the overwhelming evidence in the record, contained in economic statistics and the testimony of experts, it is painfully obvious that our aged people are in imperative need of some type of Federal medical aid.

According to Dr. Porterfield, Deputy Surgeon General of the U.S. Public Health Service, out of the 10 million persons in the Nation who have heart disease, 4 million are 65 or older. At any given time, some 750,000 persons have cancer and most of these are persons over 65. Almost 3 million individuals have diabetes and the aged account for the majority. This is also true of the 5 million suffering from arthritis and the 6 million who are affected by related rheumatic disorders. Each of these diseases brings with it the high costs of medical and hospitalization treatment as well as the need for expensive drugs. In considering these dramatic and disturbing figures let us not forget that medical costs have increased 46 percent in the last 10 years.

The economic distress caused by these advanced medical costs is even more impressive when we realize that 74 percent of the aged have income of nothing to $1,000; 11 percent have incomes from $1,000 to $2,000; and only 15 percent have incomes of $2,000 and more. These statistics make us consciously appreciate that illness among the elderly is truly a staggering and discouraging financial burden.

There is no commonsense in any attempt to deny or gloss over this obvious national problem, and the urgent necessity of promptly dealing with it. The administration itself has openly admitted its existence. There remains only the legislative task and duty of designing a measure acceptable to the Congress and the President, which will extend the fullest and most equitable Federal insurance possible to the desperate aged in their gallant fight against the economic distress and discouragement of costly sickness in their declining years.

Mr. Speaker, I earnestly hope this session of the Congress will not conclude until those of us, in the Congress and the administration who have the responsibility, have fully discharged our duty and obligation to the elderly citizens of this blessed and bountiful country.

DEPARTMENTS OF LABOR AND HEALTH, EDUCATION, AND WELFARE, AND RELATED AGENCIES APPROPRIATION BILL

(Tuesday, March 29, 1960)

Mr. DONOHUE. Mr. Chairman, it was the unanimous judgment of our Original Thirteen States, as expressed in their Independence Declaration, that all men are endowed by their Creator with certain unalienable rights, among which are life, liberty, and the pursuit of happiness.

In my opinion there is no measure coming before this body, more fully designed to promote the enjoyment of these rights to American citizens than the appropriations bill, now under consideration, for the Departments of Labor and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1961. The basic units and activities of these executive departments are more closely connected with the lives of our citizens than any other agency of our Government "for the people."

That is why I would feel remiss in my duty if I did not urge you all to approve and accept the appropriation here unanimously reported and recommended to us by the distinguished Subcommittee on Appropriations directed by our esteemed colleague, the Honorable JOHN E. FOGARTY, of Rhode Island. The recommendations of the subcommittee are unanimous and represent the best compromise decision of reasonable and capable men.

Mr. Chairman, to attempt to either regulate or improve the health and happiness of human beings in terms of dollars and cents is a most difficult, if not impossible task. We are all, I am certain, agreed on the necessity for practicing economy in Government expenditures and to preserve our financial stability and world position. However, I think we are further agreed that gestures of doubtful economy at the expense of lowering national standards of working conditions, health protection, and educational advancement is most unwise and impractical, more especially in these days of communistic competition.

For that fundamental reason, I most earnestly hope that no crippling reductions will be attempted during our action on this bill; indeed, it is my deepest hope that the moderate increases recommended by the subcommittee and the chairman, principally in the fields of hospital construction, vocational education, assistance to the schools in federally impacted areas, grants to States to build waste-treatment plants, and research at the National Institutes of Health will be unanimously accepted.

I would like to emphasize that the subcommittee has not advocated general increased in all the areas covered by this bill. The subcommittee adopted the very sensible approach that there are certain selective and essential areas of public need that can and must be met in the national interest. It would be most difficult to justify any wide disagreement on these specific activities the subcommittee has chosen for their special attention.

The fundamental objective of the subcommittee, so obviously and patriotically revealed in their report, was to keep all of the many and varied activities of these two major public service departments of Government in operation at their highest economically efficient level while encouraging a selected few activities to moderately advance their scope of service in response to particular and proven expanding public needs.

Mr. Chairman, the appropriations we grant under this measure are designed to continuously improve the Christian, civilized working conditions of our people and to protect and advance the health of all our citizens, particularly children, women, and the aged. It is obvious, therefore, that this appropriations bill is of the greatest importance to the progress of our national welfare and that is why each of us have the highest obligation to devote the most conscientious attention to it.

At a time when we are generously granting billions of dollars to aid our foreign allies, let us not be neglectful of our own citizens. At a time when we are telling the world of our better way of life, as opposed to Communist barbarism, let us not dangerously reduce any of these public services whose contributions to national progress have been universally acknowledged. At a time when we are engaged in a life-and-death struggle with the curse of communism, let us take no unwise chances of disrupting the high morale of our own good people. In conscience, let us vote in support of the con-

tinuing and full functioning of these units and agencies whose services are, indeed, in the national interest and emphatically good for all Americans.

FEDERAL AID TO DISTRESSED AREAS IS URGED

(Thursday, June 9, 1960)

Mr. DONOHUE. Mr. Speaker, as you are well aware, the whole matter of depressed areas was thoroughly explored and debated during our recent House approval of the aid-to-depressed-areas bill, and I am not going to, at this hour, unnecessarily belabor the subject.

The Department of Labor officially testified to the existence of multitudinous pockets of economic distress and decline throughout the country, and we have our unhappy share of them in the New England region and within my own home State of Massachusetts. It has been demonstrated that the economic distress in these areas cannot be alleviated by the resources of area industries and municipal authority alone.

Unfortunately, the President saw fit to veto the bill to extend these areas Federal aid and the Congress did not override the veto. However, the President did express his hope "that suitable legislation would be enacted at this session of the Congress."

Mr. Speaker, on that hope, and in that spirit, I most earnestly urge that the leadership, together with administration representatives, will work out compromise legislation that can be presented and acted upon by the Congress before adjournment.

ADEQUATE HOUSING FOR THE AMERICAN PEOPLE

(Thursday, August 27, 1959)

Mr. DONOHUE. Mr. Chairman, this is, we might say, the "second time around" on housing legislation, so there is no need to inflict any repetitive recital of statistical information upon you.

In my own opinion the evidence and information provided to us in proof of housing deficiencies in this great country and the essentiality of an adequate continuing program has been overwhelming. The distinguished chairman of the committee, and his diligent associates, have worked tirelessly to bring a sound measure before us, and both he and they deserve our deepest thanks and congratulations. They have made a substantial effort, in good faith, and in accord with high principles, to present a revised bill to reasonably meet Presidential objections.

As you are all aware, the measure still contains, and I earnestly hope they will be retained, provisions for loans and grants for slum elimination, college dormitories and classrooms, housing for the elderly, nursing homes, and an additional $8 billion of authority for FHA to continue its mortgage loan insurance program. If these features, yet more limited than many of us think wise, are not in the best national interest, then I confess I do not know what is.

As you all further realize, this new measure represents a reduction in Federal housing grants of 27 percent below the amount in the previously vetoed bill and a cut of 17 percent in loans.

Mr. Chairman, I want to remind my colleagues that we have been urged in the past and we will be called upon again in the future, ironically by many of the same people who desire to cripple this housing bill, to approve the granting and the loaning of billions of the American taxpayer's money for the rehabilitation of foreign nations and assistance to underdeveloped countries. If we can afford to continue and expand that gigantic program, then certainly we can afford to carry on a moderate housing program to alleviate the desperate needs of our own citizens for decent housing, slum clearance, and college facilities.

I hope you will all give your most conscientious consideration to the compromise merits of this bill and pass it without stifling amendments.

FAIR LABOR STANDARDS ACT

(Thursday, June 30, 1960)

Mr. DONOHUE. Mr. Chairman, I rise to urge unanimous approval of this bill to amend the Fair Labor Standards Act by increasing the minimum wage and otherwise providing progressive changes in the present act.

Primarily I urge approval of this bill because it is clearly another advance toward fulfillment of the declared policy of the original Fair Labor Standards Act, "to correct, and as rapidly as practicable, to eliminate labor conditions detrimental to the maintenance of the minimum standard of living necessary for health, efficiency, and general well-being of workers."

According to a study made by the Bureau of Labor Statistics among 34 cities in the country, the basic budget required for a minimum standard of living, for a family of 4, varied from $3,812 to $4,454. Even with these admittedly low budget figures and estimates it would require a minimum wage of $1.91 per hour to earn enough to meet the barest needs for a decent standard of living as defined by this study.

In dwelling upon this problem let us not forget the most impressive lesson of the unfortunate depression of the early 1930's, that lack of purchasing power in the hands of our lowest income families, who necessarily spend the most, brings about widespread unemployment, hardships, and economic stagnation. It profits us nothing to possess the greatest industrial production potential in the world if low wages and low consumer income prevent millions of Americans from buying these products.

Mr. Chairman, we are here obligated to enact laws designed to assist, not hinder, all those who are patriotically and conscientiously trying to be fair, honest, and decent in their employment obligations and industrial operations. We are here obligated to enact laws primarily designed to advance the general welfare. In compliance with and in the spirit of that high duty I urge you all to approve this minimum wage raise legislation now, while we, at the same time, pledge ourselves to be continuously and conscientionsly concerned with the further advancement of American living standards and national economic progress.

LEGISLATION FOR THE GOOD OF ALL AMERICANS

Mr. Speaker, over the past 4 years, as international tensions mounted, our country and the Congress have increasingly recognized that we can not hope to retain our boasted leadership in advocating freedom and liberty for all peoples everywhere if we continue to deny certain rights and privleges to some of our own citizens, including the right to vote in our State and National elections without harassment.

It became clearly apparent that we were losing much prestige among many peoples, particularly in Asia and Africa, because of this obvious contradiction and being subjected to embarrassing criticism and ridicule by the skillful propaganda organs of Communist Russia.

It was my privilege on May 21, 1956 to favorably report, on behalf of the House Judiciary Committee, of which I am a member, H.R. 627, of the 84th Congress, a bill which was known as the Civil Rights Act of 1956. With some amendments, this measure passed the House in 1956, but was not reached by the Senate before that Congress concluded.

At the beginning of the 85th Congress in 1957, this measure, under a new number, H.R. 6127, passed both the House and Senate and was signed by the President. It is identified as Public Law 315, of the 85th Congress, and was called the Civil Rights Act of 1957.

I am modestly proud of the cooperative part I played in providing the background that resulted in the passage of this law, which was characterized by authorities as the first real step forward in the field of civil rights in almost a century. This law, I am pleased to say, was improved and expanded in this 86th Congress.

Extracts from my remarks on this important legislation when it was presented to the House, and on other measures affecting the progress and welfare of all Americans follow:

CIVIL RIGHTS ACT OF 1960

(Monday, March 14, 1960)

Mr. DONOHUE. Mr. Chairman, as we are about to begin the day of decisive action on civil rights, reflecting that the Senate is entering its fifth week of deliberation on this subject, it may be pertinent to remind ourselves that the fundamental business of the Congress is to legislate.

Let us emphasize, further, to ourselves that our primary obligation in fulfilling this business to protect and expand the basic rights and freedoms guaranteed to our American citizens under the Constitution; paramount among such is the right to vote.

Our primary purpose here today is, then, to enact the best legislative measure that reasonable men can devise to insure every qualified individual in this Nation can exercise the right to vote in the fullest freedom.

We all realize that the legislative action along these lines that occurred in 1957 was the first real step forward in this field in almost a century.

In my own opinion, our exhaustive efforts should be exercised to have included in the final bill we approve provisions to effectively protect the right to vote through a system of either Federal registrars or referees; to eliminate the vicious and un-American hate bombings; to erect requirements for the preservation of voting records; to provide Federal education for children of service personnel in areas where public schools are closed; and to effectively prevent unwarranted and illegal obstruction, in any form, of duly issued Federal court orders in school-desegregation cases.

The encouraging eyes of all American citizens are directed upon the Congress today; the questioning eyes of allied and hesitating peoples abroad are centered upon us during this debate; the cynical eyes of the Kremlin leaders are fastened on the legislative capital of the world, waiting, with propaganda fangs exposed, to see if we can and will grant to each of our own citizens the rights and privileges we claim to espouse for all peoples everywhere. This is a fateful hour in the destiny of our blessed country, and the Congress is faced with one of the greatest legislative challenges of our history.

There is vital need for us to exercise restrained emotion, subdued prejudice, heightened conscience, and supreme patriotism for the welfare and preservation of America and the free world.

Let us be patient with each other, let us be tolerant of one another's deepest convictions, and let us resolutely unite in devotion to duty.

Above all, let us legislate. Let us decide that when our work is done we shall have enacted another milestone, for all the world to see, in advancement of the traditions upon which this great Nation was founded and upon which, the Creator willing, it will endure as the free world's leader against every provocation and every challenge of the Communist government of atheistic Russia.

SCHOOL CONSTRUCTION ASSISTANCE ACT

(Thursday, May 26, 1960)

Mr. DONOHUE. Mr. Chairman, because of the overwhelming evidence on record showing the urgent need of improving school facilities throughout the Nation, I rise in support of this bill granting reasonable Federal assistance to the States for such purpose.

There is no need for me to reiterate the testimony of the multitudinous officials of States and municipalities demonstrating that their various States are wholly unable to provide, from their own drained resources, the urgently required improvements in school facilities.

The two basic factors involved are the need for school improvements and the inability of the States to construct them. Since these two factors have been proved beyond question, it appears to me that there should be no reasonable doubt that this measure should be approved.

With full realization of the consequences that may follow from the collapse of the Paris summit meeting, there ought to be no uncertainty about the imperative necessity of accelerating our preparations to meet the Russian Communists on every front, including the educational front. Realistically admitting our past mistakes and factually facing the import of a long, continuing cold war atmosphere, let us wisely now take the steps to guarantee that our youth will be adequately trained to meet and beat the Communist challenges in the future.

There can be no better or wiser economic planning for the future security of America than a reasonable investment for the superior schooling of the country's children. Let us endorse and approve that practical investment today.

LABOR-MANAGEMENT REPORTING AND DISCLOSURE ACT

(Wednesday, August 12, 1959)

Mr. DONOHUE. Mr. Chairman, for the better part of 2 days we have been dutifully listening to the sponsors and proponents of these several labor-management reform proposals explain the substance of their different intends and designs, down to their last technical meaning and application. I think they should all be commended for their earnestness, sincerity, and painstaking efforts, even though we may not fully agree with each of them.

The fundamental that we should scrupulously recall is the basic axiom that punitive, extreme legislation, emanating from emotion, prejudice and misguided fervor is the worst sin that any legislative body can commit. All the pages of legislative history disclose that axiom and on it all legislative authorities agree.

Let us forcefully remind ourselves that the original intent and patriotic objective in dealing with this problem was to enact legislation that would rid labor-management operations of "crooks and gangsters," eliminate certain corrupt practices, while at the same time insuring that the rank and file American workingman and women is not deprived of the rights and benefits developed for themselves and their families through the legitimate activities of labor and management within our economic society. There are no irreconcilable provisions within the Senate passed measure and the proposals before us that cannot be sensibly fused and compromised by reasonable men.

Let us then look into our hearts, our minds, and our consciences in patriotic devotion to our duty of enacting a Labor-Management Reporting and Disclosure Act that will effectively cure the evils that we all decry while it preserves and strengthens the stability of our economic household, which, divided against itself, in adamant controversy, will surely fall an easy prey to the Communist enslavement design, almost on the eve of the visit of the chief Communist dictator to this Nation which proudly proclaims itself the cradle of justice.

SMALL BUSINESS ASSISTANCE ACT

(Monday, August 29, 1960)

Mr. DONOHUE. Mr. Speaker, it has been always an unquestioned American tradition that this Government shall aid, counsel, assist, and protect the interests of small business in order to preserve our democratic system of free competitive enterprise.

That is why I advocated and voted for the passage of the original legislation establishing a permanent, independent Small Business Administration agency. Recognizing the importance of our small businesses in defense production efforts and the national economy I have consistently urged every reasonable Federal assistance and guidance to them throughout my congressional service.

Last June this body approved H.R. 11207, designed to increase the Small Business Administration's revolving fund for its regular loan program, to provide for a wider participation by small business concerns in the subcontracting phase of Government procurement and to authorize the agency to set up a small business subcontracting program.

While this bill does not offer the complete assistance a good many of us have advocated it does contain elements of material encouragement and aid desperately needed by small business to survive.

Mr. Speaker, the House-passed measure, together with a Senate-passed version is now in conference. I most earnestly hope the leadership on both sides, in both Chambers, will use their combined influence in having the conferees reach sensible agreement and report the bill back for congressional action before adjournment.

VETERANS LEGISLATIVE MEASURES

(Monday, August 29, 1960)

Mr. DONOHUE. Mr. Speaker, as you and the Members are aware, it was my privilege, upon entering this House, to serve for 4 years on the Veterans' Affairs Committee. My activities, here and on that committee, on behalf of our veterans, their families, and dependents, are well-known and have been publicly recognized. Personal commendations, for these efforts, have been conferred upon me by the Disabled American Veterans, the Order of the Purple Heart, the Veterans of Foreign Wars, and the American Legion, as well as several other veterans organizations.

This Congress devoted considerable time to measures affecting our veterans and the record shows that more than 30 such measures were enacted into Law. Prominent among them, which I supported, were measures to extend for 2 years the VA direct loan and loan guarantee program; to increase the presumptive period to 3 years for service connection for the disease of multiple sclerosis; to expand the program of assistance for severely disabled veterans in acquiring suitable homes; to reimburse State veterans facilities to a maximum of $912.50 a year per veteran for care of veterans who would be eligible for treatment in VA hospital or domiciliary centers; to modify the educational training regulations to permit veterans to change their program under certain conditions to attain high educational degrees; and to authorize payment of service-connected death compensation to certain eligible widows of veterans.

WATER POLLUTION CONTROL ACT

(Tuesday, February 9, 1960)

Mr. DONOHUE. Mr. Speaker, I earnestly hope that this House will accept and approve this conference report without undue delay and extended debate.

The very title of the bill, the Federal Water Pollution Control Act, is indicative of its whole purpose to protect the lives and safety of American citizens and assist our various American communities in constructing the necessary sewage treatment projects. Certainly any program that has to do with the prevention of wholesale dangers to the lives of our citizens is of substantial economic worth.

The amount of money this bill would anually provide for the objectives that are outlined is within reason, and the objectives are of vital importance to the communities concerned.

The SPEAKER. The question is on the conference report.

The conference report was agreed to.

A motion to reconsider was laid on the table.

EMPLOYMENT FOR OLDER WORKERS

(Thursday, June 9, 1960)

Mr. DONOHUE. Mr. Speaker, there is still time and I most earnestly hope we will be granted the opportunity to act before adjournment on one of the many bills, including my own, H.R. 12106, which have been introduced and are designed to eliminate discriminatory employment practices on account of age by contractors and subcontractors in the performance of contracts with the United States and the District of Columbia.

The reluctance or refusal of employers to engage older workers is a national handicap. The report by the U.S. Department of Labor, conducted in 1956, disclosed that 58 percent of job openings had some upper age restriction; 52 percent barred workers 55 and over; 41 percent barred those 45 and over; and 20 percent barred those 35 and over.

There is then, Mr. Speaker, the obvious need for the establishment, now, of this public policy, and approval of this legislation ought not to be further delayed.

All of the measures proposed are in full accord with our basic American tradition; they are all economically feasible, and they are all in the best national interest. The impact of this proposed legislation is entirely reasonable and includes provision for formal hearings, judicial appeal, and the exercise of Presidential discretion.

In patriotic consideration of the national welfare and in Christian concern for our older workers, I sincerely hope that this proposed legislation will soon be placed before the Congress for action.

EXCISE TAX REDUCTIONS

(Wednesday, June 8, 1960)

Mr. DONOHUE. Mr. Chairman, I would like to make it plain that I have no objection against title I of this bill, providing for a temporary increase in the statutory debt limit, as requested by the administration. If that was the sole title and provision of this measure I would vote in favor of it as I have done in the past.

However, and unfortunately, title II of the bill, providing for the continuation of certain existing excise taxes presents a conscientious challenge to me and many other members of this body. It involves a matter of keeping faith with ourselves and the general public, as well as affording some little relief to persons and industries suffering severe economic distress. As you all know, when this subject was being acted upon just about a year ago the promise was made that certain excise

taxes, particularly in the field of telephone service and passenger transportation would be reduced and repealed.

These taxes, and others, were imposed during the World War II period, as emergency measures, and it was even then intimated they would endure only through the war duration; that time has long since passed. Today most of these taxed articles and services cannot be considered luxuries; they are closer to the nature of necessities. In many areas they create unusual and severe economic hardships upon persons and industries and there is real doubt about their overall economic soundness and wisdom.

Under these circumstances, together with the word that was made and the promise that is on the record, I am constrained to vote against this bill with the hope title I may be hereafter presented for separate consideration.

WORCESTER FLOOD DIVERSIONARY TUNNEL

(Monday, August 29, 1960)

Mr. DONOHUE. Mr. Speaker, it was a matter of very great, but humble, personal satisfaction to me, to attend recently, on July 8, last, the dedication exercises marking the operational opening and completion of the Worcester flood diversionary tunnel.

This flood diversionary project, primarily designed for the preservation of the lives and property of my fellow area citizens, is one of the most important things accomplished during my service in the Congress and I can assure you there was nothing upon which more concentrated work was expended.

In the pursuit of approval for the enabling and continuing appropriations legislative action necessary, covering nearly 5 years, I appeared three times before the House Public Works Committee, four times before the House Appropriations Public Works Subcommittee, and spoke several times in the House Chamber in support of this tunnel.

Its completion may well be considered a monument to those who lost their lives and family fortunes in the frightening flood waters and an inspiration to continue our united and persevering efforts to prevent the recurrence of such natural disaster tragedy from ever being visited again upon American citizens in this area, this State, or this blessed Nation.

I am pleased to include a statistical account of the yearly appropriations that were approved for the tunnel completion.

Yearly appropriations for Worcester flood diversion tunnel

Fiscal Year	Amount	Purpose
1956	$60,000	Surveying and planning.
1957	840,000	Begin construction.
1958	1,760,000	Continue construction.
1959	2,534,000	Complete construction, estimated June 1959.

BILLS INTRODUCED

Mr. Speaker, limited as this summary neccessarily is, it would be even more inadequate if a partial list of some of the measures I introduced in this Congress were not included; they follow:

House Resolution 109, a resolution calling upon Congress to take effective action against the spread of inflation and the high cost of living.

House Concurrent Resolution 36, a concurrent resolution expressing the sense of armament.

House Concurrent Resolution 677, a concurrent resolution expressing the sense of Congress that the United States should not grant further tariff reductions in the forthcoming tariff negotiations under the provisions of the Trade Agreements Extension Act of 1958, and for other purposes.

House Joint Resolution 429, a joint resolution to authorize the issuance of a gold medal in honor of the late Prof. Robert H. Goddard.

H.R. 2395, a bill to provide for the establishment of a U.S. Foreign Service Academy.

H.R. 2471, a bill to establish the Federal Agency for Handicapped, to define its duties, and for other purposes.

H.R. 2472, a bill to protect the right of the blind to self-expression through organizations of the blind.

H.R. 2473, a bill to amend the Internal Revenue Code of 1954 to provide a 30-percent credit against the individual income tax for amounts paid as tuition or fees to certain public and private institutions of higher education.

H.R. 2474, a bill to provide for unemployment reinsurance grants to States to revise, extend, and improve the unemployment insurance program, and for other purposes.

H.R. 2475, a bill to provide assistance to communities, industries, business enterprises, and individuals to facilitate adjustments made necessary by the trade policy of the United States.

H.R. 2527, a bill to provide for programs of public facilities construction which will stimulate employment in areas having a substantial surplus of labor, and for other purposes.

H.R. 2529, a bill to amend section 201 of the Immigration and Nationality Act, so as to provide that all quota numbers not used in any year shall be made available to immigrants in oversubscribed areas in the following year, and for other purposes.

H.R. 2868, a bill to reaffirm the national public policy and the purposes of Congress in enacting the Robinson-Patman Antiprice Discrimination Act entitled "An act to amend section 2 of the act entitled 'An act to supplement existing laws against unlawful restraints and monopolies, and for other purposes,' approved October 15, 1914, as amended (U.S.C., title 15, sec. 13), and for other purposes," and to clarify the intent and meaning of the aforesaid law by providing for the mandatory nature of functional discounts under certain circumstances.

H.R. 3161, a bill to incorporate the Paralyzed Veterans of America.

H.R. 8905, a bill to provide a health benefits program for certain retired employees of the Government.

H.R. 11113, a bill to amend title 38, United States Code, to provide for the payment of pensions to veterans of World War I.

H.R. 12033, a bill to provide for adjusting conditions of competition between certain domestic industries and foreign industries with respect to the level of wages and the working conditions in the production of articles imported into the United States.

H.R. 12106, a bill to eliminate discriminatory employment practices on account of age by contractors and subcontractors in the performance of contracts with the United States and the District of Columbia.

H.R. 12872, a bill to create and prescribe the functions of a National Peace Agency.

CONCLUSION—TIMELY COUSEL FROM A GREAT AMERICAN

Mr. Speaker, the words of wise authority remain forever as comforting beacons of guidance in troubled, distressing hours. A counseling message to all Americans is contained in the following extract from a speech given at Harvard University graduation exercises on June 30, 1910, by the late great Chief Justice Charles Evans Hughes:

"The most important agencies of democracy are, after all, not the organs of government, but the influences that shape public opinion. • • • Democracy must prize its public life. It has stripped it almost altogether of ceremonial and of meaningless and absurd forms. It has placed the public officer in a position of power, to be used for service. • • • Having surrounded him with none of the pomp which makes appeal to the thoughtless and ignorant, it must invest him with the higher honor which should be the reward of fidelity. Those who cultivate the true democratic spirit will be as earnest in their support of faithful officers as they are unsparing in their condemnation of the faithless."

Crispus Attucks, One of America's First and Noblest Heroes

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, August 30, 1960

Mr. CARLSON. Mr. President, John Wesley Dobbs, grand master of Georgia of the Ancient, Egyptian, Arabic Order, Nobles of the Mystic Shrine for North and South America, addressed the annual meeting of that body on August 16. His subject was "Crispus Attucks, One of America's First and Noblest Heroes," and was a testimonial to a great hero and to Negroes generally.

In his address Mr. Dobbs discussed the war record of Negroes, who have served in every war of this Nation, beginning with service in the Continental Army, under the leadership of Gen. George Washington. Theirs has been an outstanding record of service to our Nation, and deserves the commendation of all.

I ask unanimous consent that Mr. Dobbs' address be made a part of these remarks and be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CRISPUS ATTUCKS, ONE OF AMERICA'S FIRST AND NOBLEST HEROES

First, I would like to commend our imperial potentate, Hon. Booker T. Alexander, and his officers, for so wisely planning this commemorative testimonial program to a great hero. Next, we sincerely appreciate the splendid manner in which the city officials of the great city of Boston, Mass., have cooperated in making this event such a big success.

Crispus Attucks was undoubtedly one of America's first and noblest heroes. The New Standard Dictionary describes a hero as a man distinguished for valor, fortitude, or bold enterprise. That description correctly fits the subject of this discussion—Crispus Attucks.

The American Colonies had been having trouble with the English King, George III, about taxation. The Boston Tea Party, and subsequent events, had very definitely set up the issue in the minds of the Massachusetts colonists that "taxation without representation was unjust." Everybody knew what the issue was. Two regiments of British soldiers were sent over to help coerce the Boston people. Their presence on the Boston Common only made the situation worse; so, on March 5, 1770 a detachment of these British soldiers was called to King Street (now State Street) to preserve order. Instead of preserving order, and without just provocation, they

wantonly opened fire on the Boston citizens in King Street.

Crispus Attucks, a mulatto Negro, former slave, along with two of his compatriots were killed outright. Crispus Attucks was the first to fall. Eight others were wounded; two of whom died, bringing the total number of deaths to five. These five American citizens died because of their undying belief in the fundamental, bedrock principle of early American democracy—"taxation without representation is unjust"—that was the issue then, and it is still the bedrock issue in every world democracy today.

The people of Boston, and Massachusetts, had become obsessed with this spirit of liberty and freedom. They were in that frame of mind as they faced the British soldiers in King Street on March 5, 1770. The Boston Tea Party, and related events, had served to strengthen their zeal and fervor.

CRISPUS ATTUCKS

Not enough is known about Crispus Attucks. However, we do know that at the age of 27 he was listed as a runaway slave from the custody of Deacon William Browne of Framingham, Mass. Mr. Browne advertised in the Boston Gazette, October 2, November 13, and November 20, 1750, offering a reward of 10 pounds for the apprehension and return of Crispus Attucks. But Crispus Attucks was not to be found in 1750. He was not heard from again until 1770, 20 years later, when he was 47 years old. Where had he been? Where did he hide? Or where did he go? We do not know. Neither do we know where Jesus Christ spent 18 years from 12 to 30 years old. We only know that the time was well spent. Crispus Attucks might have gone to sea; he might have visited foreign lands; this we do not know; but, we do know that he was very much alive on March 5, 1770, when he showed up in King Street, Boston, Mass., with a big stick in his hand ready to die and to become one of America's greatest heroes. He died defending the honor, integrity, and self-respect of all American citizens, living then, and the ones to be born later on.

Crispus Attucks was practically unknown at the time, so his funeral was held from Faneuil Hall. He was buried in the famous Granary burying ground on Tremont Street. This monument, erected on Boston Common, was built to honor and commemorate all patriots who died in the Boston Massacre. I would have you bear in mind, however, that this event occurred 5 years and 3 months before the Battle of Bunker Hill; 6 years and 4 months before the Continental Congress at Philadelphia released the immortal Declaration of Independence, and broke the Liberty Bell, proclaiming to the world "that all men are created equal." Two things Crispus Attucks did at Boston, March 5, 1770:

(1) He firmly established himself as a man of valor, fortitude, and bold enterprise. He believed in that most precious American heritage of freedom.

(2) He made the downpayment on liberty and freedom for all members of his racial group who were to live after him in this fair land as American citizens. Crispus Attucks made the downpayment for you and me at Boston when he died with a stick in his hand.

NEGROES IN AMERICA

Today we have close to 20 million Negroes who call America home. We have been here just as long as anybody else. We have truly paid a very dear price to stay here.

Black men first came to the new world with the early explorers. Black seamen were with Columbus in 1492; Balboa 1513–15; Cortez 1518–21; Desoto in 1540; and with Menendez at St. Augustine, Fla., when in 1565 he built the first city in America.

Jean Baptiste Point DuSable, a black fur trapper from the West Indies, built the first house where the city of Chicago now stands.

In 1537 Estivineco (Big Steve), a black Spaniard, led 600 men across the Texas frontier and opened up the great Southwest region of our country now known as Arizona and New Mexico. Big Steve, 6 feet 3 inches tall, a black Spanish doctor, was the leader of this expedition sent out by Cortez from Mexico.

From 1492 to 1619, a period of 127 years, black men came to the New World with the early explorers, and as freemen. Chattel slavery was forced upon black men and women beginning at Jamestown, Va., in 1619. This diabolical system lasted until January 1, 1863, for a period of 244 years. These terrible circumstances and conditions were almost inhuman and unbearable. Negro men and women worked and suffered for 244 years, without a payday. Nevertheless by the help of Almighty God, their descendants have still survived. Today they are calling for their civil, economic, and political rights.

THE DOWNPAYMENT

Crispus Attucks made the downpayment for us at Boston on March 5, 1770. Peter Salem made another payment at Bunker Hill, June 17, 1775, when he turned the tide of battle by killing the British commanding officer, Major Pitcairn. Since then the Negro has paid with sweat, blood, and tears, all the way from Bunker Hill to Korea—and has not produced a single traitor to the flag.

OUR LABOR

The sweat from the brows of our ancestors fell in ricefields, cotton plantations, railroad cuts, in the forests, and along the mountain sides. Negro labor became famous by the way in which it helped to build America. The work song about John Henry symbolizes the Joe Louis of labor dying with his hammer in his hand.

OUR WAR RECORD

Approximately 5,000 Negroes saw service in the Continental Army under Gen. George Washington. In 1812 black men were with the Marines, and in the Navy. They were with Perry on Lake Erie. They helped Gen. Andrew Jackson save the day at New Orleans, January 8, 1815. During the Civil War (1861–65), 178,975 were enrolled in the Union Army. Thirty-six thousand, eight hundred and forty-seven Negro soldiers lost their lives in this struggle, winning their own freedom and preserving the Union of the States. The 54th and 55th Massachusetts State Militia were the first Negro units to be mustered into the Union Army. Col. Robert Gould Shaw left Harvard College to lead the 54th. He was killed in action in South Carolina. Don't leave Boston until you see his monument in front of the State House done in bronze by Augustus St. Gaudens, one of America's outstanding sculptors.

After the Civil War, and during the Spanish-American War, the 9th and 10th Cavalry, and 24th and 25th Infantry were organized as Negro military units to be officered by white men. These black soldiers gave a good account of themselves, at all times. In Cuba, Black Jack Pershing was a Captain in the 10th Cavalry at San Juan Hill. Theodore Roosevelt, who was with the famous Rough Riders, said Pershing was the bravest man he had ever seen under fire. After reaching the White House, as President, Roosevelt promoted Pershing, by an executive order, from the rank of captain to that of brigadier-general.

In World War I, 404,348 Negroes served in the U.S. Army. Of this number, 1,353 were commissioned officers.

In World War II (Dec. 1, 1941 through Aug. 31, 1945) approximately 920,000 Negro personnel served in the U.S. Army and Air Force. Of this number 8,600 were officers. Today, we have a West Point graduate, Maj. Gen. B. O. Davis, Jr., commander of an American Air Force squadron based somewhere in Europe.

Thus you see the American Negro has truly paid the price. That is exactly why the 13th, 14th, and 15th amendments were placed in the U.S. Constitution. They deserve to be there and deserve to be obeyed. American Negroes are fighting for, demanding, and dramatizing today, for the full and complete enforcement of these amendments. They have been in the Constitution for 90 years, or longer. Our Negro college students, often assisted by white fellow students, are walking picket lines, and staging "sit-in" demonstrations for these rights. Again, a moral issue is at stake. These college students will not be willing to wait supinely serene, like their fathers did, for lo these many years; but they are protesting to High Heaven, and in God's name, for justice—right now—if not sooner.

They know that the world rises on protest. They know that the Protestant church was built on protest and sacrifice. They know that Paul and Silas had to dramatize a jailhouse demonstration before they could worship God at Phillipi.

Thus, my friends, will the American Negro continue to protest against old man Jim Crow, and racial segregation, until they are driven from every American public place, North, South, East, and West. For as the poet says:

"The World Rises on Protest—and, to sin by Silence,
When we should Protest—Makes Cowards out of men."

Unfinished Business

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, August 29, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article about Robert Frost, which appeared in the Boston Sunday Herald, on August 28, 1960:

UNFINISHED BUSINESS

(By Donald Culross Peattie)

I suppose everyone who has been privileged to talk a while with Robert Frost has come away treasuring a memory of that conversation fruity with wisdom. After such an hour with the great but easy old poet, beside the hearth at his Vermont farm, I found the casual words above to linger longest in my thoughts.

Roll them about in your mind, you worried and hurried ones. Savor the richness of time and patience, of hope and faith, that lies in this simple utterance. For there is much in the business of our lives that we cannot hasten, for all the urgency of speed that today devils us. There is much—and this is true of the most important of our affairs—that cannot be concluded in a day, or a week, or a month, but must be let to take a guided course. We are too prone to bring it with us to our rest, and thrash it over uselessly. So I, for one, over and over, give thanks for the slyly sensible remark by Robert Frost.

He was, when I come to think of it, living as nature lives. When an acorn fallen from an oak at last splits husk, sprouts, and begins to take root, how much unfinished business lies ahead of it. It has

no contract with the sun and rain to have become an oak tree by a certain date. But with their help it will grow until it towers and spreads shade, in the good time we call God's. We ought as trustingly to let our plans and problems ripen to solution, knowing there is another Hand in the business beside our own. To leave a question to unfinished business is not to abandon the task. It is to attain the serenity which will give us strength to carry on with it when the call to effort comes.

Retreat Under Cover

EXTENSION OF REMARKS
OF
HON. MORGAN M. MOULDER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 30, 1960

Mr. MOULDER. Mr. Speaker, the St. Louis Post Dispatch is one of the few remaining great and independent newspapers in the United States. The editorials of this paper are highly respected and the following editorial is an example of this paper's understanding of our national and international problems:

RETREAT UNDER COVER

The net of the new controversy over the military budget appears to be that the administration has yielded to Congress in agreeing to spend more money on certain functions, but has thrown up a cloud of gobbledygook which obscures the full picture. Apparently the purpose is to give an impression of greater military effort without actually increasing it very much.

Senator LYNDON JOHNSON, who had demanded to know what the administration planned to do about the $661 million which Congress voted beyond the President's defense budget, is convinced that the administration still intends to freeze some $621 million of the extra funds. President Eisenhower denied this at his press conference, but was not convincing. Senator JOHNSON is probably right in saying that the President failed to understand that funds designated by the Pentagon as in an unallocated status or available for future requirements are really frozen, as of now.

If true, this means that the total military effort, as presently planned, is not going to be much greater than it was originally intended to be. That is not enough, and Senator JOHNSON is justified in saying so.

The new spending plan presented by Secretary Gates in response to Senator JOHNSON'S prodding apparently contemplates for developing airborne alert capabilities of the Strategic Air Command $170 million, just double what the administration originally proposed. But it does not use $100 million of extra funds which Congress made conditionally available. In practical terms this means that 60 bombers will have alert capabilities next March instead of 160.

Similarly, the new plan contemplates using only half of the extra $200 million Congress voted for developing the supersonic B–70 bomber, allotted $75 million in the original administration budget. In practical terms this means developing the B–70 as a nonmilitary prototype instead of as a complete weapons system.

Army modernization likewise gets only part of the funds Congress voted for it, and so on. Furthermore, the administration has not told Congress and the public what programs it intends to cut in order to make the funds available for these expanded programs. If Senator JOHNSON is right, and the total military effort is to be close to the original budget, then obviously substantial cuts must be contemplated somewhere.

We believe Congress has a right to demand full and explicit information from the administration, and the duty to keep prodding it for a stronger military effort. The changes so far made amount to an admission that the original administration budget was inadequate in certain specifics. This raises a strong presumption that it was also inadequate in total, and should be corrected.

Mr. Speaker, the Constitution of the United States delegates to Congress the power to:

Provide for the common defense and the general welfare of the United States.

To raise and support armies.

To provide for organizing, arming, and disciplining the militia and for governing such part of them as may be employed in the service of the United States.

The Congress not only has the right to demand full and explicit information, it is the duty of Congress to perform the authority delegated by the Constitution.

Progress Report of Subcommittee No. 3 of the House Committee on the District of Columbia on S. 1456—A Bill To Provide the Appointment of Two Additional Judges for the Juvenile Court of the District of Columbia, August 28, 1960

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 30, 1960

Mr. DAVIS of Georgia. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and report:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., August 30, 1960.

Hon. JOHN L. MCMILLAN,
Chairman, Committee on the District of Columbia, House of Representatives, Washington, D.C.

MY DEAR MR. CHAIRMAN: I submit to you herewith a progress report of Subcommittee No. 3 on Senate bill, S. 1456.

The subcommittee is planning to meet during the congressional recess for further consideration of this legislation and the information we have gathered.

Sincerely yours,

JAMES C. DAVIS,
Chairman.

PROGRESS REPORT OF SUBCOMMITTEE NO. 3 OF THE HOUSE COMMITTEE ON THE DISTRICT OF COLUMBIA ON S. 1456—A BILL TO PROVIDE THE APPOINTMENT OF TWO ADDITIONAL JUDGES FOR THE JUVENILE COURT OF THE DISTRICT OF COLUMBIA, AUGUST 28, 1960

During the 85th Congress H.R. 7785 was introduced providing for the appointment of one additional judge to the juvenile court of the District of Columbia. This bill was approved by the House Committee on the District of Columbia, passed by the House of Representatives, and was amended and passed by the Senate. The bill did not emerge from conference committee in time for final passage before adjournment of the 85th Congress.

Following the opening of the 86th Congress, S. 465, calling for the appointment of an additional judge to the juvenile court was introduced in the Senate. The Senate Committee on the District of Columbia held hearings on the bill in February 1959. Later, the committee favorably reported S. 1456 calling for the appointment of two additional judges of the juvenile court of the District of Columbia. The bill was thereafter passed by the Senate.

In July 1959, this subcommittee of the House Committee on the District of Columbia held hearings on S. 1456. Hearings for 2 additional days were held in December 1959. Evidence was received showing that the one-judge court had disposed of cases more rapidly than the rate of new cases filed and had reduced the court backlog by about 10 percent during fiscal year 1959. This fact, along with other information developed during the hearings, dictated the need for further study before any decision was reached on the two-judge bill. Committee staff was directed to develop more fully information on the past history of operation of the court, its caseload and organization, coupled with statistical data on at least part of the court's operation for fiscal year 1960.

Preliminary figures for fiscal year 1960 indicated a reversal in the trends shown by the court in 1959. With the very recent availability of final statistical information for fiscal year 1960, the subcommittee now has before its sufficient data, testimony, and evidence of record on which to reasonably gauge the problems of the juvenile court, its needs, and what legislation may be necessary to assure an adequate, efficient, and effective juvenile court in the District of Columbia.

PART I—TESTIMONY AND STATISTICAL RECORDS

Extensive testimony on the operation and needs of the Juvenile Court of the District of Columbia is a matter of record, in hearings before the House Committee on the District of Columbia, the Senate Committee on the District of Columbia, the House and Senate Committees on Appropriations, and the Senate Judiciary Subcommittee on Juvenile Delinquency, in addition to statistical reports. Many prominent persons from District of Columbia courts, law enforcement agencies, and community organizations testified regarding S. 1456. Most witnesses expressed their sincere belief that the enactment of S. 1456 was the principal need of the juvenile court. Some witnesses urged other amendments to the Juvenile Court Act of the District of Columbia.

Testimony of record before this subcommittee and the Senate Committee on the District of Columbia indicates that the support for the appointment of two additional judges was premised mostly on the following: (1) The great volume of hearings in the juvenile court; (2) the heavy backlog of cases pending in the court; and (3) population comparison studies with other cities relating the number of sitting juvenile court judges in those cities to the population.

1. Volume of juvenile court hearings; witnesses testifying before the Senate Committee on the District of Columbia in February 1959 on S. 465 expressed the view that the volume of court hearings alone was persuasive that two additional judges were needed and that "the single statistic of some 13,000 hearings" was sufficient to prove the point.[1]

In July 1959, following the passage of S. 1456 by the Senate, this subcommittee of the House Committee on the District of Columbia held public hearings on the two-judge proposal. Again principal witnesses referred to the number of hearings as being a most significant factor in support of the bill. However, the number of hearings was then placed at 10,000 for the previous year.[2]

Footnotes at end of speech.

In December 1959, for the 2 days of committee hearings, there was available to the subcommittee the first annual statistical report of the juvenile court which had been issued in October for the fiscal year 1959. Table 21 of this document, reported that the total of all court hearings on juvenile and adult cases for the year was 5,192. Included in this figure were 149 court trials and 32 jury trials.

Thus within a period of about 10 months the reported hearing load of the court, as represented to congressional committees dropped successively from 13,000 to 10,000 to less than 5,200. This indicated the need for further study of the operation of the court.

2. Backlog of cases: Prior to the change in the judgeship in the juvenile court of the District of Columbia in May 1957, there had been no backlog of cases for several years, either as to juvenile or adult matters. During those years, when the court kept its docket free of any backlog, there was an average of 450 more cases filed with the court per year than during the fiscal years beginning in 1958. The court kept its caseload current.

No tabulation of the juvenile court backlog, which began accumulating in fiscal year 1958, is available prior to September 1, 1958, shortly after the end of the fiscal year. At that date, the backlog was 270 juvenile cases and 552 adult cases for a total of 822 cases.[3]

During fiscal year 1959, the juvenile court reduced its backlog by about 10 percent and ended the year with a backlog of 235 juvenile and 510 adult cases for a total of 745 cases.[4] During fiscal year 1960 the number of juvenile and adult cases filed with the court increased by 337 but the backlog rose to a total of 1,667.[5] The increase in the court's backlog exceeded the increase in cases filed by 585.

The relation between the backlog of cases in the juvenile court and the need for additional judges must be weighed in the light of the following: (1) That for fiscal years prior to and including 1957, with a substantially greater number of cases, the court had no backlog accumulation; (2) that during fiscal year, 1958, with 500 fewer cases filed than for the average of the preceding fiscal years, the court suddenly accumulated a backlog of 822 cases; (3) that with 3 percent fewer cases filed in fiscal year 1959 than in 1958, the court reduced its backlog by about 10 percent; (4) that during fiscal year 1960 with an increase of approximately 350 in the number of cases filed, the backlog increased by more than 900 cases for a total of 1667.

3. Comparison of the District of Columbia with other juvenile court jurisdictions: Determining the need of judges in the juvenile court of the District of Columbia by comparing juvenile courts in other cities, brings into consideration many factors which cannot be accurately weighed for such purposes. The jurisdiction of courts in other cities may be broader or narrower; the age limit may be lower; in some cities juvenile problems are handled by family courts with similar or broader jurisdiction than that of the juvenile court in the District; in some cities, all juvenile complaints are transmitted directly to the juvenile court while in others, of which Washington is one, juvenile complaints are screened by a juvenile division of the police department and only those cases involving other than minor offenses or second time offenders are transmitted to the juvenile court; also, the number of offenders per thousand population may vary considerably on different cities.

In hearings before various committees of Congress, testimony is on record comparing the population of the District of Columbia with that of other cities and relating the population comparison factor to the number of judges in the particular cities to establish the basis for additional judges in the juvenile court of the District of Columbia.[6] Studies made by the subcommittee staff indicated that if a three-judge court proposed by S. 1456 were established in the District of Columbia, and the same formula applied to the other cities, it would be necesasry to appoint additional judges in the cities used for comparison if they were to conform to the population-judge ratio proposed for the District in S. 1456. To illustrate, the juvenile court in Cleveland, Ohio, serves the metropolitan area within Cuyahoga County.[7] Placing the population of the District at 800,000 (the 1960 census shows substantially less) and applying the three-judge formula of S. 1456, the Cleveland court should have six judges since it has twice the population to serve. Cleveland has three judges, the third being appointed just about 2 years ago.

PART II—AUTONOMY AND MANAGEMENT OF THE COURT

Under the Juvenile Court Act of the District of Columbia, the juvenile court is autonomous. It operates solely under the authority of the sitting judge and there is no supervision of its functions or management by any other judicial official or administrative official in the District of Columbia.

Under these circumstances, the effective and efficient operation of the juvenile court calls for the application of multiple skills. In addition to an understanding of the responsibilities and duties placed upon the court by the Juvenile Court Act, an understanding of juvenile court law and procedures, and the exercise of judicial capability, the judge of this court must likewise have the capacity to cooperate closely with agencies whose functions may be related to the court, and the capacity for supervising and managing a considerable staff of employees.

The closest relationship the juvenile court has with any other body in the District of Columbia is with the municipal court of the District by reason of provisions of law calling for the assignment of judges from the municipal court bench to the juvenile court in the absence of the judge or the event a vacancy exists in the juvenile court.

Early in fiscal year 1958, management studies were started looking forward to the reorganization of the juvenile court.[8] The management office of the District of Columbia assisted the court in this work. Visits were made to juvenile courts in other cities to study their operations and discover methods which might be advantageously used. As a result of these management studies, the court procedures were streamlined. Duplicate operations eliminated where possible, recordkeeping mechanized and simplified, and other changes made to relieve the judge of burdens and to facilitate the smooth functioning of the court at staff levels. The court was given an administrative division, not found in the organizational structures of other courts in the District.

Appropriations were increased in excess of $250,000 between fiscal year 1957 and the current fiscal year and 22 new positions were authorized. Despite these facts, and with a decrease in the average number of cases filed, the court backlog rose from zero at the beginning of fiscal year 1958 to 1,667 at the end of fiscal year 1960.

The Juvenile Court Act of the District of Columbia gives to the juvenile court the exclusive jurisdiction in determining the paternity of illegitimate children and concurrent jurisdiction with the U.S. district court in criminal nonsupport cases.[9] The handling of these adult cases, is not only directly related to the well-being of those for whom support is ordered by the court but also to the financial burdens of the department of public welfare. The statutory function of the court is to determine legal obligation and necessity of the support and to enforce its judgments.

In connection with criminal nonsupport cases, the court at one time discontinued scheduling such cases for court action. The court has indicated that such cases are given lowest priority rating of all matters within its jurisdiction.[10]

Collections in adult cases involving support matters increased steadily through the end of fiscal year 1957, when court collections totaled $945,677. Beginning in fiscal 1958, and even with the reorganization of the court, collections declined each year to a point approaching $450,000 less than the amount collected in fiscal year 1957.

In connection with the justification of requests for appropriations for the court for fiscal year 1959 to provide additional positions, it was stated that certain additional employees might increase the court's collections by about $200,000 per year.[11] The new positions were authorized and within a few months thereafter the intake section handling support cases was abolished, the employees transferred, and the workload shifted to the Office of the Corporation Counsel who was compelled to request additional employees to assume the additional work. Collections thereafter continued to decline.

At Appropriations Committee hearings the following year, explanation of this action was requested.[12] Discussion was had concerning the transfer of adult cases from the juvenile court, and testimony was taken concerning the effect of court's action on the operations of the Office of the Corporation Counsel and the Department of Public Welfare. The court there and elsewhere expressed its "chafing" under the adult problem imposed by the Juvenile Court Act.[13]

The following tables present in summary form, the essence of statistical figures concerning the operation of the juvenile court in the years preceding and including fiscal year 1957, and the 3 succeeding fiscal years to the present. Table 1 deals with appropriations, personnel, caseload, backlog, and court collections. Table 2 relates the appropriations or cost of operation of the court to the amount of the court collections on a per case filed basis. The figures used are extracted from hearings before Committees on Appropriations of the House and Senate, hearings before the House Committee on the District of Columbia, and from the statistical reports of the juvenile court for fiscal 1959 and the quarterly reports for fiscal 1960, by quarter or cumulatively for the year.

CHART I

Statistics relating to cost of operation, cases filed, case backlog, and collections, District of Columbia juvenile court

Fiscal year	Appropriation	Number of authorized positions	Number of cases filed			Backlog of cases			Collections
			Juvenile	Adult	Total	Juvenile	Adult	Total	
1954	$327,000	72	2,057	1,407	3,464				
1955	347,000	74	1,757	1,516	3,273				
1956	407,000	80	1,877	1,797	3,674				$785,000
1957	428,000	81	1,846	1,878	3,424				945,677

Footnotes at end of speech.

CHART I—Continued

Statistics relating to cost of operation, cases filed, case backlog, and collections, District of Columbia juvenile court—Continued

(Present judge took office at this point)

Fiscal year	Appropriation	Number of authorized positions	Number of cases filed			Backlog of cases			Collections
			Juvenile	Adult	Total	Juvenile	Adult	Total	
1958	$490,900	86	1,870	1,027	2,897	270	552	822	$626,415
1959	573,000	95	[1] 1,840	993	2,833	235	510	745	511,931
1960	620,000	97	1,685	1,485	3,170	502	1,165	1,667	506,040
1961	689,700	103							

[1] Comparison of the statistical reports of the court for fiscal years 1959 and 1960 indicates that the method of reporting was changed in 1960. There was no table in the 1959 statistical report showing new petitions filed with the court. The 1959 figure of 1,840 for juvenile petitions used in chart 1 may be slightly in excess of the total number of new juvenile petitions filed in the court. The figure of 1,685 new juvenile petitions filed for fiscal 1960 is a cumulative total taken from table 9 of the quarterly reports. However, the cumulative total of table 1 shows an intake of 3,243 individual juveniles. Table 7 shows disposition of 2,030 new juvenile petitions. As to new adult petitions, the cumulative total of the quarterly statistical reports of the court shows in table 9, 1,485 new adult petitions. Table 8 shows a total of 1,720 new adult petitions. The Assistant Corporation Counsel's Office indicates a total of 1,390 new adult petitions filed.

CHART II

Fiscal year	Net difference between court collections and court operating costs	Net difference per case filed	Backlog of cases
1956	+$378,000	+$102.88	None
1957	+517,677	+151.19	None
(Present judge took office at this point)			
1958	+$135,515	+$46.77	822
1959	−61,069	−21.55	745
1960	−113,960	−35.00	1,667

The essence of these charts is that through fiscal year 1957 the juvenile court, with a significantly great number of cases filed, operated on less money, had fewer employees, greatly increased collections, and had no backlog. From fiscal year 1957 to date this court has been reorganized, received increased appropriations, given additional personnel, had fewer filed cases, but collections have dropped precipitately and a large backlog has developed. All steps which might be expected to improve the operation of the court seem to have had the opposite result.

Related directly or indirectly to the autonomy and management of the court are the conflicts and confusions which have developed between the court and other District agencies. Mild to severe conflicts have been noted in the press and have been the subject of attention by House and Senate Appropriations Committees. Involved have been the Office of the Corporation Counsel, the Youth Aid Division of the Police Department, and the Department of Public Welfare. Conflicts related to the handling of adults charged with contributing to delinquency, handling of support cases, control over juveniles committed for rehabilitation, referral of juvenile first offenders involved in very minor infractions, and other problems. To minimize such incidents, clarifying amendments may be necessary.

PART III—AMENDMENTS TO THE JUVENILE COURT ACT

The subcommittees feels that the foregoing parts of this report indicate a court that is in genuine difficulty. In no other facet of the judicial system do delays have more far-reaching consequences to the community than in a juvenile court. The decision of the Congress must be such as to bring the caseload in the juvenile court to current status and insure that it be kept current. The loss of more than $400,000 per year in court collections must be corrected.

First considerations leading to legislative action to assure an efficient and effective court are: (1) Will additional judicial personnel alone provide efficient handling of the court load? (2) Should the juvenile court continue as an autonomous body? (3) If supervision is needed, should the juvenile court become a branch of the municipal court or a unit within the domestic relations branch of the municipal court of the District of Columbia?

Subordinate to the above major issues, but meriting attention, are other amendments suggested to the subcommittee or which have appeared as closely related to juvenile matters.

1. Referees: Referees are used in many juvenile courts. The referee usually handles less serious offenses and places his findings and recommendations before the judge for final action. Under procedure instituted by the court about 2 years ago, the Director of Social Work conducts hearings. This procedure closely parallels that used in courts served by referees. These director's hearings have reduced the caseload handled by the court since a substantial portion of juvenile cases have been disposed of at that level.

2. Waiver by the court: Under terms of the Juvenile Court Act, the judge may waive to the U.S. district court the case of any juvenile 16 years of age or older who has committed an offense which would constitute a felony. Pending court action or after disposition, the same juvenile may be brought before the juvenile court for another offense. If the offense is a misdemeanor, the case cannot be waived and the same juvenile has cases pending before both the juvenile and adult courts. Waiver of the child rather than the offense would prevent such a contradiction wherein the same person is a juvenile offender in one court and an adult criminal in the other court.

3. Determining sufficiency of complaints at intake: Complaints against juveniles referred to the juvenile court are not evaluated for their legal sufficiency at the time of referral. After a complaint has been investigated and a full social study made, a determination is reached as to whether the case shall be petitioned to the court. If it is to be petitioned, the legal sufficiency of the complaint is determined by the Assistant Corporation Counsel. If there is inadequate legal basis for action, the case is dropped. Power in the hands of the Corporation Counsel to determine whether a complaint shall be petitioned to court before other disposition and determine the legal sufficiency of complaints at intake may better protect the interests of the public, the juvenile, and save staff time and effort.

4. Jury trials for juveniles: The juvenile court of the District of Columbia must grant a jury trial to a juvenile when request is made under terms of the Juvenile Court Act. This may be the only jurisdiction where such right is provided in law. The Judicial Conference of the District of Columbia recommends that the jury-trial provision for juveniles be repealed.

5. Waiver of incorrigible habitual offenders: The repeat offender, demonstrably not yielding to rehabilitative efforts, and whose offenses remain misdemeanors, is beyond the benefit of services offered by the juvenile court. Power to the juvenile court to waive such offenders for commission of misdemeanors to the municipal court would remove them from contact and association with other juveniles who might be influenced to their detriment.

6. Lowering of age limits: The present age limit for juveniles is 18. The great majority of repeat offenders and hardened young criminals are found between the ages of 16 and 18. Lowering the age limit below 18 for all offenders or only repeat offenders, for felonies or felonies and misdemeanors, would remove those beyond probable help by the juvenile court rehabilitation resources and minimize their potential of detrimental influence on other juveniles.

7. Opening court records: Present law closes the records on juvenile cases to the public and the press. In consequence the press refrains from printing names of juveniles involved in crime regardless of the source of information. Strong authority is found on both sides of the issue of secrecy of juvenile files. Whether secrecy has helped to promote increased delinquency or whether it has been a brake on an increase which would otherwise have been more rapid cannot be demonstrated by any proof. Opening records of juveniles 16 and over may merit examination in the light of present trends and beliefs of juvenile experts.

8. Juvenile traffic cases: The juvenile 16 years of age enjoys the status and privileges of an adult as to driving a car with the exception that he must go to the juvenile court for any violation of traffic regulations, including those minor violations for which an adult may post collateral. It is questioned if such minor violations constitute delinquency. Removal of such minor violations from the court's jurisdiction will lighten the court's load without increasing delinquency rates in the District of Columbia.

The Kelly Amendment to the 1955 Federal Voting Assistance Act

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 30, 1960

Mrs. KELLY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

STATEMENT BY NEIL M. LIEBLICH, DIRECTOR OF THE DIVISION FOR SERVICEMEN'S VOTING OF THE STATE OF NEW YORK, IN SUPPORT OF H.R. 8432, INTRODUCED BY THE HONORABLE EDNA F. KELLY, MEMBER OF CONGRESS, 10TH DISTRICT OF NEW YORK

I am deeply honored at the privilege accorded me today to present my views on the subject of the amendment to the 1955 Federal Voting Assistance Act proposed by the Honorable EDNA F. KELLY in her bill, H.R. 8432. I am the Democratic member of the Division for Servicemen's Voting of the State of New York, a bipartisan body established for the purpose of cooperating with and assisting the U.S. Army, Navy, and Air Force, postal authorities, and any Federal agency which may be created for the distribution and collection of military ballots.

Ever since 1942, the Legislature of the State of New York has been in the forefront of those patriotic and interested Americans who have been determined to safeguard the sanctity of the ballot of our citizens serving in the actual military service of our country. Each year the New York State Legislature has passed enabling legislation to facilitate voting by New York State residents in the Armed Forces, as well as their spouses, parents, and children who may be traveling with them and who are qualified to vote in the general and special elections held in the State of New York.

I mentioned that I am the Democratic member of the two-man division in New York State. My Republican counterpart, the Honorable Herman Winner, joins with me fully in support of the Kelly amendment. In brief, both major political parties in New York State believe that it would be to the best interests of the servicemen and any eligible relatives who may be with them if section 203 of the 1955 Federal Voting Assistance Act were amended to provide for "in hand" delivery of applications for military or absentee ballots by the proper officers of the armed services instead of the present inadequate provisions of the Federal law which make such applications available upon request.

During the past 18 elections, when our Nation was both at war and in peace, it was very evident to my Division for Servicemen's Voting and to its predecessor State War Ballot Commission that the thousands of servicemen who wrote to us were sincere in expressing thanks to us for having provided the machinery whereby they could apply for and vote by mail military or absentee ballots while they were stationed away from home. Some were thousands of miles away from the local election polling precinct in which their ballots were counted. It was wonderful for their morale. It is wonderful now for their morale because it accentuates the fundamental concept of Americanism—the right of franchise, the right of a free people to select the governing officers of their village, city, State and Nation by a secret ballot, without fear or restraint. Men and women in service who are accorded the facility of voting by making a written application by mail for a military or absentee ballot are the beneficiaries of the great American way of life. Certainly the records in New York State clearly evidence that we have made a wonderful impact upon the servicemen of our State by what we have been able to do for them in the area of voting during these past 18 years.

Before the enactment of the 1955 Federal Voting Assistance Act, we strongly urged the inclusion of the provisions for the "in hand" delivery of applications to every male and female in the service of the United States within and outside the continental limits of our country. We based our suggestions upon actual experiences. We knew, and hence we recommended, that only by "in hand" delivery of applications for military or absentee ballots could we be assured of the participation of the greatest number of servicemen and their relatives in each general election.

To illustrate: In 1944, a year when the Federal law mandated the armed services to deliver an application for a military or absentee ballot into the hands of every man and woman in the service of our Nation in and outside of the United States, more servicemen in the State of New York voted in the presidential election that year than ever voted before or since in any general election during war or peace times. Not only was the number that voted that year unprecedentedly high but the percentage of participation by servicemen was greater than at any time—before or since. Thereafter, when the provisions for the mandatory delivery of applications in hand was eliminated from the Federal voting laws, and instead provision was made for the availability of applications upon request, fewer and fewer servicemen participated each year. Here is the record in New York State from 1945 to 1950, after 640,809 servicemen applied for military ballots in 1944 and 413,225 actually voted:

Year	Applications	Voted
1945	41,645	26,816
1946	1,987	1,491
1947	1,702	1,318
1948	3,768	3,203
1949	880	737
1950	3,945	3,092

Investigation revealed that the announcement or announcements that the applications for military or absentee ballots were available were not meaningful to the members of the Armed Forces. The importance of thereafter asking some voting officer for application was never stressed. Reliance by servicemen upon receiving an application—and then not getting an application—resulted in subsequent disappointment to them because they felt they had been deprived of their right to vote. Our office in New York was flooded with complaints that they could not vote. We are unable to help them because they had never filed applications for military ballots. When we so advised these servicement, they demanded to know why they had not received applications.

It is our belief in the State of New York that the reason for the tremendous falloff in the number of applications was the passage of Public Law 348, 79th Congress, on April 19, 1946, when the provisions for the "in hand" delivery of applications to servicemen were deleted from the Federal voting laws and were replaced by the provisions whereby applications were made available upon request. Suffice it to say that we felt so strongly about it that we prevailed upon the gracious gentlewoman from New York, the Honorable EDNA F. KELLY, to introduce a bill at that time to amend the Federal voting laws once more to mandate "in hand" delivery of applications. The Kelly amendment was passed at the 2d session of the 81st Congress and became the law on September 29, 1950. It is obvious that the lateness of the passage of the amendment that year could not have more than a token effect upon the number of applications received in New York State. We were delighted to process 3,945 applications in 1950—more than 3,000 in excess of the number received before "in hand" delivery was mandated.

With in hand delivery during the year 1951–54, New York State servicemen participated in greater numbers in the general elections. The number of applications rose to 10,147 in 1951; to 84,547 in 1952, a presidential election year; and fell off in an off-year 1953 to 4,870, which was a year comparable to 1949 when only 880 applications were received in New York State; and up to 15,047 in 1954.

When the present Federal Voting Assistance Law was a bill pending in the Congress in 1955, we were surprised to learn that the mandatory provisions of in hand delivery were being eliminated. We urged that in hand delivery be mandated. Mrs. Kelly sought to amend the then proposed bill. Our efforts were in vain—and, in the opinion of the directors of the Division for Servicemen's Voting in New York State, without any reason or basis therefor. We can safely say that every voting official with whom we have ever discussed the problem during the past 18 years has been in agreement with us that we should have in hand delivery of applications to servicemen. That does not mean that we have to line our servicemen up and march them to a polling place. That does not mean that we have to force servicemen to vote. All it means is that we, the civilians, make it easy for the serviceman if he wants to vote to be able to apply for his military or absentee ballot by mail. If the voting officers had to hand deliver the applications, and not merely make the applications available upon request, it would not create an insurmountable program for their positions nor a problem to achieve in practicality. Perfection is not the criterion. Delivery would not have to be made to an isolated post 8,000 miles from civilization, but delivery would have to be made where humanly possible, feasible, and practicable.

The present Federal voting assistance law repealed all previous laws and became effective as Public Law 296 on August 9, 1955. Its first real impact was in 1956, a presidential election year. The Federal Coordinator under the Federal Voting Assistance Act estimated for us at that time, and we so reported to the Legislature of the State of New York, that in 1956 "those eligible to vote in the 1956 election from the State of New York was 249,000." Only 52,649 military voters applied for military ballots in New York that year. It was gloomy to compare this with the results of 1952 where

with "in hand" delivery, we received 84,547 applications from an estimated 215,000 servicemen eligible to participate.

In the annual report made by the directors of the division for servicemen's voting on January 10, 1957, we said at page 68 of Legislative Document No. 103 (1957):

"It is impossible for the directors to reach all of these members of the Armed Forces and their spouses and dependents and furnish them with the New York State form of post card application for military ballots. Thus it became extremely important to have a wide distribution of the Federal post card applications made to the residents of the State of New York. In those years when 'in hand' distribution of Federal post card applications was made, the Federal post card applications constituted about 90 percent of all applications received. In the 1956 election, however, only about 65 percent to 70 percent of all applications received were on the Federal post card application forms. The balance were received either on the post card form furnished by the Division or in letters or other forms of applications which were acceptable."

In our annual report on January 13, 1958, we again stated:

"There was one material and radical change made in the new Federal Voting Assistance Act. It eliminated the distribution of these post card applications during years when Federal officers were to be voted for. As a matter of fact, the distribution of post card applications 'in hand' to all members of the Armed Forces was done away with entirely.

"This change has greatly militated against the use of the Federal post card form of application and this became very apparent during the 1957 election. From time to time a check was made of applications received from servicemen and it was ascertained that less than 10 percent of those applying for a military ballot used the Federal post card form."

We have reviewed the facts insofar as they relate to the State of New York. We deem it important to accentuate the difference between the "availability" of applications at a post, camp, base, installation or station and the "in hand" delivery of applications at these places. Indubitably, more servicemen will participate in the elections if every effort is made to facilitate their getting their voting applications. This has nothing to do with their eligibility. Each State has the sovereign right to determine the qualifications of their voters. If, however, a serviceman is eligible to vote and wants to vote, we should do everything within our power and scope to make it easy for him to do so.

I strongly urge your support of the Kelly amendment to the 1955 Federal Voting Assistance Act. I strongly urge its passage in time for use at the 1960 presidential elections.

Thank you for the privilege of appearing before your body.

Good Business

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 30, 1960

Mr. IRWIN. Mr. Speaker, the President's Committee on Employment of the Physically Handicapped recently presented a meritorious service citation to the Pan American World Airways, which now employs more than 500 handicapped persons. The company has provided leadership in this nationwide program and moreover is furnishing distinct evidence that hiring of the handicapped is good business. I have long supported programs advocating this principle and am gratified to see that recognition is being made in instances where businesses have put the principle to practice. I am pleased that a constituent of mine, Mr. John S. Woodbridge, of Darien, Conn., the comptroller of Pan American, who has done much to further the company's program of hiring handicapped persons, was chosen to accept the citation on behalf of the company, and under permission previously granted include Mr. Woodbridge's remarks in accepting the citation. The remarks:

REMARKS OF JOHN S. WOODBRIDGE, COMPTROLLER, PAN AMERICAN WORLD AIRWAYS

In receiving this citation from your noble organization, with heartfelt thanks, I want to leave a militant message for those of you who are employers and prospective employers of people, a message which I trust will be widely disseminated and actively productive.

In general, a disabled person makes a good employee, and frequently a superior employee. Nature has a way of compensating structural failure with additional mental ability. Further, these employees generally are steady workers, not given to frequent change of job but desirous of continuity of employ.

Employment of the disabled is thus not a one-way street, beneficial only to the employee, but is also valuable to those employers who have become aware of this excellent source of talent.

When this refreshing concept is augmented by programs for supplying the disabled employees with incentives for living and for disregard of their afflictions, the divine sparks of hope and joy of living can be rekindled within those in despair, resulting in a truly practical contribution to our country, the finest of all, the United States of America.

Baltimore Milk Market Order 127

EXTENSION OF REMARKS
OF
HON. THOMAS F. JOHNSON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 30, 1960

Mr. JOHNSON of Maryland. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Mr. Max Chambers, editor and publisher of Maryland's foremost farm newspaper, News and Farmer of Preston, Md.:

Last Wednesday and Thursday the courthouse at Cambridge, loaned for what was expected to be a USDA quasi-judicial hearing, turned out to be no hearing at all, but a shocking example of what government power has done to us.

The "hearing" was requested by Eastern Shore independent dairymen and farmers so they might try to prove that the Eastern Shore should be taken out of the Baltimore Milk Market Order No. 127.

Refused to be heard. What a travesty on the intelligence of the people of the Eastern Shore or any other part of the United States. The county courthouse since the founding of the 13 colonies has been the meeting place for the discussion of public questions. Here and now on the Eastern Shore in Dorchester County, a public and personal question can't be discussed because a Benson "dairy dynasty" bureaucrat and examiner say "No. Little chimney—heated hot."

Following 1½ days of effort, counsel for independent milk producers and bottlers requested the U.S. Department of Agriculture to recess the "hearing."

Counsel, for Mills Dairy, Shiloh Dairy, Twilley Dairy, and a number of independent farmers in adjoining counties, very ably at the outset set forth what they planned to present as new evidence and that they proposed to prove that the Eastern Shore should be taken out of the Baltimore Federal Milk Order No. 127.

Milk orders were originally set up to protect farmers' prices on raw milk. Today Baltimore milkmen have frankly said that the 127 Milk Order controls the retail price of milk (where the milk is sold) not where it is produced.

At considerable expense counsel for the dedendants brought together some 50 witnesses to try to convince the USDA that the 127 order is not needed, not wanted, and that farmers will get less money for their milk, consumers will pay more, independent dairymen (bottlers) will be put out of business and the economy of the Shore will be impaired. This $15 million business received no consideration of its viewpoint.

This is the general history of most milk orders. The Eastern Shore isn't the only place suffering from USDA "Dairy Dynasty" pressure. Iowa and several other States are hard hit.

The House Agriculture Committee Milk Order hearings in Washington May 18–20 of this year brought out some startling evidence. And it is heard that there is more to come.

But now the Eastern Shore has a real economic problem. The Governor and his Economic Development Commission might carefully look into this one. Politicians, except Congressman JOHNSON have not been "on the ball" on this local farm problem.

It should be made clear that the USDA "jumped the gun" and hauled five bottlers into Federal court before they had an opportunity to get the 15A petition hearing, which they have been asking for, to prove they should not be under the Baltimore Order No. 127.

They say the USDA is dead wrong when it tries to put any man in jail before giving that man a full and fair hearing on its own Department rules. Eastern Shore men say they haven't had a fair hearing and that the USDA is trying to force them to comply with its order or put them in jail before giving them a fair hearing.

Where is the justice in a case when a man is tried for not complying with an order before he has a chance to try to prove he should not have to comply with it in the first place?

Eighteen witnesses were put on the stand but not one was allowed to give any testimony. The only way counsel for the Shoremen, James K. Knudsen and Ben Melnicoff, could get any testimony into the record was by counsel saying what the witness would have said by proffer.

The Examiner said counsel could only show that findings of the Secretary in issuing the order were illegal. New evidence has come up since the order was promulgated, but counsel was not allowed to present it.

The attorney for the USDA, Joseph A. Walsh, consistently objected to every ques-

tion and procedure and was consistently sustained by the Examiner, who compared himself to a judge in a court of law, but did state that he was an Examiner under USDA administrative law.

The entire 1½ days were tense with both lawyers for the defendants and the Examiner speaking loudly and pounding on bench and table. At lunch time the Examiner was berated by several persons involved in the so-called hearing. In fact there was so much uneasiness in the court house that the Cambridge city police officers felt it necessary to be present prior to the lunch hour on the second day and remain until the hearing was recessed.

Attorneys for the local petitioners saw they were getting nowhere and requested that the petition be referred back to the Secretary of Agriculture or to the Chief USDA Judicial Officer. The Examiner refused and indicated that he was hearing the case and whatever recommendation he made would most likely stand.

He consistently said he would not listen to any testimony other than arguments on the testimony given the original hearings on the Federal milk order in Baltimore about 2 years ago. He said that it was a waste of time.

Even a life-term murderer can get a new hearing on new evidence! There are a number of instances throughout the United States where men have been proven innocent and released—and paid for time served.

Yet, businessmen and farmers on the Eastern Shore of Maryland, after 8 months of asking, cannot get a fair and full hearing before the Department of Agriculture—not a commentary on the democratic system.

The whole mess at Cambridge is a sad commentary on the Democratic system.

It's a shame that more thinking Eastern Shore men could not have been present and seen this performance which dairy farmers present were in no mood to experience.

Could it be that this case at Cambridge would have its counterpart in Ralph Waldo Emerson's immortal "Concord Hymn", sung April 19, 1836, at the Minute Man Monument?

"By the rude bridge that arched the flood,
Their flag to April's breeze unfurled,
Here once the embattled farmers stood,
And fired the shot heard round the world!"

Message to the Ukrainian Congress Committee of America on Its 20th Anniversary

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 30, 1960

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following message to the Ukrainian Congress Committee of America on the occasion of its 20th anniversary:

MESSAGE TO THE UKRAINIAN CONGRESS COMMITTEE OF AMERICA ON ITS 20TH ANNIVERSARY

Tyranny has never been a stranger to the courageous people of the Ukraine. Long has it been their lot to be the victims of expanding empires, and to suffer at the blood-drenched hands of the invader.

The Ukraine has particularly fared ill at the hands of Russian imperialism. Though claiming to have cast aside the tenets of prior Russian expansionism and though picturing itself as the new savior of the masses, the Soviet Union became the most vicious oppressor in the long and hard fought saga of the Ukraine. Within 5 years after it had taken power the Soviet Union realized that a major stumbling block to her plans for world conquest lay in the nationalist strivings of the Ukraine. Repression of Ukraine culture, massacres of innocents, mass deportations to Siberia—all have been used to consolidate the power of the U.S.S.R. over the Ukraine.

In the past the Ukraine has always emerged triumphant with her enemy destroyed. Years might have passed but victory in each case was ultimately and gloriously hers. Yet in the periods of arduous waiting, years of fearing the every knock on the door, years of starvation and persecution, hope remained alive. It had to if ever the Ukrainian people were to become free again.

It is such an organization as the Ukrainian Congress Committee of American which provides the captive nations with this potent weapon against the Communist aggressor. The committee goes even further for it realizes that hope alone cannot defeat a historic imperialism and a modern totalitarianism. That is why the program of the committee, its splendid publications, and the unflagging efforts of its membership of two and one half million are all fulfilling a highly commendable and active service to America, to the free world and to the enslaved multitudes under the Soviet heel. That is why, on behalf of the millions in the dozen captive nations and on behalf of America I wish to congratulate and to thank the Ukrainian Congress Committee of America on its 20th anniversary.

Radio and Television Programing

EXTENSION OF REMARKS
OF
HON. ROBERT N. GIAIMO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 30, 1960

Mr. GIAIMO. Mr. Speaker, the concern of our Nation with the uses being made of radio and television has been reflected many times in discussions conducted on this floor. I know that our citizens recognize the fine work of this Congress to insure that the vast resources of the radio and television media would be used constructively.

Last fall, I was among many who spoke out against the indifference to the public interest revealed in certain TV and radio practices. At that time I urged the listening and viewing public in my Connecticut community to insist upon an improvement of radio and television programing.

Mr. Speaker, I believe we should continue our concern with our national, educational, and entertainment media; I believe citizens should expect that the great power of the airwaves be used in behalf of the public good. I believe that this concern should be expressed not only by criticism of what is bad but also acclaim for what is praiseworthy.

In this regard, Mr. Speaker, I wish to call the attention of the House to a unique program being developed by the national broadcasting system. Recognizing the urgent need for widespread public participation in defining America's national goals and purposes, the National Broadcasting Co. will begin a weekly television series this fall that will deal with vital current issues through live discussions and debates. The program, entitled, "The Nation's Future," will premiere on November 12.

As a Representative from the State of Connecticut where the town meeting still flourishes in many communities, I am particularly pleased with the unique approach which this program will make to subjects of pressing concern to each citizen and to the Nation. These discussions will be led by statesmen in public life, including world leaders, Members of Congress, ambassadors, economists, and idealists, as well as leaders from management and labor. Recognizing that every citizen has a personal stake in these issues the National Broadcasting Co. will arrange for these programs to be integrated with local activities so as to stimulate discussions in local, civic, fraternal and educational groups. Research and study material will be sent to these groups in advance of each weekly program. The National Broadcasting Co. will also arrange and organize the participation of the air of representatives of these local groups. Through the cooperation of the National Broadcasting Co. affiliates in each area, the Nation's future will give countrywide scope to our traditional town meeting system.

Mr. Speaker, I feel that the National Broadcasting Co. is to be highly commended for its efforts in originating a program of such vital national importance which will give our people an opportunity to reexamine their ideals and aspirations and utilize the facts for making informed opinions and judgment. I know that the Nation's future will generate a deeper conscience of the American way of life and the values of democracy and freedom as well as the importance of safeguarding these values not only in our country but the world over.

This is television programing at its best. This is the kind of programing America needs, and I am certain the success of the Nation's future will prove it is what America wants.

A Cuban on Cuba

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to call to the attention of the House the following which appeared as a letter to the editor of the Christian Science Monitor. Since this letter was written by a Cuban, I believe it is especially significant and would recommend its careful study by all Members of this body.

The letter follows:

A CUBAN ON CUBA

To the CHRISTIAN SCIENCE MONITOR:

Please allow me to congratulate you on your editorial of June 9, "Cuba: Restraint But Not Inaction."

It is certainly encouraging to realize the importance your newspaper gives to the tremendous menace a Communist regime in Cuba offers not only to the United States but to all the Latin American countries. However, your answers to your own question, What can be done (about this serious danger to our democracies)? fall short of the right solution.

Have you, or the American people stopped to consider what would happen if Cuba and Russia sign a mutual security treaty? And you can bet that this is in the making. Perhaps some naïve people believe such a treaty will provide the right "excuse" for the United States to use the Monroe Doctrine, which would permit an American intervention in Cuban affairs. However, they better think twice about the consequences of such action after a Russian-Cuban agreement has been signed. There will be no way to break it up, except by risking a third world war.

Let us not forget Russia's grip on Hungary, Poland, and the rest of the Soviet satellite countries. What would happen if we try to liberate any of these countries? The same goes for Cuba after it has signed a security pact with Russia.

Cuba, as a new "Socialist State of the People" will be the trampoline from which a more direct Communist infiltration in Latin America will bounce off. Russian planes and submarines will be watching our shores, waiting for the right moment to act. Ballistic missiles will not be hard to set up, and at only 90 miles from us. And, worst of all, democratic governments in Latin America will fall one after the other. The end, then, is obvious.

It is because of the above-mentioned premises that the United States must act now, before it is too late.

Among the things, the United States should do, as of now, the following are paramount:

1. Break off diplomatic relations with Castro's government. (The rest of Latin America will follow because they know that in this struggle between democracy and communism there is no middle ground, and they know their place is with the United States. After all, for less reasons Colombia has broken up diplomatic relations with the Dominican Republic; and Guatemala with Cuba; and many a Latin American country has broken up diplomatic relations with another Latin American nation for practically no reason.)

2. After this initial step, all Cuban delegations and consulates, and 26 of July Clubs in the United States will have to pack up and take their Communist propaganda with them. This, at least, will stop men such as the director of La Gaceta—a Spanish newspaper published in Tampa—from saying that the President of Cuba is not a Communist, when it is well known by all of us (Cubans) that the President of Cuba ran for Representative to the Lower Chamber of Cienfuegos (Cuba) in the Communist Party in the elections of 1944; and that he was an officer of the Communist Party's local committee of said city of Cienfuegos during 1940–44; and that he was personal secretary of Juan Marinello, No. 1 Communist of Cuba for more than 30 years.

3. It will be very easy then (for the United States) to cut off the tremendous subsidy paid to Cuba's sugar industry, which will be forced to sell its sugar to Russia at the price they are so proud to brag about, little over 2 cents a pound. Certainly, the Cuban people will suffer. But they stand to suffer 10 times more under the Communist regime of Castro.

Then, let Castro bring petroleum from Russia—after the three American and English refining companies have finally pulled out, even if, they lose millions of dollars (they are going to lose them anyhow). Eventually, a new and democratic government will take over in Cuba. And with it, and with the rest of the democratic governments of Latin America, the United States can go back to its job of closing the gap between its tremendous high standard of living and the tremendous low standard of living of most, if not all, of the Latin American countries.

RAFAEL LECUONA.

TALLAHASSEE, FLA.

Address by Hon. Francis E. Walter Before the Texas Department of the American Legion

---

EXTENSION OF REMARKS
OF
HON. JOE M. KILGORE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 30, 1960

Mr. KILGORE. Mr. Speaker, recently our colleague, the Honorable FRANCIS E. WALTER, addressed the Texas Department of the American Legion on the occasion of its annual convention in Dallas, Tex.

I obtained a copy of Mr. WALTER'S speech and read it with great interest. It is so timely and so cogent that I know many others will want to read it.

The speech follows:

ADDRESS BY CONGRESSMAN FRANCIS E. WALTER, DEMOCRAT, OF PENNSYLVANIA, CHAIRMAN, COMMITTEE ON UN-AMERICAN ACTIVITIES, U.S. HOUSE OF REPRESENTATIVES, TEXAS DEPARTMENT, THE AMERICAN LEGION, DALLAS, TEX., AUGUST 12, 1960

In glancing at the correspondence which I had with Commander Peters in response to the invitation to speak to this convention, I noticed that I addressed him as "Dear Comrade." To those of us in the Legion, this salutation has special significance, because as comrades in arms we have shared common dangers and as Legionnaires we are dedicated to common objectives.

How curious it is that even this salutation "Comrade" has been appropriated and perverted by our Communist enemy who debauches language itself.

Masquerading behind a facade of peace, they have brought to this planet total warfare, in which every weapon—military, psychological, diplomatic, political, and economic—is employed.

In the name of freedom they have imposed slavery on one-third of the people of this globe. Under the banner of humanitarianism they have brought more suffering and human misery than any force since the dawn of time. Under the guise of the more abundant life, they have reaped a harvest of death and destruction— and the end is not in sight.

That in the course of 50 years a devilish conspiracy should evolve and should gain such momentum as to encircle the globe with its tentacles, is sobering indeed. That this conspiracy should pretend to be Messianic in intent and purpose is diabolical, but comprehensible.

What is incomprehensible, however, is that notwithstanding their publicly announced program of world domination and the plain, obvious record which they write in human blood, even now they continue to dupe those whom they would destroy. Even those who have faced them in mortal combat on the field of battle are among the victims of their deceit.

A 5-year study made by a special committee selected by the Secretary of Defense, of the conduct of American prisoners of war during the Korean conflict reveals that one out of every three American prisoners of war collaborated with the Communists. Their collaboration included signing Communist appeals, participation in Communist propaganda broadcasts, and writing articles commending communism and life under communism. Seventy-five American prisoners of war committed themselves to become Communist spies against the United States. Almost two dozen agreed to relinquish all ties with this country and to remain in Communist China. The report of this special committee also reveals unprecedented breakdown in the morale of the American prisoners of war, including fraternization with the enemy.

I brought with me to this convention motion picture films depicting the Communist-led student riots during the recent hearings of the committee in San Francisco. That these riots were the results of Communist infiltration is clearly demonstrated, not only by the films, but by the factual material contained in a report made to our committee by the FBI, which we just published and which confirms beyond a shadow of a doubt that these student riots were inspired and directed by trained Communist agents. In the words of J. Edgar Hoover, "The Communist success in San Francisco in May 1960 proves that it can happen here."

How do we account for the sordid disclosures contained in the report on the conduct of American prisoners of war during the Korean conflict? What interpretation is to be made of the fact that a great many students here on American soil defied lawful authority and openly rioted against a duly constituted committee of the U.S. Congress?

In attempting to assess the reasons for the conduct of the Americans who betrayed their cause during the Korean conflict, the special committee appointed by the Secretary of Defense states:

"When plunged into a Communist indoctrination mill, the average American POW was under a serious handicap. Enemy political officers forced him to read Marxian literature. He was compelled to participate in debates. He had to tell what he knew about American politics and American history. And many times the Chinese or Korean instructors knew more about these subjects than he did. This brainstorming caught many American prisoners off guard. To most of them it came as a complete surprise and they were unprepared. Lectures, study groups, discussion groups, a blizzard of propaganda, and hurricanes of violent oratory were all a part of the enemy technique.

"Ignorance lay behind much of this trouble. A great many servicemen were teenagers. At home they had thought of politics as dry editorials or uninteresting speeches, dull as ditchwater. They were unprepared to give the commissars an argument.

"Some of the POW's—among them men who became defectors—had heard of communism only as a name. Many had never before heard of Karl Marx. And here was communism held up as the salvation of the world and Marx as mankind's benefactor.

"The committee heard evidence which revealed that many of the POW's knew too little about the United States and its ideals

and traditions. So the Chinese indoctrinators had the advantage.

"The uninformed POW's were up against it. They couldn't answer arguments in favor of communism with arguments in favor of Americanism, because they knew very little about their America."

And what of the large number of students who engaged in the San Francisco riots? Shortly after the publication of the FBI report in which appears the identification of trained Communist agitators and the techniques which they employed in agitating to action the students who were engaged in the riots, a number of the rioting students joined in the issuance of a public statement denying any cognizance that they had been led by Communists.

The fact is that of those who participated in the riots in San Francisco not more than a dozen were Communists, but they were trained in the techniques of incitement to riot. They spent weeks in laying the groundwork. They knew they had material to work with which had been conditioned by clever propaganda. They were organized for action and at the proper time they pulled the switch and then lurked in the background while the students did their dirty work.

One month before the Communist-led student riots in San Francisco, we read of riots in Korea in which large numbers of students joined mobs led by Communist agitators to force the abdication of a stanch anti-Communist regime. At about the same time, an estimated 100,000 British young people jammed London's Trafalgar Square in a Communist-oriented "ban the bomb" rally.

Within days after the San Francisco student riots, we read of a Communist-led student rally of 20,000 in Bologna, Italy, to protest U.S. bases there, and we read of similar rioting student demonstrations in Indonesia, in Laos and Brazil. A few weeks later, the proposed visit of the President of the United States to Japan was canceled as a result of demonstrations by hundreds of thousands spearheaded by Communist-led students.

I surmise that in each of these riots—as in all Communist enterprises—only a handful of Communist agents who knew their business as agitators were directly responsible for the demonstrations of the multitudes.

This brings us to consideration of one of the dangerous fallacies which many people entertain in attempting to appraise and evaluate the threat of communism. It is often said by people of unquestioned patriotism and of good faith that we in the United States have little to fear from communism or from Communists because they are counted only in the thousands in a population of 180 million.

Time and time again the Committee on Un-American Activities has pointed out that the strength of the Communist movement in any of its ramifications bears little relationship to the number of its members; that instead, its strength and effectiveness are in direct ratio to the intensity of the efforts of the few who are trained and disciplined agents. It was with only a relative few that Lenin seized control of the government of Soviet Russia. Even today only 3 or 4 percent of the captive nations are Communists. It is estimated that of the 33 million Communists in the world today probably not more than 10 percent, some 3 million, are the hard-core trained zealots and yet these 3 million control absolutely 900 million and are masters of the world conspiracy which has tentacles on every continent of the globe. To attempt to appraise the strength of the Communist movement in terms of numbers, then, is like appraising the threat of cancer to the human body by comparing the size of the cancer with the rest of the body which is sound.

Permit me to dwell briefly on one phase of Communist subversion which is illustrated by the student riots which demonstrate the power of a few trained agents, namely, Communist infiltration of youth. At the outset, let me say that the overwhelming majority of the young people of this Nation are of unquestioned patriotism and dedication to all that is good and noble in our society. But this most not beguile us into feeling that the threat from Communist infiltrators among our youth is insignificant. The fact is that today the Communist conspiracy has given a top priority to infiltration and subversion of youth over the world and is right now concentrating on its program of subversion of the youth of the United States.

Here is a resolution passed last year at the national convention of the Communist Party:

"The national committee within a period of no more than 30 days after the adjournment of this convention, shall appoint a full-time director of youth affairs and establish a functioning national commission on youth affairs composed of youth and adult members. This commission, amongst other things, shall issue a regular national party youth bulletin. We urge that in a brief period of time those State committees which have not done so, shall establish political and organizational responsibility for youth affairs."

About a year ago the Committee on Un-American Activities began a series of hearings on Communist activities and propaganda among youth groups. Let me recite to you some of the factual material developed in these hearings.

Officials of the U.S. Bureau of Customs of the U.S. Treasury Department displayed to the committee samples of typical Communist propaganda periodicals published abroad and sent into the United States destined to student groups in schools and colleges. These officials testified that every school and college in the United States is directly or indirectly the recipient of some of these Communist propaganda publications. A spot check of Communist propaganda destined to schools and colleges in this country was made at New Orleans which is one of the lesser ports of entry of approximately 40 ports through which Communist propaganda is entering the country. The result of the spot check made at New Orleans showed that at least 300,000 packages of Communist propaganda destined to schools and colleges in the United States were processed there during a 12-month period and that from 5 to 15 separate publications were contained in each package.

This propaganda emanates from two major international Communist-controlled youth organizations, the World Federation of Democratic Youth, and the International Union of Students. These organizations publish at least 40 different periodicals which are disseminated regularly in schools and colleges over the world, including the United States. None of these publications bears labeling as Communist propaganda, however, in accordance with the requirements of the Foreign Agents Registration Act.

In the United States, tied in with each of these two major international Communist-controlled youth organizations are student groups which, wittingly or unwittingly, are conduits for Communist poison.

Running parallel with this Communist operation there are now infiltrating among youth groups, trained Communist agents under the immediate direction of Hyman Lumer, educational director of the Communist Party. These Communist agents, who are masters of perversion, attempt to turn the legitimate concern of our young people for peace, freedom, civil liberties and the whole area of humanitarianism into an acceptance of the Communist program which is served up under false labels. At the same time, with diabolical cleverness, these Communist agents arouse student groups into an attack against law enforcement agencies of the Government which are portrayed as instruments of oppression.

And let me say, that in this program of Communist subversion, the plain fact is that Communist agents are frequently assisted by the professors in the classrooms. And the American Association of University Professors has a consistent record of censorship against schools and colleges which fire Communist instructors.

"Wait * * * I refuse to accept an award from an organization I cannot respect." So said young Stephen Bayne recently in refusing an American Legion Post citizen award. Those of us who are constantly engaged in surveying the operations of the Communist conspiracy and the impact which this monolithic force has on all segments of our society were not shocked at this statement, because the brainwashing technique of the Communists has not been confined to prisoners of war or to the leading of students in rioting. I dare suggest that the statement by young Bayne is only a symptom of a disease which results from a deliberate infection.

We are today concerned about building more schoolrooms with better equipment for training our youth, but our curricula are almost void of training regarding the machinations and operations of the world force which threatens freedom everywhere. I have frequently observed that the most appalling fact of our time is our own ignorance respecting the Communist menace and we are beginning to reap the harvest of our ignorance.

The American Legion is to be commended on its "Back to God" program which emphasizes basic beliefs in the Divine and in spiriutal values. But this is only a start. If the forces of freedom are to survive on this globe, we need desperately to inculcate in our youth the virtues of patriotism and a recognition simply that treason is wrong. We need to reemphasize the sources of strength of our own free society and then we need to present to our youth a critical study of communism, its ideology, philosophy and communism in action. This analytical study of communism which I suggest must not, of course, be confused with advocacy of Communist doctrine. In other words, I am suggesting study of communism in the same manner that the criminologist studies crime—not for the purpose of emulating the criminals, but in order to cope with crime.

The Committee on Un-American Activities and your own Americanism Commission of the Legion, as well as other non-governmental patriotic organizations are constantly publishing authoritative reports and other documentation which are excellent source material.

This program which I have outlined might well be a pilot project to be undertaken by the American Legion of Texas, to urge and assist every school and college in this State to equip its students to cope with the greatest challenge in history—a challenge which we shall either meet or perish.

Christ and Politics

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Tuesday, August 30, 1960

Mr. MAGNUSON. Mr. President, as we move toward adjournment, the fall campaign and election in November, I re-

call the Lutheran Hour broadcast of July 10, 1960.

The speaker was the Reverend Lambert Brose, known to many Members of both the Senate and House, because of his work with the Armed Services Commission of the Lutheran Church, Missouri Synod.

Because Lambert Brose's message is as timely now as when it first was delivered, and will be as timely in November, when our people will cast their ballots, I ask unanimous consent that his address be printed at this point in the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CHRIST AND POLITICS

(By Lambert Brose)

"What do you thing about the Connally amendment?" I asked that question of six of my friends recently.

Five of them looked at me dubiously and either asked, "What's the Connally amendment?" or quickly changed the subject. Only one stopped to discuss the matter—and he was a political columnist.

From now until November people will be interested in the presidential election campaign. They will be interested in how sincere the candidates' voices sound, or whether or not they "look like a President should." And there will be great interest on the part of certain groups in issues that will affect them very obviously, health insurance for those over 65, for example. But, judging from the past, most people will probably not know much more about the issues in general than did my friends about the Connally amendment.

And, in those years when we do not have a presidential election, the political ignorance of most citizens is appalling.

Is this too pessimistic an appraisal? Let me point out that these people I asked about the Connally amendment were all very active members of Christian churches. When one realizes how much the successful functioning of our democratic form of government depends on an informed citizenry, it's appalling when any considerable number of citizens are ignorant of political issues. But when church people—whose religion teaches them to be good citizens, and all that that implies—are that way, it's disturbing indeed.

A Washington clergyman once made a statement in this connection which sounds a little shocking, at first. He said: "Anyone who isn't interested in politics isn't much of a Christian." But when you think about it, there's a lot of truth to it. Politics affects almost every area of a Christian's life—first, in his role simply as a citizen. The food he eats, for example. You wouldn't think there would be much politics involved in that. However, millions of votes this November may hinge on how much—or how little, if any—the presidential candidates say the Government ought to guarantee farmers for the food they grow.

Or the air we breathe. And think of the politics involved in passing antismog and other antiair pollution laws.

I doubt that you can think of a single day-to-day activity of a Christian that isn't vitally affected by politics.

However, it is the religious motivation for a Christian's participation in politics that we would like to stress in this message on "Christ and Politics."

Christ's great mission is not, obviously, a political one. That is clear to us today. But when He walked upon this earth as the God-man, He had to tell the people that again and again. They were looking for a political messiah who would lead them in a political revolution against the Roman Government. Jesus had to tell them forcefully that His Kingdom was not of this world.

Christ came into the world to live, suffer, and die so that men might have forgiveness of sins; that, believing in Him, they might live eternally in heaven. He came to seek souls. His interest in politics was purely a subordinate one. But it was there. And it is important.

Jesus was interested in politics because it is political government which can make this world a more orderly place in which to live—so that the all-important work of preaching the Gospel, of preparing men for lasting life, might be hindered as little as possible.

Christ, as true God, ordained that order in the world should be maintained by government. He did not ordain what form government should take. That—and seeing to it that whatever form of government we choose is as efficient and good as we can make it—that is what Christ expects of His followers. And that we do through our participation in politics.

Let's see how this ought to work out in our lives today. The Savior has told us that our great mission in life is to "preach the Gospel to every creature." There is no mention here of politics. But the implication that Christ's followers are to participate in politics is here, nevertheless. Because, in order to preach the Gospel as efficiently as possible, we must try to clear away all obstacles that are barriers to preaching the Gospel.

War—for example. War, on balance, is certainly a hindrance to worldwide missions work. A Christian wants to do everything he can to do away with war, individually and through his church. But think how much more effective it is when the entire machinery of his government is set in motion for peace—peace which will further conditions favorable to teaching men about eternal life. Consequently, a Christian assuredly has the responsibility of doing all he can politically to influence his government toward working for peace. Not a cowardly peace which would allow godless communism to take over the world bit by bit, destroying men's souls as well as their bodies, but a just peace.

Or take the problem of world hunger. It is often said that three out of every five people in the world go to bed hungry every single night of their lives. A Christian wants to help these people out of sheer humanitarian impulses, of course. "For God so loved the world," says the Bible. That includes men's bodies. But a Christian has a far higher purpose for feeding the hungry than merely to give them bodily comfort—just as God has a far higher purpose. The Christian says: "It's hard for a man to listen to the Gospel of Jesus Christ when his empty stomach cries out so loud he doesn't hear the preaching." Hunger stands in the way of teaching a man about the salvation of his soul.

A Christian wants to do all he can to allay the world's hunger through secular agencies, through his church. But again, think how much more effective it is, how infinitely greater the number of people who can be reached when our Government throws open its huge granaries of surplus grains to feed the world's hungry. There are perplexing problems involved, of course—such as the danger of upsetting the world grain markets. But that's where a Christian's political responsibility comes in. He is to do the hard work of studying this subject in the light of the complex problems involved, and then seek to influence his government—through his representatives in Washington, through his vote—to do what he thinks best to clear away this obstacle to the preaching of the Gospel.

When a Christian realizes how extremely important political action can be in making the world a better place to live—not only for a safer, more pleasant life on earth, but especially in facilitating the work of preparing people for life in eternity—then he assuredly will want to undertake the hard work of participating in politics.

Then he'll be willing to take on the hard work, first, of informing himself on political issues. It is hard work. It takes a great deal of willpower to break habits of years standing—the habit, for example, of skipping the editorial page in order to get to Li'l Abner, or Dear Abby, or the sports pages as quickly as possible.

Then he'll want to take on the hard work of trying to be informed on both sides of the issues. Almost everyone, I suppose, wants to be known as an "openminded" person. But it's very difficult. I wonder how many listening right now make the effort, for example, of reading a daily paper expressing a political viewpoint that's different from the paper they usually read.

Most important, a Christian then will want to vote—not only in national, but in State and local elections. After all, it is you and I—the citizens of this Nation—who, in the long run, govern this country, through our votes. A democratic form of government functions successfully only when its citizens function successfully—by voting intelligently.

Yes, a Christian, feeling that God has given him certain special gifts and abilities, may decide that it is his responsibility to run for public office. The results of a recent survey show that 73 percent of American parents interviewed do not want their children to run for political office, mostly because they think that politics are dirty. When you realize how much our system depends upon good men in government, that's a frightening situation. Of course there's dirt and graft and corruption in politics, just as there is in business, and unions, and in any human endeavor. A Christian's job is to do what he can to clean up the dirt—wherever he finds it—including in political life. "Evil triumphs when good men fail to speak," said Burke.

As we said in the interview before, a Christian can be a tremendous influence in politics. In his own family, by informing himself on the issues and voting responsibly; in his community; and the higher he goes, the more influence he can exert. Sure, I've heard the old cliche that the last word in every politician's speech is "God." Undoubtedly religion is used as a cloak of hypocrisy by many a politician, just as it is by many a businessman, union leader, farmer, or professional man. But when a Christian politician really lives his Christianity, he can be a powerful leaven in the affairs of men.

There is one other matter—and it is the most important—that I would like to call to your attention in connection with this subject, "Christ and Politics." The activities mentioned so far can be engaged in by any qualified citizen, Christian or non-Christian. But one thing only the follower of Jesus Christ can do. Only he can pray to Christ, the almighty God, who has the power to change human hearts.

When the Holy Spirit enters a man's heart through the Scriptures, and gives him faith that Jesus Christ, by His sacrifice on Calvary's cross, has forgiven his sins—when a man really believes this—his whole life is changed. Out of love to his Saviour he tries to lead a better life in every area of his activity, including his political activity. And the more the gospel is preached, the more human lives it changes, the stronger the family, the community, the Nation become.

What an incentive this is for us in this day of widespread juvenile delinquency, of admittedly low moral standards on every level of society, in the age of the payola. No matter how gloomy things seem to be, a

Christian is an optimist. He has hope. He is assured that the Gospel "is the power of God unto salvation to every one that believeth." Nothing can stand against the Gospel of Jesus Christ when it is loosed upon human hearts. Not even the gates of hell shall prevail against it.

So let us pray. Let us pray frequently and fervently that this Gospel may come into the hearts of more and more men and women. Let us pray that God will help us as—with that goal in mind—we try to do our part in helping run our Government through a wholehearted participation in its political life. We ask it in the name of Jesus Christ, our Saviour. Amen.

Tribute to Hon. Paul Brown

SPEECH
OF
HON. WILBUR D. MILLS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. MILLS. Mr. Speaker, it was with keen disappointment and regret that I learned of the intention of our beloved and esteemed colleague, the Honorable PAUL BROWN, to retire after the close of this session of Congress.

It is needless for me to say that his warm friendship, his advice and counsel and his wisdom and judgment after his 27 years of dedicated service to his Nation, his State, and district will be sorely missed by all of us. His legislative accomplishments are many; his friends here and throughout the Nation are legion; his loyalty, his integrity and his high statesmanship are matters of public record.

I was especially fortunate when I first came to the Congress on January 3, 1939, in being assigned to the Banking and Currency Committee of the House on which PAUL BROWN was then a high-ranking Democratic member. Thus, as a new Member I became the recipient of his wise advice and counsel and the kindness and consideration which he extended to all new Members of this great body. It was my good fortune to serve with him in the Banking and Currency Committee until nearly the end of 1942 when I became a member of the Committee on Ways and Means. I am thus aware of the great contributions which he made to Federal housing and Federal banking laws and to the many other projects within the particular jurisdiction of the committee on which he served for such a long time.

I join with other Members of the House who have paid tribute to the diligent, conscientious, and forthright manner in which PAUL BROWN always tended to his duties here on the floor and placed himself on record on the many issues which came before the Congress during his 27 years of service here. Probably no Member of the House of Representatives has a higher record of attendance and of recorded yea-and-nay votes on legislative issues which have transpired.

May I extend to you, PAUL, and to your family, my very best and most sincere wishes for a well-earned and highly deserved period of relaxation from the incessant and heavy legislative duties which you have handled for so long and in such a faithful manner.

Every Vote Counts

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, August 30, 1960

Mr. WILEY. Mr. President, earlier this year, I introduced a resolution to establish a National Voters Day. The purpose of the resolution would be to increase voter participation in elections—now at a deplorably low level.

As we recall, the measure, Senate Joint Resolution 186, was passed by the Senate earlier this session.

However, the House of Representatives has not yet taken action on it.

Again and again, I have contacted the House Judiciary Committee urging that this matter be given favorable consideration. Although I know time is getting short, I sincerely hope that this can still be done prior to adjournment.

I well recognize, of course, that the mere designation of a special day cannot do the whole job of increasing votership. However, a major underlying purpose is to focus attention on the necessity of voting, and to encourage special efforts in this direction.

I am deeply gratified, too, by the fact that across the Nation, a great many efforts—by labor, management, civic-minded organizations, and others—are being made to encourage more people to become knowledgeable on the basic issues and the candidates in the election, and to exercise their precious heritage of voting.

As a fine example of the kind of encouragement being given, I ask unanimous consent to have an article by Joseph J. Delaney, general president of the International Operating Engineers entitled "Every Vote Counts"—published in a recent edition of the International Operating Engineer—printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EVERY VOTE COUNTS

The three most important words in the 1960 election campaign are: Register, work, vote.

In setting forth the duties of citizens—and especially of union members—we don't want to sound repetitious, but we must repeat and repeat the entreaty: register, work, and vote. We can't emphasize these three jobs too often to our members and to all members in unions in the American labor movement.

Before going into detail on the problem and figures on voting, I would like to make a few general observations on the 1960 campaign.

Most of the election publicity in the public press and on television and radio will be devoted to the faces and fortunes of the Presidential candidates and their vice presidential running mates. Since these personalities will receive more than adequate attention, I should like to invite attention to some other offices.

LABOR WANTS FAIRPLAY

The party which wins the Presidency will control the Executive Department of the Federal Government. We would not minimize the importance of this fact, especially since the controlling party has the say-so on who will be named to commissions, agencies, the Cabinet, etc. It is most important that we have the right kind of people on these regulatory and administrative agencies. I don't need to point out that a National Labor Relations Board which can be strongly pitched against labor can be a real problem. Organized labor has never said that it wants an uneven or unfair advantage before our Federal or State regulatory agencies. All we want is an even break and fairplay. Impartial administration and regulation of laws and the rules governing the conduct of all affairs which affect unions and union members are all that we seek and all that we ask.

Although primary focus is directed toward the top election tickets, and while we would not downgrade their importance, we invite attention to other candidates before the electorate.

This year one-third of the Members of the Senate and all the Members of the House of Representatives are standing for election. It is important, indeed, that we elect a Congress which will be fair and unbiased. A Member of the Senate is in office for 6 years, and so when the voters name a man for that office in his State they either enjoy the fine service of a good man who is fair as a Senator or they are stuck with an untrustworthy one on whom they cannot really depend. It is up to the voters to name the right kind of men to the Senate.

REELECTION IS A PROBLEM

The Representatives' office term is only 2 years, and this often means that the Member has to spend about half his time, the last half, politicking in order to get reelected.

Congress is especially important with reference to laws which affect all the people. Regulation of labor is, of course, the one big item with which labor unions are most familiar. The lives of unions and their members have become a great deal more complicated and regimented since the passage of the Taft-Hartley law in 1947 and the Landrum-Griffin law (Labor-Management Reporting and Disclosure Act) of 1959. We will get more of this type of legislation unless we elect the right kind of candidates and insist that they stick to their preelection pledges.

Too often union people neglect State elections in which members of the State legislatures are named. Many of these elections are decided on personal or local issues, most frequently having nothing to do with labor or its problems.

On the other hand, many problems come before State legislatures which vitally concern organized labor and working people generally. We all know about State right-to-work laws and how damaging they can be. Any threat of a right-to-work law should be a big red flag to all union voters and their families. But there are other items on the legislative agenda affecting labor.

State minimum wage standards, educational appropriations and regulations, unemployment insurance allowances, standards of workmen's compensation, safety regulations, and a host of other subjects are within the province of the State legislatures. If the working people want a decent break in these areas, they must elect the right kind of candidates to State office. They should not become wholly preoccupied with the presidential race and neglect State contests.

Labor can take a licking even in cities through oppressive regulations passed by a city council. Some of these regulations can hamper some of labor's most basic activities in the way of organization and conducting its business at the local level.

Thus we see the importance of voting and voting intelligently at every level, city, State, and Federal.

These observations bring us to the concept of the importance of every single vote. In 1944 the late Senator Robert A. Taft carried Ohio by less than one vote per precinct—one vote per precinct. A smiliar victory for another Senator, the late Richard Neuberger, in Oregon, was chalked up in 1948—a margin of one vote per precinct.

EIGHT TEN-THOUSANDTHS OF 1 PERCENT

In the State of Texas a total of 494,191 votes were cast for LYNDON JOHNSON for the U.S. Senate in 1948. He defeated his opponent, a former Governor, who received 494,104 votes. This was a margin of 87 votes out of 988,295 votes cast. Don't tell any partisans of LYNDON JOHNSON that their votes didn't count when the figure 87 vote-margin represented eight ten-thousandths of 1 percent of the total.

Former Gov. Averell Harriman won in 1954 by slightly more than one vote per precinct and 1950 Michigan's Gov. Mennen Williams was elected in 1950 by less than one vote for every three precincts.

The closeness of the 1948 presidential election is recalled by all, but many may not recall that President Truman won Ohio by one vote per precinct.

In looking at these close votes we might well examine the scorecard on voting by States. What States do the best job of getting out the vote? Idaho ranks at the top or did in the 1956 presidential election with a figure of 77.3 percent while Mississippi had the dubious honor of being the low man on the election totem pole with 22.1 percent. The table below, compiled by the American Heritage Foundation, shows the rank of States in voting percentages in 1956.

SIMPLE LAWS ARE GOOD LAWS

In this connection we should note also that the high-ranking States are those with election laws which make it easier to vote while the low-ranking States are those with difficult and complex laws. In Idaho, for example, it is possible to register up to 3 days before an election and voters enjoy permanent registration. That State requires only 6 months' residence in the State and 30 days in the county.

By contrast the lowest State, percentagewise, Mississippi, requires 2 years' State residence; has a poll tax, and allows no registration after the first week in July and also has a literacy test. Some of the low ranking States, Alabama, Louisiana, Mississippi and South Carolina, do not permit mail balloting by civilians.

These facts on our poor showing at the polls should be enough to stimulate a better job by all this year. The stakes are high and I sincerely hope that every member of our organization realizes the importance of getting his family all registered and when election day comes getting them to the polls to vote for the right candidates.

How States ranked percentagewise in civilian voting in 1956 presidential election results

National average—60.4

Rank	State	Percent voting
1	Idaho	77.3
2	Connecticut	76.6
3	Utah	76.1
4	Massachusetts	75.3
5	New Hampshire	75.2
6	Rhode Island	74.6
7	Iowa	74.1
8	Illinois	72.5
9	Indiana	72.4
10	West Virginia	72.4
11	Montana	72.3
12	South Dakota	72.2
13	Delaware	71.5
14	Washington	71.4
15	New Jersey	70.1
16	Colorado	69.6
17	Wyoming	68.9
18	Vermont	68.6
19	Oregon	68.5
20	Minnesota	67.8
21	Kansas	67.7
22	Missouri	67.5
23	Michigan	67.1
24	North Dakota	67.0
25	Wisconsin	66.6
26	Nebraska	65.9
27	New York	65.5
28	Pennsylvania	65.0
29	California	65.0
30	Ohio	64.9
31	Nevada	64.7
32	Maine	64.6
33	Oklahoma	64.0
34	New Mexico	62.1
35	Kentucky	56.7
36	Maryland	54.8
37	Arizona	49.7
38	Florida	48.3
39	North Carolina	47.7
40	Tennessee	46.0
41	Arkansas	39.9
42	Texas	38.1
43	Louisiana	37.3
44	Virginia	34.2
45	Georgia	30.4
46	Alabama	28.5
47	South Carolina	24.6
48	Mississippi	22.1

The Port of New York Authority

SPEECH

OF

HON. LAURENCE CURTIS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 23, 1960

Mr. CURTIS of Massachusetts. Mr. Speaker, we are told that the Port of New York Authority has not properly conducted its business. We are told that it has made errors in the awarding of contracts and in other respects. Certainly there should be adequate supervision of this great enterprise, but that is the responsibility of the States of New York and New Jersey. It is not the responsibility of the Federal Government or of the Congress.

The Port of New York Authority is not substantially different in its legal structure from the Massachusetts Port Authority, except that it was organized by two States instead of by one. As in the case of the Massachusetts Port Authority, its functions are State functions. They are State functions performed by an agency of two States instead of by an agency of one State. That fact does not justify a greater exercise of Federal power over it than over the Massachusetts Port Authority.

It is argued that the Federal Government has greater power over the Port of New York Authority because it was formed under an interstate compact which required the consent of Congress in accordance with article I, section 10 of the Constitution, which reads:

> No State shall, without the consent of Congress, lay any duty of tonnage, keep troops or ships of war in time of peace, enter into any agreement or compact with another state, or with a foreign power, or engage in war unless actually invaded, or in such imminent danger as will not admit of delay.

This clause of the Constitution does not grant Congress any power of continuous oversight over State agencies formed under an interstate compact to which the Congress has given its assent.

Those who support the Federal investigation, however, rely on the reserved right of Congress to alter, amend or repeal its consent to an interstate compact. It is argued that if the Congress has the right to alter, amend or repeal its consent to a compact, it must necessarily have the right to investigate operations under the compact in order to determine whether it should exercise such right.

This reservation of the right of Congress to alter, amend or repeal its consent is a part of the resolution of Congress granting its consent. If the reserved right of Congress to alter, amend or repeal its consent carries with it the power of continuous supervision over the affairs of State agencies formed under an interstate compact, it greatly broadens the Federal power over such agencies.

But how can this broadening of Federal power be based on a resolution of the Congress? A grant of Federal power cannot be made by Congress, but must have its justification in the Constitution itself.

The words of the Constitution requiring the consent of Congress to an interstate compact cannot be construed as carrying with them the right of Congress to alter, amend or repeal its consent. This additional right would in turn carry with it a grant of Federal power of continuous supervision over agencies formed under a compact.

The above quoted article I, section 10 of the Constitution was clearly not intended to include such a grant of Federal power. To hold otherwise would be to read the article as though it also provided, following the requirement of consent to an interstate compact:

> And the Congress shall have power to alter, amend or repeal its consent and look into the operations of State agencies operating under the compact in order to determine whether such consent should be altered, amended, or repealed.

Had the framers of the Constitution desired to include such a provision they could have done so. And if it is claimed that these words were included by implication, why is it necessary for the Congress in the resolution granting its consent to include a reservation of its right to alter, amend or repeal its consent?

The Federal power cannot be so broadened by any such implication.

Even if it be conceded that the constitutional requirement of the consent of Congress to interstate compacts gave it some rights to look into the operations

under the compact, it is clear that those rights should be regarded as strictly limited. They should be construed as relating to such broad questions as to whether the agency was exceeding the rights which it could properly exercise under the compact.

They should not be construed as vesting in Congress the right to control the internal management or daily affairs of the agency, or to pry into such matters. The Port of New York Authority contends that the documents which it has refused to produce relate only to such matters.

The present controversy arose in connection with airport construction. The Port of New York Authority had occasion to study the need for a new airport in New Jersey. Its activities were preliminary, as it has no power to construct the airport without first submitting the project to the legislatures of the two States and securing legislative enactments authorizing the construction.

As a result of opposition to this project, a question was addressed to a committee of the Congress as to the extent of the powers and jurisdiction of the Port of New York Authority, and the committee undertook an investigation.

It is clear from the record that this investigation was not confined to determining whether the authority was exceeding the rights which it could properly exercise under the compact. The investigation sought in addition to look into detailed operations and internal management of the authority including such matters as the ways in which contracts for supplies had been negotiated and employees had been engaged.

Upon receipt of the demands for the production of this type of material, the Port of New York Authority referred the question to the Governors of the States of New York and New Jersey. After full consideration, the Governors authorized the Port of New York Authority to make available to the committee a mass of material indicating the nature and range of its activities, including the official minutes of the port of authority commissioners, its annual reports, and financial reports, and annual audit reports of independent outside auditors.

The Governors instructed that the materials relating to the internal structure, organization, and administration of this agency of the States were not lawful subjects of the investigation by the committee, and they directed the port authority not to produce such material. Three officers of the port authority refused to produce such material and were found in contempt of the committee, and resolutions citing them for contempt of Congress are now before the House.

I have urged that if the constitutional requirement of consent carried with it any right of Congress to investigate operations under the compact, that right should be regarded as limited to such broad questions as whether the agency was exceeding the rights which it could properly exercise under the compact. If so, a refusal to produce documents bearing only on the internal structure, day-to-day administration, and similar matters relating to this agency, was justified, and the resolutions before the House should be defeated.

Up to this point I have been discussing the constitutional requirement of consent to interstate compacts as justifying an investigation into the affairs of the Port of New York Authority.

Such right of investigation is also sought to be justified by the constitutional power of Congress over interstate commerce. I believe that the commerce power furnishes no such justification.

The power of the Federal Government over interstate commerce is not exclusive. Unless and until the Federal Government has seen fit to provide by legislation for Federal regulation of a State activity affecting interstate commerce—either specifically or under the doctrine of preemption—the power of the State to regulate that activity remains plenary and undisturbed.

The Massachusetts Port Authority and other port authorities deal with matters directly affecting interstate commerce, as does the Port of New York Authority. But we have been told by the gentleman from Louisiana [Mr. WILLIS], that "all other ports in America are the creation of State legislatures and are subject to the exclusive jurisdiction and control of State laws."

They all deal with matters affecting interstate commerce, and when it is a question of the right of Congress under the commerce power and not a question of the right of Congress under the alleged power flowing from its consent to a compact, it is hard to see why the same standards should not be applied to a bistate agency as to the agency of a single State.

It is a common misapprehension to assume that once it appears that a certain activity relates to interstate commerce, that fact justifies every kind of Federal intervention.

One of the acknowledged leaders of the House on constitutional law matters, the gentleman from Louisiana [Mr. WILLIS], does not rely on the commerce power as justifying the investigation of the Port of New York Authority. He justifies it on the power of the Congress to alter, amend or repeal its consent to the compact under which the authority was formed.

But other members, and also the committee report, have relied on the commerce power to justify the investigation. The fallacy of this argument is shown by the fact that practically everything they said regarding the interstate aspects of the activities of the Port of New York Authority would apply equally to the Massachusetts Port Authority which, according to the gentleman from Louisiana [Mr. WILLIS], "under the exclusive jurisdiction of State law."

I stated above that certainly there should be adequate supervision over the activities of the Port of New York Authority, but that was the responsibility of the States of New York and New Jersey, and not of the Federal Government or of the Congress.

It has been suggested that the States of New York and New Jersey lack adequate power to investigate and control the Port of New York Authority. But the record shows that the Governors of New York and New Jersey had very complete control. It shows that the activities of the Port of New York Authority had to be approved in the minutes of the board of the authority, and that the Governors of New York and New Jersey each had the right of veto over such minutes, and thus over the activities of the authority.

The proper forum for complaints about the operations of the Port of New York Authority was before the Governors or legislatures of these two States, not before the Federal Government or the Congress.

The States of New York and New Jersey have ample power to investigate the activities of the board, and no investigation by the Congress of the internal management and day-to-day activities of the Port of New York Authority is justified. Nor is the demand by the Congress for production of documents bearing on such matters proper, and the citations for contempt now before the House should be defeated.

Houston Post Reports Nationwide Survey Points Up Great Value of Parks

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, August 30, 1960

Mr. YARBOROUGH. Mr. President, a recent survey by the U.S. Department of Interior gives interesting figures to illustrate how, from a dollar standpoint, parks are of great value to the Nation and the State. Padre Island National Recreational Area is badly needed now.

Putting aside the great inspirational and recreational value of parks, it is clear that good parks are good business.

I ask unanimous consent to have printed in the Appendix of the RECORD an editorial on this subject from the August 17, 1960, issue of the Houston Post entitled "Nationwide Survey Points Up Great Value of Parks to States."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NATIONWIDE SURVEY POINTS UP GREAT VALUE OF PARKS TO STATES

The value placed on parks by States is graphically revealed by a study of State park statistics for 1959, made by the U.S. Department of the Interior. It shows the comparative park expenditures by States, the sources of funds, park attendance, area and acreage, and personnel.

Park expenditures last year ranged from $21,757,342 in California, $17,006,098 in New York, more than $3 million each in Illinois, Ohio, and Pennsylvania, more than $1 million in 17 other States, on down to $553,986 in Texas (much more than the average, because of permanent improvements), and smaller amounts in some States.

The harvest reaped from the expenditures is reflected in the number of park visitors. California parks registered a total attendance of 22,195,000 for the year—nearly four times

Texas' attendance of 5,768,000. New York parks reported an attendance of 31,310,000—nearly six times as many as ours. True, these States are two of the principal meccas to tourists, but their parks were major factors in building up the tourist trade. Michigan offers no more tourist attractions than Texas, yet Michigan spent nearly four times as much on its parks, and drew nearly four times as many park visitors. Ohio spent $3,419,858, to Texas' $553,986, and had 17 million park visitors, to Texas' 5,768,000. Oregon spent $1,980,718 and enjoyed a park attendance of 10,235,665. Even Oklahoma, with about one-third of Texas' population and certainly no greater proportion of tourist attractions, spent more than $2 million on its 33 parks, and had a park attendance of about 9 million.

All of which leaves the big question: What are tourist park visitors worth to a State? Well, most of them are tourists, and no one has yet evaluated them more expressively than the Dixie chamber of commerce manager who said, "A tourist is worth a bale of cotton, and is twice as easy to pick." Their total spending makes State expenditures on parks a tremendously profitable investment for the State and the localities visited. If it did not, those progressive States that support their parks so well would not keep it up.

Potentially even more important is the emigration of citizens with their businesses and industries to a State which has impressed them as tourists. Texas' charms in this department are as great as in the scenic or recreational.

The Texas Legislature's niggardly support of this State's parks, as reflected in the foregoing figures, has not enabled them to draw half as many tourists as would come if their improvements, facilities, and services were on a par with those of States that support them decently. For instance, Texas has only 70 year-round employees to operate its 50-odd parks. Compare these figures with the statistics of a few other States that have thrice as many employees and no more park areas, if as many:

Kentucky, 27 parks, 280 employees; Michigan, 56 parks, 227 employees; Ohio, 54 parks, 226 employees; Oklahoma, 33 parks, 338 employees; Tennessee, 20 parks, 233 employees. Some States have far more personnel.

When is Texas going to awake to the fact that good parks are good business? The Department of the Interior's comparative statistical study should be an eye opener to them.

Carpenters Buy $2½ Million Worth of FHA, VA Mortgages

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 30, 1960

Mr. GEORGE P. MILLER. Mr. Speaker, I am honored and happy to call to the attention of my colleagues in the Congress, the farsighted and enlightened position the Bay Counties District Council of Carpenters has taken with respect to the investment of some of the pension plan funds of the organization.

By plowing them back into FHA and VA home mortgages, they not only stimulate home building but demonstrate their confidence in the future of America.

The Bay Counties District of Carpenters by this action is making a sound contribution to democracy and are to be congratulated and commended.

I wish to quote an article appearing in the East Bay Labor Journal published in Oakland, Calif., on August 26, 1960.

CARPENTERS BUY $2½ MILLION WORTH OF FHA, VA MORTGAGES

Carpenters unions in four Bay area counties have been investing $400,000 per month in FHA and VA home mortgages for the past 6 months as a means of stimulating homebuilding industry.

Investments to date total around $2,500,000, acording to C. R. Bartalini, executive secretary of the Bay Counties District Council of Carpenters.

The council is the central policymaking body for 29 affiliated carpenters unions with 24,000 members in Alameda, San Francisco, San Mateo, and Marin counties.

Bartalini explained that the money being invested comes from the pension plan funds of the various unions and is being poured back into the areas in which the unions have jurisdiction.

Only a portion of the pension plan funds is being invested in mortgages, however, Bartalini said. Other sums are invested in stocks and bonds which offer a lower rate of interest than mortgages.

Aside from serving to stimulate the industry which provides bread and butter to carpenters and other building trades workers, the buying of home mortgages also results in a balanced portfolio of investment for pension plan funds, Bartalini said.

He indicated he thought the total amount of pension money to be invested in home mortgages will not be much greater than the $2,500,000 already poured in, and that the $400,000 monthly allocations will shortly be discontinued.

Bartalini said that the carpenters unions of the four counties are currently paying out $35,000 per month in retirement benefits. The first retirement benefits were mailed about 15 months ago, in June, 1959.

At the present time, approximately 700 retired union members are receiving monthly pension checks of $50 each, Bartalini said.

Bartalini, in addition to serving as executive secretary of the Bay Counties District Council, is president of the California State Council of Carpenters.

Life Magazine Uses Carriers for Home Delivery

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES

Tuesday, August 30, 1960

Mr. CARLSON. Mr. President, from time to time we hear criticism of the alleged postal subsidies received by some of the larger newspapers and magazines in this country, despite the fact that postal rates on second-class mail have been raised approximately 90 percent since 1951. Furthermore, according to the official records of the Post Office Department, second-class mail will be producing approximately $100 million in revenue for the Post Office Department once the 1958 Postal Act has fully run its course. The last increment of increase on second-class mail goes into effect January 1, 1961.

Because of the emphasis on the pound rate in the second-class rate structure, the bulk of these revenues fall on a very large newspapers and magazines—less than 1 percent of the total of 25,000 newspapers and magazines with second-class entry.

As a member of the Committee on Post Office and Civil Service, I have been fearful that our rate structure may lead to driving some of our more prominent publications from the mails and thus deny them equal advantage because of their bigness. I believe this concern is fully justified because in the August 20, 1960, issue of Editor & Publisher I note that Life magazine is now experimenting on a system of home delivery outside the mails.

Mr. President, I ask unanimous consent that the article entitled "New Jersey Weekly, Life Join on Delivery Deal" be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW JERSEY WEEKLY, LIFE JOIN ON DELIVERY DEAL

Life Circulation Co. started this week making home deliveries of Life, Time, and Sports Illustrated in the northern New Jersey area in a tie-up with the carrier system of the Freehold (N.J.) Transcript, a weekly.

John Hallenbeck, Life's circulation director, and president of LCC, a subsidiary, described the deal as the latest development in an experimental program of home delivery by the Luce publications that started last March. So far confined to suburban New Jersey and Staten Island, where LCC is recruiting its own carriers, Mr. Hallenbeck said the step-by-step development of the experiment contemplated contracts with daily newspapers.

"We have in mind that our plan could be worked well with a combined morning and evening daily," Mr. Hallenbeck said.

Basic sales method for the foreseeable future, however, is most likely to be through LCC's own carriers, according to Wendell Forbes, circulation manager of Life and general manager of LCC.

"This is different than the classical idea of selling magazines by boys," Mr. Forbes explained. "It is a system of carrier delivery rather than sales."

DIVERSITY ESSENTIAL

"We believe a diversity of marketing methods is essential to magazines like ours. We think that the experiment is working out well, and will have no bad effect on newspapers."

The Freehold deal was made by William Pike, of LCC, with Michael J. Torpey, general manager of the paper. All transactions are between the magazine and the newspaper rather than with the carriers individually. Mr. Pike, formerly suburban circulation manager of the New York Times, was engaged by LCC last November to give this home delivery system a try.

The Transcript has 41 carriers. Soliciting for Life, Time, and Sports Illustrated home delivery on a week-by-week basis is all done by salaried personnel of LCC. The boys get a commission of 4 cents a copy on each magazine. Life sells for 19 cents a copy on the newsstands in this area, the other two magazines for 25 cents. The Transcript sells at 10 cents a copy, of which the carriers also get 4 cents.

LCC telephone solicitors have been furnished with a master list of Transcript car-

riers and their routes. No calls are made to areas in which the Transcript is not being delivered. The Transcript is now delivering between 8,500 and 9,500 copies weekly, of which 1,000 are for sampling purposes.

The boys are being furnished with two metal paper carriers that fit on each side of their bicycles, marked with the name of the paper and those of the three magazines.

"DROPS" AT TRANSCRIPT

Drops of the three magazines are made at the Transcript office, where they are divided among the boys for delivery. Delivery is made Thursday with the Transcript. Prize contests among the carriers will be part of the plan, according to Mr. Torpey.

In the case of other sections of suburban New Jersey where LCC is recruiting its own carriers, drops are made to drop points from which copies are relayed to the boys. The Hackensack News Co. and the Hudson County News distributors deliver to the drop points according to Mr. Pike. On Staten Island the magazines come direct from the Philadelphia printing plant.

LCC has established branch offices in Teaneck and Bloomfield, N.J., to supervise the operation.

"We are creating our program as nearly like the newspapers as possible. Naturally we are abiding by all State and local community regulations," Mr. Pike said.

Mr. Pike said LCC has had no trouble recruiting boys. Generally they are in the 14- to 15-year age bracket. Some are as young as 12. The commission they get for the weekly deliveries is sufficient to interest them working the 1-day a week—Wednesdays. On that day they deliver magazines dated the following Monday.

Public Health

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 30, 1960

Mr. RHODES of Arizona. Mr. Speaker, to meet the growing health needs of the Nation, the Eisenhower-Nixon administration has pressed forward in the fields of research and training of personnel and of stimulating State, local, and private agencies to expand and improve their facilities and services. Government action which has resulted in major improvements in public health has been of a character which neither discourages nor destroys private effort to combat disease and to lighten the costs of serious illness.

First. Public Health Service appropriation more than tripled in the last 7 years.

Second. National Institutes of Health appropriations increased from approximately $59 million in fiscal year 1953 to $400 million in fiscal 1960.

Third. Health research supported by the National Institutes of Health at outside scientific institutions increased nearly sevenfold—9,166 grants-in-aid amounting to $142,627,000 in fiscal year 1959 compared with 2,054 grants amounting to $20,936,000 in fiscal year 1953.

Fourth. Facilities for health research expanded under new legislation providing $30 million annually to non-Federal public and nonprofit private institutions to help finance construction of health research facilities.

Fifth. Manpower skilled in medical research increased. Seven thousand three hundred regular fellowships and 6,300 in other categories awarded by the National Institutes of Health between 1954 and 1960.

Sixth. Water pollution control program made permanent in 1956. In return for Federal grants amounting to $178 million, 2,100 communities have been stimulated to put up $854 million to build new or to improve existing water pollution control system.

Seventh. Federal program of research and technical activities established to strengthen control of air pollution.

Eighth. National Health Survey initiated providing data for developing more disease research and control programs for planning health facilities and services.

Ninth. National Library of Medicine founded—will be the Nation's most important source of medical literature.

Tenth. Polio vaccine and inoculation of children carried out by Federal program of assistance to States amounting to $53,600,000.

Eleventh. Grants have been increased for Maternal and Child Health and Crippled Children's Services.

Twelfth. Broadened the program of Federal aid for construction of hospitals and outpatient facilities to include chronic disease hospitals, nursing homes, rehabilitation facilities and diagnostic and treatment centers. Current appropriation for hospital and outpatient facilities is $150 million—double the appropriation of 1953.

Thirteenth. Government action in the health field has been of a nature to stimulate rather than discourage private efforts to provide health services and to protect the American family against the costs of medical care.

As for essential services, note the following increases in public service sectors of the Federal budget between fiscal year 1953 and fiscal year 1961—proposed: Veterans, up 28 percent; labor and welfare, up 91 percent; natural resources, up 27 percent; General Government, up 27 percent.

In addition, State and local governments have expanded spending on services greatly—up well over 50 percent since fiscal year 1953. As for interest charges, these have been an essential cost of carrying the high public debt which the Republican administration inherited. The only way to bring down the cost of the public debt is to resort to the loose-money, low-interest policy of the Democrats which cut the value of the dollar in half during their period in power or to reduce the size of the debt, which Republicans are pledged to do.

Small Business

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES

Tuesday, August 30, 1960

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement made by Hon. George J. Burger, vice president of the National Federation of Independent Business, before the platform committee of the Republican National Convention in Chicago, Ill., on July 20, 1960.

Mr. Burger's comprehensive and constructive statement, made on behalf of an organization representing small independent business and professional people from American enterprise, deserves the serious consideration of Congress and the next administration.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

SMALL BUSINESS PLANK FOR PLATFORM

(By George J. Burger)

I am George J. Burger, vice president, National Federation of Independent Business. We are an organization of small, independent business and professional people from all vocations of American enterprise. We have the largest directly supporting membership of any business organization in the Nation, with chapters in almost all of the Nation's 437 congressional districts. We are the only organization that makes it possible for business-professional people to take an active interest in Government affairs by means of personal ballots voted in national polls, with signed opinions sent directly to the desks of lawmakers at both Washington and in the States.

We have a single aim: "That our Nation remain the land of opportunity by giving small business fair consideration." Very definitely this eliminates any selfish pleading, for it goes right to the taproots of our freedoms: the personal dignity of each of our citizens, which is based in great part on the basic individual human right, rooted in the natural law and reflected in our Constitution, to acquire, hold, and use private property consistent (be it noted) with disregard for the rights of others. In a real sense, this right to private property implies a right to independent enterprise opportunity. Without the latter, the former is meaningless. Thus, our aim is not limited, but very directly touches on the welfare of all our people, on the basic freedoms and strength of this Nation under God.

By "fair consideration," our members mean they want only honest enforcement of the rules of business fair play, equitable tax treatment, minimum Government interference and competition, equal consideration with all other segments of our Nation in policy-making. They seek neither "special privilege" nor handouts. They are independent enterprisers, and want only to stand on their own two feet.

We are here for one purpose only: to urge you to commit your party to a strong independent business program that will further add to the fine progress registered over past years. Small businessmen are far from out of the woods. But they have taken heart from the fact that the parties have honored 12 of the 18 major action pledges made during the 1956 presidential conventions. Our members deeply appreciate this, and hope only that you will frame a constructive 1960 platform that will provide a springboard for further securing independent business opportunities in the years ahead.

Before going further, let us make this clear: the recommendations we are about to make on behalf of our members are based directly on the personal, signed opinions in our national polls * * * inshort, we speak the voice of small business itself.

ANTITRUST

Our members urge continuation of the trend toward stronger antitrust enforcement which has marked the past few years, be-

cause this is basic to independent business opportunities. Let an independent enjoy ideal conditions in taxes, labor relations, etc. * * * Yet without first having fairness in competition he is doomed to failure. Just as well try to fill a sieve with water as to enact constructive independent business programs without first providing fairness in competition through effective antitrust enforcement. Our members recommend especially three major steps to strengthen the bite of these laws: (1) freeing the chief official of Justice Antitrust Division from political and other pressures by making his a semipermanent position like that enjoyed by Federal judges, with sufficient tenure to lay out action blueprints and follow them through, (2) revision of laws to provide that manufacturers who sell both through independent outlets and their own factory chains be required to grant their independents the same buying price consideration as they do their factory retail outlets, and (3) further sharpening of the teeth in antitrust penalties by providing that officials of firms convicted of repeated unfair, monopolistic price discriminations may be disbarred from business executive positions, the same as lawyers and doctors may be disbarred for unethical practices. Let us face the facts honestly. Too many most important antitrust cases have died on the vine because of shifting direction over a period of various administration. Too many independent business people today are exposed mother naked to destruction of years of building because their manufacturers have installed competitive retail factory-owned outlets that can sell, and are selling, at or below their buying costs—a situation that's entirely outside the pale of corrective antitrust enforcement. Too many high officials of giant businesses today rank antitrust threats to questionable practices as nothing more than another golf course obstacle because penalties (though stricter than before) are little more than slaps on the wrist. Our members feel the three foregoing recommendations can make much needed corrections. Additionally, they urge extension of antitrust law coverage to both labor unions and cooperative-type organizations.

GOVERNMENT REPRESENTATION

Experience has proven to our members that progress in sound small business programs is proportionate to study and attention in this field. They have hailed continuation of the temporary House Small Business Committee, advancement of Senate Small Business Committee to permanency, and action that has made Small Business Administration permanent in the executive branch. They feel that now, however, the Small Business Committees are out of their swaddling clothes; and, if they are to do the job that must be done, must be granted full, standing committee status to consider and report legislation to the floor of Congress, just like committees representing agriculture, labor, and other important segments of our economy. They have heard all the arguments against this, that "it will involve jurisdictional problems, and so forth," but feel that just as Congress in its wisdom heard and ignored these in expanding its committee system in the past to provide representation for other important parts of our economy, it should be able to do the same for independent business, which is the backbone of our Nation. Further, our members feel that Small Business Administration is a big boy now, capable of running its own show, and that it should be made independent in fact as well as name, by eliminating the Loan Policy Board and vesting full control in the hands of the Administrator subject directly to Congress, as is the case with other independent agencies. Finally, they feel there is need for the President to appoint a Secretary of Small Business in his Cabinet, to cap this program of providing adequate independent business representation in Government. For details, see appendix B.

TAXATION

Needless to say, our members are very pleased with the $260 million first-step Small Business Tax Adjustments Act and with the recent action by Congress to grant the self-employed the same private retirement benefits as have been enjoyed by corporation executives and employees, which have flowed from the 1956 platforms. They hold a good start has been made, but much remains to be done. Our polls show they think it time for action to reduce the direct income tax load on smaller corporations, to provide tax deductions for improvements in small businesses, and to provide the same fast tax chargeoffs on purchases of used equipment as are allowed on new equipment, as well as many other projects covered in appendix C–1, attached.

Of course, as practical businessmen, our members realize that financial soundness is a must for a nation as well as a family or a business. They have voted time and again for measures to tighten up equitably on the tax treatment of cooperatives, for elimination of all Government competition with independent business (which will at once reduce Government costs, and enlarge the area of tax-generating private business), to increase Government income. Same time they have voted for measures to reduce the multimillion dollar subsidies Government pays out to big businesses and big farmers, for reduction in or elimination of foreign-aid expenditures (especially to nations which are on their feet), for greater economies in Government purchasing (which directly involves all possible action to provide fairer opportunities for independents to compete freely for Government contracts), and surplus property disposal (as outlined in the Hoover Commission reports), and for reduction in Federal redtape reporting procedures (which at once add to Government paper shuffling costs and to the overhead burdens of businessmen), to reduce Government spending. Between the two, room can be made for the badly needed small business tax reductions. Recommendations in these fields are itemized in appendix C–2.

LABOR-SOCIAL WELFARE

Our members, many of whom have risen from the ranks of labor and still proudly carry union cards, have enthusiastically greeted action by the 86th Congress which provides greater fairness in dealings between businessmen and labor unions. They urge that you and your party commit yourselves to further progress along these lines. For instance, they believe our laws should restrict bargaining to the local level. They feel nationwide wage pattern bargaining is unreasonable. They believe unions should draw pickets from struck businesses only, and no union should be permitted to picket a business unless it has the support of one-third of the employees of the business. The foregoing and many other suggestions are fully covered in appendix A–1.

As to social welfare, there are no people in our country more sensitive to the needs of our citizens than independent businessmen. However, our members must be practical. They are taxed now until it hurts. They want to avoid being taxed until it kills. Bankrupt enterprises benefit no one. For that reason they ask that you avoid commitments in this field which involve additional tax burdens, as are set forth in appendix D–2.

INTERNATIONAL TRADE

Our members realize that helpful efforts have been made by Congress since 1956 to provide tariff laws which will promote fairer competition in international trade, and that will protect higher cost American businesses against cutthroat competition from lower cost foreign goods that are sold in our markets. They realize that this is a competitive world, and that to live we must compete and trade. However, they have seen giant American firms relocating overseas to take advantage of more favorable cost situations, possibly with the intention of selling back into America, they have seen employment in almost entire lines and communities dry up due to lower priced foreign competition, and they have reason to believe that this situation can become worse. They realize that all competition implies some damage, but they object to being sent into the ring with one hand tied behind their backs. They feel that steps must be taken in this area as soon as possible to provide greater fairness for American firms competing with foreign products in our markets. For their votes on these problems, see appendix E–1.

HIGHWAY-POSTAL PROBLEMS

Our members have consistently opposed further increases in either Federal excise taxes on gasoline or in postal rates, as totally unfair additions to their personal and business overhead costs. They do not feel that gasoline excise taxes should be raised to pay for highway programs when so much of other automotive-industry-generated excise taxes are going for general spending. Further than this, they believe that when Government, in the name of the people, compels businessmen to relocate due to highway construction (incidentally, the same would go for urban renewal situations), Government assumes a duty to assist in making relocations financially possible, where necessary. As to postal rates, chief pressures for increases have been on first-class mail, some 75 percent of which they use for business purposes. They flatly oppose any further increases in this field, which is more than paying its way, so long as users of other classes of mail are being effectively subsidized by the Post Office Department. Particulars of their votes in these fields are found in appendix F.

STATE-FEDERAL RELATIONS

Our members believe in a just division of powers between the National and State Governments. They realize the need, in this day and age, for strength at Washington. At the same time they realize that the taproots of our country's strength are still with the individual citizens in the towns and cities and States of the country. They believe that there are definite dangers to our individual freedoms in any development which might tend to make our State governments mere shadows of Washington, D.C. For that reason our members have consistently opposed all measures which have seemed to take just powers away from the States and repose them at Washington, but equally they have opposed all measures which have seemed to take just powers away from Washington and repose them with the States. For instance, our members recently favored a bill which proposed that the Federal courts be prohibited from ruling that Federal laws override State laws except when the Congress specifically directs. Equally, our members opposed a move by the States to tax the income of out-of-State firms, not only because of the effect on small business interstate sales opportunities, but also because this seemed to represent a State effort to tax interstate commerce, an area specifically reserved to the Federal Government. Appendix G–1 will furnish you a closer view of their votes in this important area.

CONCLUSION

Believe us, it has been a pleasure and privilege to appear here and counsel with you, just as we did with your platform committees in your 1948, 1952, and 1956 conventions. We do appreciate all the progress that has come of your resolves in those years. We look for further advances in the years ahead.

Finally, may we say that this current business of yours and ours is most serious. Not so long ago, the Kremlin's Prince of Darkness declared that communism is the wave of the future. He prophesied that our children, in time, will live under Communist dictatorship.

Let's not kid ourselves, this could happen, unless we take action here and now to bulwark the only rock against which this wave will not prevail: the individual dignity of each of our people in full enjoyment of all their rights as found in the natural law and reflected in our Constitution.

We are, thank God, and thank our forebears for all their dreams and sacrifices, a free people. Let us maintain our freedoms by further strengthening one of their most important underpinnings: The right of each and every last one of our people to independent enterprise, fair consideration, and opportunities.

The Record—On an Expiring Congress

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. TRIMBLE. Mr. Speaker, I rise today in defense of those who in good faith attempt to analyze the public record we have written during the past 2 years by listing the issues voted upon and giving our votes upon them, even though I come out on the short end of some of the published lists. Their conclusions are reached by applying standards of measurement which to them seem just for the particular group or organization which makes the compilation.

I am sure you will all agree that the CONGRESSIONAL RECORD will never be a best seller. It is endlessly written, and it is said that it is not read completely by anybody. Yet, as an annal, it has something for everyone. In it may be found from time to time: nursery rhymes, poetry, the weighed philosophy of men in thoughtful debate, and the error, innuendo, and anger of thoughtless controversy. Here one may perchance find the best and the worst decisions on the problems of today and of tomorrow. Those who use the RECORD in their day to day affairs may, by laborious effort, trace the public record of any individual Member of the Congress. Truly there is something for everyone in the RECORD.

Unlike a slate which may be wiped clean, once written, our RECORD becomes permanent. In this it is unlike men's minds which sometimes change. The finality of the RECORD is, therefore, a matter of concern to all of us while it is being written.

In this age of efficiency and precision, individuals and groups interested in the matters which come before the Congress have devised various means of categorizing or cataloging the acts and actions of those of us who are Members. They like to put us under a microscope of inspection; they like to come up with results which can be measured and which provide a basis for comparison according to their standards of measurement upon the issues and our votes upon these issues. The list should itemize the issues and our votes upon them so that anyone can see just what it is all about.

If one were to compare the record of two or more Congressmen, how would one equate a speech on foreign policy with a speech on acreage allotments for cotton, tobacco, or wheat? How would one compare the merits of service on the Committee on Interstate and Foreign Commerce with, for example, membership on the Committee on Rules, or any other committee? If speeches, committee service, and votes could all be properly weighed and equated, our people could have the best possible measure of Members of the Congress; but obviously such a task would try the judgment even of a Solomon.

Those who attempt to judge our work here must, therefore, base their judgments upon our recorded votes. There is no better way, because our voting record reflects our final judgment on the major issues upon which we have had the opportunity to express ourselves.

In my opinion, published voting records if made in good faith make a distinct contribution to the processes of democratic government. While they are not infallible, they make it possible for individuals and groups, be they politicians, political parties, or other public-interest groups, to bring before the voter the record of each Member of the Congress on a given issue or set of issues. For some of us, the results may sometimes be discomforting.

In the CONGRESSIONAL RECORD for June 27, 1960, a colleague complained about a voting record published by the National Rural Electric Cooperative Association. The National Rural Electric Cooperative Association and other groups who maintain records are researchers who jot down our votes on issues on which their members have taken positions.

I have tried to be a friend of the rural electrification program. I base this on my personal conviction that rural electrification is good for the country, especially rural America, and I have followed this conviction by supporting legislation which I believed good for that program now; and good for it and our country in the future. I have supported legislation to guarantee that the Administrator of Rural Electrification shall have full authority for making REA loans under a broad policy without first having to check the loans individually with the office of the Secretary of Agriculture. I have supported bills which provide adequate loan funds in order that the program may bring the blessings of electricity to every rural home in our land. I have supported Federal wholesale power projects — multipurpose dams—which would supply many rural electric systems with abundant power at reasonable cost; and I have supported other legislation which I thought would help our people stay on the farms and make a decent living.

In my opinion, these are the types of issues which are important when one attempts to find the friends of rural electrification in the Congress. I suppose if one were to obtain the percent of times I voted "favorably" according to NRECA's compilations of our votes, my record would be favorable among Congressmen whom they consider to be rural electrification's friends.

I have examined the NRECA compilation of my votes on measures on which the members of this national organization of the rural electric systems have taken a stand and find it correct with respect to my votes. I am always happy when I find it showing me voting with the rural electric systems' positions a majority of the time.

I am always glad to take my record as reported by NRECA back to my constituents. The NRECA compilation makes no attempt to rate Congressmen. They just list the votes, note the position of the rural electric ssytems on each issue, and let the reader form his own judgment.

As we go home from this session of Congress, perhaps we should remember the words of Abraham Lincoln who in his second annual message to the Congress said:

We of this Congress and this administration will be remembered in spite of ourselves. No personal significance or insignificance can spare one or another of us. The fiery trial through which we pass will light us down, in honor or dishonor, to the last generation. * * * We—even we here—hold the power and bear the responsibility.

Favoritism by Port Authority Highlighted by Santangelo

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 30, 1960

Mr. SANTANGELO. Mr. Speaker, when I was a member of the New York State Senate in 1954 I offered a resolution, calling upon the New York State Senate to examine thoroughly into the operations of the Port of New York Authority. My resolution died in the finance committee. The choking off of this resolution was due to pressures and influences exerted by officials of the port authority.

This was not the first time nor the last time these officials stifled and killed efforts in the New York State Legislature, and in the New Jersey Legislature as well, to inquire into the operations of the authority and to spread upon the public record the nature of their operations. I herewith give you a partial list of other examples. Following are some of the bills introduced in both State legislatures calling for audits or examinations of the port authority's finances and operations, all of which were frustrated and sidetracked:

NEW JERSEY

New Jersey Senate Joint Resolution 18 (1933): A joint resolution creating a commission consisting of three members of the senate to be appointed by the president of the senate, and three members of the house of assembly to be appointed by the speaker thereof, who shall constitute a joint com-

mission to inquire into matters relating to the Port of New York Authority. (Introduced March 9, 1933, by Mr. Powell and referred to committee of the judiciary, New Jersey Senate Journal, 1930, p. 356.)

New Jersey Assembly Joint Resolution 12 (1935): A joint resolution creating a commission consisting of three members of the house of assembly to be appointed by the speaker thereof, three members of the senate to be appointed by the president of the senate, and three citizens of the State of New Jersey, to be appointed by the Governor of the State of New Jersey, who shall constitute a joint commission to inquire into matters relating to the Port of New York Authority. (Introduced January 28, 1935, by Mr. Giuliano, and referred to the committee on miscellaneous business, minutes of the New Jersey House of Assembly, 1935, p. 223.)

Mr. Giuliano, chairman of the committee on miscellaneous business, reported assembly committee substitute resolution for Assembly Joint Resolution 12 (1935).

Mr. Giuliano moved that the clerk be directed to read in full the assembly committee substitute resolution for Assembly Joint Resolution 12. The title of the committee substitute resolution is as follows:

"A resolution creating a commission consisting of five members of the house of assembly to be appointed by the speaker thereof who shall constitute a commission to inquire into matters relating to the Port of New York Authority."

The New Jersey House of Assembly adopted the assembly committee substitute resolution for Assembly Joint Resolution 12 on February 5, 1935. (Minutes of the New Jersey House of Assembly, 1935, pp. 293–295.)

On February 11, 1935, the speaker appointed five members of the house of assembly to this commission. (Minutes of the New Jersey House of Assembly, 1935, p. 325.)

New Jersey Assembly bill No. 391 (1950): An act authorizing the director of the Division of the Budget and Accounting of the Department of the Treasury of the State of New Jersey and the comptroller of the State of New York and their legally authorized representatives to examine the accounts of the Port of New York Authority and to make reports thereon.

This bill was enacted into law as chapter 90 of the session laws of New Jersey, 1950, pages 163, 164. (N.J.S.A. 32: 2–33.)

New Jersey Assembly Joint Resolution 4 (1952): A joint resolution creating a commission to be known as the New Jersey Interstate Facilities Commission to study the subject of interstate tunnels, bridges, and facilities, and the interstate and port authorities and commissions in which New Jersey is interested, particularly in relation to the financing and refinancing of the said facilities and their construction, maintenance, and operation, and also in relation to the benefits obtained, the economies effected and the actual and potential returns from the said facilities, and also in relation to these interstate facilities as a source of revenue to the State and its political subdivisions; to provide for reports and recommendations by the said commission to the Governor and the legislature, and making an appropriation for the expenses of the commission.

New Jersey Assembly Joint Resolution 4 (1952) was introduced on January 21, 1952, by Mr. Musto and referred to the committee on interstate cooperation. (New Jersey Minutes of Assembly, 1952, p. 77.)

On March 24, 1952, Mr. Musto, pursuant to rule 68, gave 24 hours' notice that he would move to relieve the committee on interstate cooperation of further consideration of Assembly Joint Resolution 4. (New Jersey Minutes of Assembly, 1952, p. 501.)

New Jersey Assembly Joint Resolution 3 (1953): Joint resolution creating a commission to be known as the New Jersey Interstate Facilities Commission to study the subject of interstate tunnels, bridges, and facilities and the interstate and port authorities and commissions in which New Jersey is interested, particularly in relation to the financing and refinancing of the said facilities and their construction, maintenance, and operation, and also in relation to the benefits obtained, the economies effected and the actual and potential returns from the said facilities, and also in relation to these interstate facilities as a source of revenue to the State and its political subdivisions; to provide for reports and recommendations by the said commission to the Governor and the legislature and making an appropriation for the expenses of the commission.

Assembly Joint Resolution 3 (1953) was introduced on February 2, 1953, by Mr. Musto and was referred to the committee on the judiciary. (New Jersey Minutes of Assembly, 1953, p. 130.)

On March 25, 1953, Mr. Musto, pursuant to rule 68, gave 24 hours notice that he would move to relieve the committee of judiciary of further consideration of Assembly Joint Resolution 3. (New Jersey Minutes of Assembly, 1953, p. 547.)

NEW YORK

An act creating a temporary commission to investigate the relationship between the port authority and the respective municipalities wherein is situated property of the port authority and particularly the subject of taxing such property; to confer thereon with a similar commission when and if appointed by the State of New Jersey and to report its findings to the legislature; and making an appropriation therefor. (New York Session Laws, 1925, ch. 1, p. 1.)

An act authorizing the comptroller of the State of New York and the comptroller of the State of New Jersey and their legally authorized representatives to examine the accounts of the Port of New York Authority and to make reports thereon. (New York Session Laws, 1929, ch. 648.)

On January 26, 1956, Mr. Composto introduced in the New York Assembly a bill entitled "An act in relation to the examination of the books and accounts of the Port of New York Authority by the State comptroller" (Int. No. 1624), which was read the first time and referred to the committee on ways and means. (New York Assembly Journal, 1956, p. 292, 293.)

On January 26, 1956, Mr. Hults introduced in the New York Senate a bill (Int. No. 1214) entitled "An act in relation to the examination of the books and accounts of the Port of New York Authority by the State comptroller," which was read the first time and by unanimous consent was also read the second time and referred to the committee on finance. (New York Senate Journal, 1956, p. 251.)

On February 7, 1957, Mr. Composto introduced in the New York Assembly a bill (Int. No. 2043) entitled "An act in relation to the examination of the books and accounts of the Port of New York Authority by the State comptroller," which was read the first time and referred to the committee on ways and means. (New York Assembly Journal, 1957, p. 400.)

On March 18, 1957, the New York Senate sent to the assembly for concurrence the following bill entitled "An act in relation to the examination of the books and accounts of the Port of New York Authority by the State comptroller" (No. 1797, Rec. No. 587), which was read the first time and referred to the committee on rules. (New York Assembly Journal, 1957, p. 2473.)

On February 7, 1957, Mr. Hults introduced in the New York Senate a bill (Int. No. 1714) entitled "An act in relation to the examination of the books and accounts of the Port of New York Authority by the State comptroller," which was read the first time and by unanimous consent was also read the second time and referred to the committee on finance. (New York Senate Journal, 1957, p. 376.)

This bill (pr. No. 1797, Int. No. 1714) was passed by the New York Senate on March 18, 1957. Secretary was ordered to deliver this bill to the assembly and request their concurrence therein. (New York Senate Journal, 1957, p. 1922.)

Mr. Speaker, you will note that one of these measures, New Jersey Assembly Joint Resolution 4—1952 was enacted into law. Nevertheless, the New York Port Authority escaped scrutiny. Nothing was done.

In most of the above instances, as far as I can ascertain, the excuse offered by the port authority officials who squelched these efforts, was that the port authority was a Federal agency having to do with Federal matters and therefore was immune from State scrutiny. Although I am now told by port authority spokesmen that I must have been misinformed, that is what I was then told. Today, when Congress seeks to inquire into its operations, the authority, in order to pry itself loose from congressional observation, claims it is a State agency immune from Federal scrutiny. The port authority wants the Congress of the United States to fall between two stools.

Among other matters which I had hoped to clarify in offering my resolution was a question raised by the reiterated charges that one insurance brokerage firm, J. S. Frelinghuysen Corp.—having no connection incidentally with PETER FRELINGHUYSEN, JR., Congressman from New Jersey—has a monopoly on the placement of all insurance upon the assets and operations of the port authority. My bill would have permitted a check upon these charges to ascertain their validity. The brokerage from the placement of all insurance on the port authority's assets and operations would be a tremendous windfall, particularly when one considers that the assets of the port authority total nearly $1 billion and its operations yield yearly a revenue of $100 million.

It would be well to discover whether the port authority does not thus favor one firm as undenied charges seem to establish. If so, the people should know why the port authority thus favors one firm, whether the premiums charged are equitable and fair, and why there has been no competitive bidding on such a large chunk of business. It would be well also to discover with which companies Frelinghuysen places this vast amount of insurance and what the value of the brokerage involved amounts to.

Resolution of these questions becomes even more important when one considers that the cost of all operations of the Triborough Bridge Authority represents only 17 percent of revenues whereas cost of the port authority operations totals 46 percent of revenues. In the face of this comparison one wonders as to the validity and reasonableness of some of the port authority costs.

Yet, the answers to all of these questions will not be forthcoming unless the Celler committee gets the records it seeks. Otherwise these questions will be about as useless to the public at large as a dog's bark.

Should We Let the Caribbean Go Red by Default?

EXTENSION OF REMARKS
OF
HON. DALE ALFORD
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 30, 1960

Mr. ALFORD. Mr. Speaker, a copy of an outstanding and thought-provoking speech by Maj. Gen. R. E. Truman, retired, has just come to my attention. Entitled "Should We Let the Caribbean Go Red by Default?" this address was delivered by General Truman at a meeting of the Military Order of the World Wars in Springfield, Mo., earlier this year.

Under leave to extend my remarks in the Appendix of the RECORD, I am including a copy of this address which I commend to the Members of the House:

SHOULD WE LET THE CARIBBEAN GO RED BY DEFAULT?

(Speech by Maj. Gen. R. E. Truman, retired, Springfield, Mo., before the Military Order of the World Wars, January 28, 1960)

A part of this talk was made before the State convention of the American Legion in Kansas City on July 25, 1959, but it is still as true today as it was then.

My subject today is to be "Should We Let the Caribbean Go Red by Default?" Our answer to this question should be an emphatic "No." Should our Government permit Cuba to go red all of Latin and South America will join in this move.

The island of Cuba, on which U.S. soldiers and sailors gave their lives in 1898 to help Cubans gain their independence from Spain, is now facing a greater danger than at any time in its history. Cuba is now threatened with communism and the present regime is loaded with known card-carrying fellow travelers, many of whom hold the most important positions in the Government. While Fidel Castro claims not to be a Communist, a person is usually judged by the company he keeps.

This island is only 90 miles from the United States. Should the Communists gain full control of the Cuban Government the United States is faced with a severe threat, for this will be the stepping stone to invade all of the countries whose shores are washed by the waters of the Caribbean.

Your speaker is familiar with conditions in Cuba. I was one of the more fortunate foot soldiers that fought before San Juan and Santiago in 1898. Since 1955 Mrs. Truman and I have made one or more trips to Cuba each year at our own expense in an attempt to bring about the restoration of the great battlefield before Santiago. This project invisioned the establishment of this battlefield as a Cuban-American National Monument. We did not spend our time visiting the casinos and night clubs. Most of our time was spent in the Provinces visiting with the people. While I am not unmindful of the criticisms leveled at the previous government, no one could visit Cuba without being impressed with the tremendous building activity and program of public improvements. In March and April of 1959 we again visited Cuba during the aftermath of a revolution and found everything at a virtual standstill. Over 1 million people were reported out of work and more being laid off every day. In 1 week while we were there 5,800 Government employees were dismissed from their jobs, 2,800 of these were schoolteachers who had been teaching English. It was reported at that time English would no longer be taught in the schools, but Russian would be substituted therefor. The population of Cuba is only slightly over 6 million, but the importance of Cuba cannot be measured in these terms alone.

People who had worked hard all of their lives to accumulate some property were being thrown out of their homes with nothing except the clothing on their backs. Bank accounts were being confiscated or frozen. Many who had assisted the Castro regime, financially or otherwise, are now being dispossessed or put in prison. We found the majority of the Cuban people fearful for their lives, even though the average Cuban citizen hates and fears communism.

The abortive invasion of Panama in April of last year originated in Cuba, was headed by Cubans and was an attempt to overthrow the legitimate Panamian Government and the right of the United States to control the Panama Canal. Information about this invasion was obtained while we were in Havanna. This invasion was timed to take place during Fidel Castro's visit to the United States in order that Castro could say he knew nothing about it. Had it not been squelched by the Panamian armed forces, backed up by the Organization of American States, we would have lost the Panama Canal, our vital link between the Atlantic and Pacific Oceans. There have been other incidents of this kind since then and will be more in Latin America which have been and will be sponsored by agents of foreign powers.

During our last visit to Cuba we heard reports that the present regime was going to make the U.S. Government give up our vital naval base at Guantanamo. Should we lose this vital naval base we have lost the naval base required to support our fleet in the Cribbean and the South Atlantic. Besides the millions of dollars the U.S. Government has invested in this base, American business has a huge stake in Cuba. American investments on this island run into the billions of dollars. All of these businesses are being harassed by slow down strikes and sabotage in an effort to take them over. Many thousands of acres of land belonging to Americans has already been confiscated and the owners have not been paid. While Castro calls this an "agrarian reform" program to give landless people land, his regime is setting up large collective farms such as they have in Russia and Red China. We are informed these farms are being supervised and administered by those who have received their training in Russia or Red China. The supervisors of these farms are soldiers, so-called, armed with submachineguns and grenades.

The Cuban Telephone Co., which is almost wholly owned by Americans, and the Cuban Power Co. have both been taken over by Castro's followers and the American managers ousted from their jobs, consequently both concerns are in bad financial difficulties. These are only two of the many American businesses that have been taken over without payment.

It is reported on good authority that most of the top officials in the Castro government are Communists. Osvaldo Dorticos, who is now the president, is said to have been a card-carrying Communist for the past 20 years and was the head of the Communist Party in Cienfuegos prior to being elevated to the presidency. Manuel Urritia, who was first made president, was not a Communist and that was the reason he was removed, your speaker has known him since 1955 when he was a judge in Santiago.

Ernesto "Che" Guevara, who is now the head of the Cuban banking system and military director for the armed forces, is a known Communist from Argentine. He is a murderer and a thief, according to the records, and is the hatchetman for Castro.

Raul Castro, Fidel's brother and the head of the armed forces, was trained in Russia and has always been anti-United States. His wife is more of a fanatic than he is, if that is possible.

The heads of all of the labor organizations in Cuba today are Communist trained.

Armando Hart, minister of education, is well known for his Communist activities, he has set up Marxists schools in every barrio on the island and Russian is now a must in every school to the exclusion of English.

There are 30,000 Chinese in Havana alone, they own and control many of the better stores and shops throughout the island, consequently, Red China has a very potent force at its command in this island.

The greatest mistake made by President Batista was when he pardoned Fidel Castro after he had been convicted and sentenced for leading the attack on the Moncada Barracks at Santiago in 1953. Castro was among those responsible for the riots in Bogota at the time Gen. George Marshall was there on a state mission several years ago.

Senator GEORGE SMATHERS, of Florida, has recommended a naval and air patrol of this entire area be set up by the Organization of American States. The Senator suggests this could be a mobile unit that could protect the threatened area "While the issue was being settled, as it should be, around a conference table."

In most circumstances the conference table is appropriate, but when it appears a Communist beachhead is being attempted in this hemisphere, there can be little to confer about. As stated recently in an editorial in the Saturday Evening Post: "In the end such a challenge would have to be met by this country on the principle that, as the Monroe Doctrine stated it in 1823, we would "Consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety."

Moreover, it is still true that, as the pre-Castro Havana Post stated, "All that stands between any individual state upon which Communist Russia might have designs is the United States of America, without whose military power the target country would be defenseless." Perhaps peace and cooperation in the threatened area would improve if that simple fact were realized.

These are the facts as they are known to be, I am sorry to say the majority of our news media have not been giving the people a true picture of what is and has been happening in Cuba and South America. Castro has now taken over most of the newspapers that have been critical of him and his government and making it harder for us to get a clear picture of conditions as they are.

Battle Against Reds Needs Every Citizen

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 30, 1960

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the San Diego Union, Sunday, August 21, 1960:

BATTLE AGAINST REDS NEEDS EVERY CITIZEN—SUBTLE COMMUNIST DRIVE SEEKS OUT SOFT HEADS, SOFT HEARTS, SOFT WILL

The problems freemen face in combating the global threat of international commu-

nism are shown graphically in the articles, maps, and charts in this special section of the San Diego Union. It is a threat so sweeping and so broadly projected that it will require the enlistment of every man, woman, and child in this Nation to meet it. There must be a response from our people to match experienced leadership.

This newspaper believes that it is later than we think, that the softening up tactics used by international communism are every bit as dangerous as naked and open aggression. Indeed, those who have been fighting communism since it took its first great leap forward in 1933, say that it is "H-hour minus five on the battlefield of the war of minds."

That is why what happens in Venezuela, in Africa, in Tibet, in Cuba, or in any nation where Red ideology has a foothold, is of such personal importance to all of us. There is no deferment for anyone in this bitter fight. All must enlist in the fight against communism; survival itself is at stake.

We are fully aware of the Communists' military threat, of their relentless diplomatic offensive, of their fanatical dedication to the goal of world domination. We know that they have toppled free governments, eroded others to the point of collapse. We know that they are busy on our own doorstep in the Caribbean working themselves into easy missile range of this country.

But the military threat and the diplomatic pressure are obvious to all who read a newspaper, listen to the radio, or watch television. It is what we do not see—the psychological quicksand and the thin ice of apathy—that can destroy us. Communism is like an iceberg; its greatest danger comes from the part that does not show above the surface.

Communism is always close to us. It is never farther away than the complacent citizen among us. It is never farther away than those citizens who do not vote, or the schoolchild who lacks comprehension of and instruction in our history and the mechanics and meaning of our free system. Communism is as close at the teacher who fails to emphasize what is good and fine about this country. It is as near as the politican who would further appeasement, and who questions his Nation's motives, policy, and posture.

Communism cannot succeed against a people who are alert to its stratagems, who understand its workings and its thought processes. The Reds do not want to take us to war if they can subvert us, destroy our will to resist and cause us to rot from the inside out.

In President Eisenhower's words: "Vigilance must still be our watchword. Continuing strength—military, economic, and spiritual—must remain our reliance."

The citizen who enlists in the anti-Communist fight is putting those words into practice.

Lockwasher Manufacturers of the United States Urge Tariff Commission To Limit Foreign Imports Now Menacing the Industry

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 30, 1960

Mr. VAN ZANDT. Mr. Speaker, among the many manufacturers appearing before the U.S. Tariff Commission was Mr. Paul A. Miller, general manager of the Reliance Division of Eaton Manufacturing Co., Cleveland, Ohio, as spokesman for 11 companies which comprise the Helical Lockwasher Manufacturers.

In his statement, Mr. Miller pointed out the destructive effects foreign imports of lockwashers are having on the American manufacturers. Mr. Miller's statement follows:

TESTIMONY BY PAUL A. MILLER AT U.S. TARIFF COMMISSION AND COMMITTEE FOR RECIPROCITY INFORMATION AT WASHINGTON, D.C., AUGUST 30, 1960, ON BEHALF OF HELICAL LOCKWASHER MANUFACTURERS

My name is Paul A. Miller and this testimony is given in regard to tariff paragraph No. 330, "Spiral Nutlocks, and Lockwashers, of Iron or Steel," hereinafter referred to as "Lockwashers." My position is general manager of the Reliance Division of Eaton Manufacturing Co. whose general offices are located in Cleveland, Ohio, with the Reliance Division offices located in Massillon, Ohio.

Appearing with me today at this hearing are representatives of the following companies who have designated me to speak in their behalf: Hobbs Manufacturing Co., Worcester, Mass.; The Mellowes Co., Milwaukee, Wis.; Harper Manufacturing Co., Maumee, Ohio; The Positive Lock Washer Co., Newark, N.J.; George K. Garrett Co., Inc., Philadelphia, Pa.; Butcher & Hart Manufacturing Co., Altoona, Pa.; Philadelphia Steel & Wire Corp., Philadelphia, Pa.; Eaton Manufacturing Co., Reliance Division, Massillón, Ohio; The National Lockwasher Co., of Newark, N.J., and Milwaukee, Wis.; Standard Lockwasher & Manufacturing Co., Inc., Worcester, Mass.; Unit Rail Anchor Corp., Beall Tool Division, East Alton, Ill.

These gentlemen represent the companies who produce 100 percent of the lockwashers manufactured in the United States.

On or about June 17, 1960, the Reliance Division of Eaton Manufacturing Co., as well as other manufacturers of lockwashers, requested to appear at the public hearings of the U.S. Tariff Commission and the Committee for Reciprocity Information. We are concerned about the possibility of this product being placed on any official bargaining list of the General Organization of Tariffs and Trades meeting, referred to as GATT, to be held in the near future.

We intend to present today, specific facts bearing out that the U.S. manufacturers of lockwashers are not only being placed in further jeopardy if additional tariff concessions are granted, but also are in a precarious position because of the present low tariffs.

The lockwasher industry has 11 manufacturers, many of whom have been producing lockwashers for the past 50 to 80 years. In comparison to other industries, we are not a large industry; our combined sales are approximately $10 million annually in the manufacture of iron or steel lockwashers. Inasmuch as our industry is not large, imports of our products do not require large quantities or sales value before imports have a serious effect on the domestic manufacturers. During the many years that the members of the industry have been in business they have on numerous occasions participated and cooperated with members of the Armed Forces and various technical societies in regard to technical information and the supplying of lockwasher products. The past few years show a gradual decline in the use of our products and we present today information relative to our industry's downward trend in production, employment, prices, decline in sales, and increase in imports. We believe that not only is our industry being seriously injured but that it is faced with further serious injury and the possible extinction of many manufacturers if further concessions are made to foreign countries.

The lockwasher industry is affected both directly and indirectly by foreign imports: indirectly by the increasing numbers of imported finished products, such as automobiles, cash registers, machine tools, sewing machines, agricultural equipment and many others. It would be impossible for us to estimate the total loss to the lockwasher industry by reason of these imported finished products. However, we offer this example:

(1) In the calendar year of 1959 the countries of Great Britain, West Germany, Italy, and France exported to the United States 634,207 automobiles. During this same period of time the United States exported to those countries only 2,027 automobiles. In analyzing the visible lockwashers used on a German Ford; namely the Taunus, we find an average of 235 lockwashers per car. Using this average as an example on the 632,180 automobiles imported from these countries on the net, excluding the exports from the United States, a total of 148,562,000 lockwashers were imported through this indirect channel. I believe it important to note that the total effect of imports on the lockwasher industry cannot be measured only by the imports of lockwashers as a separate finished product.

(2) We realize that the United States is still the largest seller and also the largest buyer in the international market and we are sympathetic to our U.S. State Department's objective to support the economies of foreign countries by trade. We are, however, concerned about the large proportion of the increased exports from Western Europe and Japan being consigned to this country. In addition to the new competition offered U.S. products, the upsurge in Western European and Japanese exports produced in 1959 an alltime record of $15.3 billion of foreign imports by the United States.

The Commission knows that the U.S. exports have increased very little from the $15.3 billion in 1947 to the $16.3 billion in 1959, or an increase of 6.5 percent. In comparison imports have increased from $5.7 billion in 1947 to $15.3 billion in 1959, or an increase of 168 percent. We are alarmed about the increase of imports since in our industry the imports are accelerating faster than the average of all imports.

(3) * Year	Imports of spiral nut locks, and lockwashers, of iron and steel	
	Total pounds	Approximate pieces
1955	109,152	50,069,700
1956	647,444	296,992,600
1957	598,521	274,550,900
1958	879,400	403,394,400
1959	1,707,572	783,289,900

Using the 1955 figures as a base, foreign imports on lockwashers have increased 1,464 percent from 1955 through 1959. Statistics show that imports on these products for the first 5 months of 1960 are continuing at an even greater annual volume than in the calendar year of 1959. It is also important to note that the pounds imported do not give the full effect on the industry since nonferrous lockwashers are not included in the import figures. In the first 5 months of 1960 a total of 697,162 pounds have been imported, in comparison to 5 months of 1959 of 580,651 pounds, or an increase of 20 percent. In our opinion the large tonnage of lockwashers imported in 1959 was not due to the recent steel strike since at no time was any manufacturer in short supply of steel for the production of lockwashers.

We would like to point out that one of the members of our industry states that the 1958 imports were approximately 60 per-

cent of their total operation's shipments; in 1959 imports were approximately 90 percent of their operation's shipments; and if the 1960 imports on these products continue it could equal 100 percent of their entire division's shipments for 1960. More important is the fact that on August 1, 1960, the American Nut & Bolt Fastener Co. of Pittsburgh, Pa., was forced to liquidate and their official statement was they could no longer compete with the foreign competition.

Similar information is available that points out the fact that the 1959 imports were equal to the total shipments of some of the industry manufacturers. It is notable that in 1958 the U.S. lockwasher manufacturers' total production decreased 22 percent from the 1957 level, whereas foreign imports on these products increased 46.9 percent for the same period of time.

Lockwasher manufacturers in part are also in the so-called fastener industry. Although the figures that we present today referring to lockwashers are specifically for that product, we believe that unless the rising tide of imports is checked we will experience the same results as the fastener industry.

(4) Statistics show that although the fastener imports were a mere 16 million pounds in 1953, they increased to 34 million pounds in 1957; 70 million pounds in 1959; and are forecasted to exceed 200 million pounds in 1960—this being an increase of 1,150 percent between 1953 and 1960.

During the week of May 25, 1960, the following quantities of screws, bolts, nuts, rivets, and lockwashers were shipped into this country:

Bolts: 853 cases, 140 tons, 634 drums, 280 casks.

Lockwashers: 55 kegs, 24 drums, 16 cases.

Rivets: 213 cases.

Nuts: 1,024 cases, 2,032 kegs, 10 tons, 546 drums.

Screws: 1,265 cases, 121 barrels, 197 drums, 277 kegs.

Gentlemen, the imports for this 1 week of May 25, 1960, on lockwashers only represent the equivalent of 7,594,000 pieces, or 16,554 pounds.

(5) Industrial fastener imports are valued at approximately $300 per ton, in contrast to an estimated valuation of $660 per ton for overall domestic production.

The total imports of the products mentioned exceed 1,000 tons of all types of fasteners during the same week. The seriousness of the foreign imports' impact on domestic production of lockwashers we believe to be true and factual and supported by recent bills introduced in Congress and the appointment of investigating committees. We refer to Mr. VAN ZANDT'S bill, H.R. 9841, introduced in the House of Representatives January 21, 1960; Mr. DIRKSEN'S bill, Senate Joint Resolution 208, introduced in the Senate June 18, 1960; the Foreign Commerce study to the Committee on Interstate and Foreign Commerce, April 25, 1960; Senator KEATING'S bill, S. 2663; and others we may not be aware of.

Although total export figures for the U.S. lockwasher manufacturers are not available, I believe these examples indicate that U.S. exports have all but vanished in the past few years. In the calendar year of 1955 the Reliance Division of Eaton Manufacturing Co. exported 3,513,000 pieces, and in 1959 exports were only 22,000 pieces, or a decrease of 99.4 percent since 1955:

Reliance division exports

	Pieces
1955	3,513,000
1956	2,259,000
1957	531,000
1958	223,000
1959	22,000

In another example, the Butcher & Hart Manufacturing Co. of Altoona, Pa., reports that 20 years ago 25 percent of their sales of lockwashers were exported overseas. Today these markets have all but evaporated; in their opinion principally due to the high duty, the entrance of manufacturers of lockwashers in oversea countries, and the continued increased labor costs in the U.S. industry. The comments from several of the U.S. manufacturers are parallel in regard to exports. Although the export market for these products has practically vanished, we would like to refer to the Foreign Commerce study, a report of which was made April 25, 1960, to the Committee on Interstate and Foreign Commerce, U.S. Senate:

(6) "With the approaching end of artificial quota and exchange restrictions, the tariff wall confronting U.S. exports becomes an even more critical factor in judging our European trade prospects, and the formation of these two trading blocs—comprising together over 85 percent of our transatlantic market—will give an increasingly greater tariff advantage for our chief competitors for a large range of goods. Thus, the American automaker, appliance manufacturer, or machinery exporter who seeks a market in France must compete against German products, for example, whose labor and transport cost advantage will be further magnified by a tariff differential. And as a truly mass market develops, European manufacturers are certain to turn more and more to volume production, thus minimizing the remaining competitive edge which U.S. producers have traditionally enjoyed. It has been estimated that 32 percent of our exports to the common market—mostly industrial goods—will be adversely affected, and another 27 percent—chiefly farm products—may be affected depending upon the treatment which these countries eventually accord to each other's agricultural exports."

We believe as a result of the foreign commerce study, conducted by reputable public and industry officials, that the lockwasher manufacturer can expect little assistance by reason of increased foreign exports.

The lockwasher manufacturers serve major industries such as, the automotive, appliance, farm implement and jobber trade. Although we do not claim the entire reduction in the lockwasher production to be due to foreign imports, imports in 1959 were approximately 5.2 percent of the domestic production, or 1,707,572 pounds, or approximately 783,289,900 pieces.

Let us remember that 5.2 percent is representative of a 1,464-percent increase in a few short years, and unless the trend is reversed imports could very well be 15 to 20 percent of domestic production 2 or 3 years hence. This in our opinion represents a sizable contribution to our decline in sales, employment, and profits.

(7) Total lockwasher products of iron or steel produced in the United States, 1955 through 1959, were:

	Pieces
1955	7,985,218,000
1956	6,441,386,000
1957	5,954,198,000
1958	4,636,116,000
1959	6,595,128,000

Between 1955 and 1959 our total production decreased 1,390,090,000 pieces, or 17.4 percent, while the foreign imports for the same period increased 1,464 percent. It is important to point out that the lockwasher industry is responsible for the employment of employees in other industries. This is by reason of our purchases of basic steel, gas, electricity, supplies, facilities, and other products.

In the calendar year of 1959 the lockwasher industry consumed approximately 33 million pounds, or 16,500 tons of steel. (8) Based on information from the steel industry approximately 16 man-hours are required to produce 1 ton of steel. This represents approximately 264,000 man-hours required to produce the steel for the manufacture of the 1959 volume of lockwashers. (12) In addition to the man-hours to produce the basic steel 679,800 man-hours were required in the fabrication of the product in the lockwasher industry.

Therefore the production of lockwashers was responsible for employment in the amount of 943,800 man-hours for the 1959 volume of production. Converting the 1959 imports of lockwashers into man-hours, or 1,707,572 pounds, or 854 tons, we find that the lockwasher industry lost approximately 35,184 man-hours and the steel producers lost approximately 13,664 man-hours, or a total man-hour loss in the industry of 48,848. Although the man-hours lost in 1959 due to imports may seem relatively small in comparison to some industries, we would like to again point out that this loss of 48,848 man-hours occurred in the space of 5 years and, in effect, has caused the unemployment of over 5 percent of the employees required to produce domestic lockwashers.

The annual sales volume in the industry has decreased from $11,500,000 in 1951 to $10,885,000 in 1959, and so far in 1960 the entire industry has been depressed with lower volume, although imports continue to rise.

During the past 9 years steel prices have risen 64.4 percent, labor wages 49.1 percent, whereas the increase in the selling price of lockwashers has amounted to only 37.1 percent. The industry, as you can see, has not been able to recover increases in labor and raw material through selling prices and this difference has come from profits which today are the lowest in our history. There seems to be a continual discussion on the effect of the low wages paid in producing imported products and we in our industry do not feel that this can or should be ignored. After personally spending 60 days in Europe and visiting some 30 manufacturing companies I do not share the views of many that European industries have less efficient equipment or that productivity is less than that in the U.S. industries.

Several companies that I visited had far more efficient equipment and operations than similar companies in the United States producing the same competitive products. (10) The Chase Manhattan Bank offers the following information, and I quote:

"Although wages are rising faster in Europe than in the United States, they are not likely to reach U.S. levels.

"American manufacturers cannot hope for European competitors' costs to rise to match ours. The French National Institute of Statistics and Economic Studies recently reported Western European hourly wage costs range from 57 cents in Holland to $1.08 in Sweden compared with $2.68 in the United States."

(13) There are indications that oversea producers have significant cost advantages over their American competitors. This is particularly true of those operating in Western Europe where the modern equipment installed since the end of the war is as good or even better than that used in this country. The evidence collected by the National Industrial Conference Board indicates that operating in Western Europe does offer clear cost advantages. Because of the labor cost advantage that foreign producers have, they are able to turn out goods requiring considerable processing by skilled labor at a lower total cost. In the fabricated metals industry, according to the study conducted by the National Industrial Conference Board, production costs are lower in 13 cases, the same in 4 cases, and higher in 4 cases, indicating that in our type of industry costs are predominantly lower. Cost advantages in some instances are due not only to lower wage rates but also to superior producing industries. Some of the war-devastated plants in

Germany, for example, had to be rebuilt completely. This is also true in Japan, who now have facilities to equal the best in U.S. industry.

(9) Sweatshop labor conditions are prevented by law in the United States. The rapid expansion of American foreign trade in recent years in effect permits foreign industries, in which wages and working conditions are below American standards, to compete with domestic production in which wages are significantly higher and in which minimum wages and working conditions are set by the laws of the United States and several States. The U.S. minimum wage law is $1 per hour and pending legislation that could increase the minimum wage to $1.25 an hour provides far greater labor costs than those of foreign manufacturers who produce the same product that we must compete with, although no domestic manufacturer is paying the minimum wage in the United States. The approximate average hourly earnings of the employees in the lockwasher industry in the United States is $2.25 per hour. We cannot expect to compete, even with our advanced technology, in the manufacture of these products with foreign producers paying average wages in Germany of 67 cents an hour; United Kingdom, 80 cents an hour; Belgium, 75 cents an hour; and Japan, 41 cents an hour. The wage differential between foreign competition and U.S. manufacturers is real and has a serious effect on the selling price of domestic manufactured products and the possibility of export.

We offer the following examples as proof of the fact that the low average wages in competitive producing countries permit them to undersell domestic produced lockwashers;

(11) *Selling prices of foreign lock washers against selling prices of domestic lock washers*

[Price per thousand]

SAE medium	Japan	Germany	United States
CARBON			
No. 8	$0.34	$0.56	$0.81
No. 10	.28	.56	.67
¼ inch	.45	.78	1.09
⅜ inch	1.34	2.12	2.18
½ inch	2.64	4.17	4.24

SAE medium	Foreign	United States
STAINLESS		
No. 6	$1.10	$2.10
No. 8	1.15	2.35
No. 10	1.30	2.26
¼ inch	3.05	5.34
5/16 inch	5.15	8.81
⅜ inch	7.35	13.58
½ inch	15.95	23.52

In summary, we would like to repeat that during the past 5 years the imports of lockwashers have increased 1,464 percent to more than 800 tons annually and have all but eliminated the possibility of domestic manufacturers exporting their products. These imports have in effect reduced the employment in our industry more than 5 percent, with a resultant effect on the employment in the steel industry. It has affected the consumption of an already import-effected steel industry, the usage of gas, water, utilities, equipment manufacturers, and others. In our opinion there exists certainty of further serious injury being done to the U.S. manufacturers of lockwashers. We feel that either or both an increase in duty or additional import restrictions are required to avoid further serious injury or even the possible extinction of more domestic manufacturers of these product lines.

We thank the Commission for the opportunity to present our views on this subject and trust that your recommendation will be favorable in behalf of our industry.

Moral Rearmament Program To Fight Communism

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, August 30, 1960

Mr. WILEY. Mr. President, in the struggle for survival and progress, the free world faces the task not only of combating the aggressions of communism against the integrity of nations, but also of strengthening the spirit of man to enable him to best meet the challenges of these complex times.

If our way of life is to survive and the aspirations which we feel are basic to human progress are to reach their highest plateaus—then we must of course defeat this astheistic, materialistic ideology.

In the effort, however, we are—if not ignoring—at least failing to fully utilize one of the great fundamental things which freedom itself has to offer mankind—that is—the opportunity to believe in, and adhere to, those spiritual principles which for each individual have a meaning in life.

These forces—of themselves—are intangible. In the long run of history, however, they may well be the determining factors in the tide of the battle against a materialistic ideology that denies the freedom of the human soul, of individual integrity, and of the right of each man to seek, within an orderly society, a self-determined destiny.

Currently, at Mackinac Island, Mich., men and women—of nearly all faiths—devoted to spiritual principles, from all over the world are meeting to attempt to fashion new tools to fight the Reds and to lift the life of man to new planes of dignity.

In addition to the combating of Red ideology, effort is underway to build a strong foundation upon which to conduct the battles of life against poverty, prejudice, disease, illiteracy, malnutrition and other historical enemies of mankind.

Reflecting endeavors by dedicated individuals to expand their perspective of life; to better understand the struggle between communism and freedom; to extend the spheres of moral influence; and to cut across the lines of prejudice and bigotry that have traditionally obstructed men's effort to work together for common good. I ask unanimous consent to have the articles entitled "MRA (Moral Re-Armament) Fashions New Tools To Fight Reds," from the Milwaukee Journal, printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal, Aug. 28, 1960]

MRA FASHIONS NEW TOOLS TO FIGHT REDS—DEVOTED MACKINAC ISLAND GROUP BELIEVES THAT THE WORLD MUST BE REMADE WITH MORALITY; "WEAPON" A WEEK IS GOAL

(By Richard H. Leonard)

MACKINAC ISLAND, MICH.—Devout men and women who feel that World War III is already here are making this lovely island a launching pad for new "weapons" designed to destroy communism.

These fighters fly the banner of Moral Re-Armament (MRA), an organization started in 1938 for an ambitious crusade: To remake the world by putting honesty, purity, unselfishness and love into the hearts of men and the policies of the nations.

Certain that Russia fully intends to spread communism throughout the world, MRA scoffs at talk of coexistence. It is working urgently to counteract the Communists by telling people to listen to God, strive for freedom and practice brotherhood.

NEWEST WEAPON: MOVIES

Its latest weapons are wide screen, color movies. Produced in the imposing MRA studio on their island arsenal in Lake Huron, these films carrying the MRA message straddle the seas and sweep across continents "We're trying to produce a weapon a week," said Stewart Lancaster, an MRA leader, as he stood before the new studio, incomplete but already in use, at Cedar Point, on the southeast end of the island. "We want to put the free world on the offensive in the war of ideas." "We decided to build the studio so that MRA could be on every movie and TV screen in the free world in a year," said William F. Stubbs, an engineer from Atlanta, Ga., who was general superintendent of the building project.

MEN OF MANY FAITHS

A total of 145 volunteers with this same determination came to Mackinac (pronounced Mackinaw) last winter from 23 nations to build the studio, and many are remaining to produce the films. There are men of many faiths, black men and white men, young men and elderly men, rich men and poor men, Europeans and Asians, Africans and Americans working shoulder to shoulder.

Less than a dozen had ever done construction work. They regard it as no less than a miracle that they were able to build the four-story studio and the three-story tower atop it.

The publicity director for Screen Gems in Hollywood, James Hardiman, recently inspected the main sound stage, 120 by 80 feet, and pronounced it "technically perfect." He said he was not aware of any in America that approached it.

This summer the construction crews have been joined by other believers in MRA—Hollywood actors and actresses, statesmen from near and far, military men, labor leaders, writers, and industrialists are among them—for the annual world assembly at this North American headquarters. (There is another MRA headquarters at Caux, Switzerland.)

A staff of MRA volunteers shares the work in the residence halls, as comfortable as the finest hotels; the main kitchen or other kitchens that turn out special dishes for Asians or Africans, or kosher meals; the dining rooms that can seat 1,200 persons at once and give them service comparable to a first-class restaurant, or the tastefully decorated theater, assembly rooms and lounges overlooking the lake.

The multi-million-dollar headquarters abounds with interesting persons.

In the main kitchen, Mrs. Michael Barrett, granddaughter of David Lloyd George, former British prime minister, cuts up peaches, and Matsuko Kabayama, great-granddaughter of the founder of the Japanese Navy, shells peas.

In a dining room, Miss Frederika Bull, daughter of the Canadian Ambassador to Japan, waits on tables and Mrs. John Hallward, a niece of the British statesman Lord Halifax, guides people to their places.

YOUTHS TRAIN FOR MISSIONS

The great-granddaughter of Cornelius Vanderbilt, Mrs. John Henry Hammond,

entertains at the piano in Great Hall, the main assembly room.

Sharing the physical work has real meaning for youths being trained for MRA missions.

"It's part of the ideological training," said Jerry Nelson, 31, a former University of California at Los Angeles student who is now directing the operation of the film studio. "If you can't wash dishes together, you'll never make out when you sit down at the conference table together."

Everything at MRA headquarters, from the food on the table to the tapestries on the walls, has been acquired through donations of goods, services or cash. The contributions include rugs from the Shah of Iran, rice from the Prime Minister of Thailand, fruit from Japanese-American farmers in California and decorations for the reception room from Prime Minister U Nu of Burma.

GOD CALLED ANSWER

Stated simply, it is the mission of MRA, which was founded by Dr. Frank N. D. Buchman, a Lutheran from Pennsylvania, to rearm the world morally, to convince statesmen and ordinary men everywhere that the directing force of God is the answer to the confusion and strife found in the world today.

Buchman, now 82, is attending the MRA assembly at Caux this summer. He was ordained as a minister and worked as a professor before undertaking moral rearmament on a worldwide scale.

America has a special role in remaking the world because it is so powerful and influential, MRA believes.

MRA operates in several ways:

Some 2,000 full time workers who have been trained at Mackinac and Caux are now carrying around the world the message of honesty, purity, unselfishness and love. They present plays built around this message. They sing it at public performances and on radio and TV. They discuss it in confidential conversations with statesmen and other influential persons.

MRA literature is distributed in great quantity in many languages, and now films are being distributed widely.

Persons who can be effective in helping to remake the world are invited to Mackinac and Caux to relax in a peaceful setting (most MRA people do not smoke or drink), to learn of MRA and to seek answers to problems that divide men and nations. They sit silently in what is known as a "quiet time," and seek guidance from God.

ASSEMBLY STARTS DAY

There is no reveille at headquarters, but at 7:30 a.m. there is an assembly in great hall, a striking circular room shaped like a giant tepee. The walls are supported by huge logs of Norway pine that rise from the wall to wall carpeting to the tip of the cone, almost four stories high.

On a typical morning recently, about 400 men and women from 27 nations filled the folding chairs that faced a panel of half a dozen MRA leaders. One of them, Stewart Lancaster, 34, arose and quoted Premier Khrushchev of the Soviet Union:

"'The choice for America is war or coexistence.' Is that true?"

"No," roared the audience.

Lancaster agreed and spoke briefly on the impossibility of coexistence with communism. He said Russia was using the coexistence theme to lull America into a state where Communists could take over.

A chorus of 30 young men and women from many lands then hurried from the audience and assembled before the seated panel. They sang, beautifully and with determination, "America Needs an Ideology." A piano, bass, and guitar added rhythm and the music swirled up to the apex of the Norway pines.

ACCOMPLISHMENTS TOLD

Then it was time for individuals to take the platform and give personal messages about MRA accomplishments.

A Maori from New Zealand, Rei Jones, led his carpenter crew—which included a newspaperman, a French aristocrat, a wheat farmer and a white South African—onto the stage, where they performed a Maori war dance.

The daughter of Prime Minister Charles Assale of the new Cameron republic of Africa was accompanied by an interpreter. Speaking in French, Bettina Assale said:

"My father was going to launch a war to get independence from the French, but this never came about because I was in a group of students invited to Mackinac. One morning, in my quiet time, the name of my father came to me as one who should come to Mackinac. I wrote to him. It looked impossible. But he came for a weekend and stayed 6 weeks—and changed completely. Later he was invited to the United Nations. People knew he was an enemy of the French and the French delegate had prepared a speech attacking him. But he didn't know my father had changed.

APOLOGIZED TO FRENCH

My father got up and apologized to the French. The French couldn't believe their ears. They asked him to repeat his statement. My father said the world was in terrible confusion because we had forgotten to listen to God.

He said God had put on earth white and black and yellow persons to live together, not to kill each other. The French delegate put away his speech and didn't say a word.

At 9 a.m. it was time for breakfast. After that, the staff went to work. Some acted in the studio. Some washed dishes. Some made beds. Some began making lunch. Some picked up tools to complete the studio.

In the afternoon that was an MRA movie, "Men of Brazil," which told how Communists were defeated on the docks in Brazil. At night there was an MRA play, "The Real News," which told of a newspaper reporter who listened to God and saved a government from collapse.

Many men could be found in widely different roles as the day progressed. Allan Hardie, from South Africa, for instance, sang with the chorus in the morning and then went to work with the carpenter crew. Harold Sack, boss of the concrete crew, had a leading part in the play at night.

Their ability to erect buildings, make movies, sing, act or do seemingly anything that has to be done stems from the force of their conviction to remake the world, many MRA people say.

The idea for a new film, "The Crowning Experience," came from a quiet time. One morning singer Muriel Smith, a Negro who played the leading role in "Carmen Jones" on Broadway, emerged from her quiet time with determination to make a musical motion picture that would be an answer to "Porgy and Bess." She felt that the latter picture had not properly portrayed the Negro.

"The Crowning Experience," starring Muriel Smith, was the result.

Another star of the film is Vernon Slaughter, 38, a Negro housepainter from Detroit who visits Mackinac on weekends. When congratulated on his performance, Slaughter replied, "It was God's guidance. It must have been guidance—I never knew anything about acting." There are no prayers at MRA assemblies. MRA is not a religion, its leaders insist, but a movement for all of mankind interested in fighting communism, fascism or any form of tyranny and making a better world. They say that there is no hierachy, no ritual, no membership cards, no rules. This contention that MRA is not a religion has met with opposition from some Catholics. The bishop of Marquette, Mich., has forbidden members of his diocese to participate in MRA on the grounds that it is a religious movement, with principles contrary to those of the Catholic Church.

CATHOLICS AMONG SUPPORTERS

A commentary prepared at St. John's Seminary, a provincial seminary of the Boston Catholic archdiocese, has stated that any movement is religious "which rests upon the data of divine revelation, and which assumes that God has spoken to men and that He invites them to follow His guidance."

"In urging the members of each religious sect to become united in a common moral life, moral rearmament implies that the dogmatic truths about which religious sects disagree are of no importance," the commentary said.

However, some of the strongest supporters of MRA, including Chancellor Konrad Adenauer of West Germany, are Catholics. There are Catholics at MRA headquarters here and in Switzerland, and MRA has been praised by Catholic writers and Catholic publications on many occasions.

"Because I am a Catholic, because I wish to participate in the realization of the vision of the future of Pope Pius XII, I hope I shall be permitted to be a crusader, to be a fisher of men, under two banners, that of the Catholic church and that of Moral Re-Armament," said Don Salvador Araneta, president of the Order of the Holy Sepulcher in the Philippines.

"The great strength of Moral Re-Armament seems to me to lie in the fact that it is restoring tangible sociological effectiveness to the Christian moral code," wrote Dr. Werner Schollgen, professor of Catholic theology at the University of Bonn.

Dr. Buchman has, of course, always been the leader of MRA. But beyond him the day-to-day operation of MRA is a team effort with decisions being reached at group meetings, leaders say. The leadership changes at Mackinac as new people come into MRA and others leave the island on MRA missions.

Through most of the day and into the night, when the sun sets somewhere behind the Mackinac Bridge and passing ore boats turn on their lights, these leaders are indistinguishable from the hundreds of others on Mackinac who are fighting to build a better world.

The Untried Farm Policy

EXTENSION OF REMARKS

OF

HON. JACKSON E. BETTS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 30, 1960

Mr. BETTS. Mr. Speaker, the following editorial from a recent issue of the Marion Star points up, briefly and clearly, why there has been no legislation for the relief of the farmer. Everyone who has been concerned about the fate of the farmer in the present session of Congress ought to read it:

[From the Marion Star, Aug. 24, 1960]

THE UNTRIED FARM POLICY

For all the ranting that has been done about the farm problem in this (and every) election year, it remained for Secretary Benson to pierce the smokescreen and put his finger on the real trouble.

It is not that the Benson farm policies have failed. The trouble is that the Benson farm policies have never been tried.

The blame for that belongs to Congress, but all Democratic and some Republican Congressmen are making the Secretary the scapegoat. And those Republicans who are helping the Democrats make him the scapegoat are probably the same ones who helped the Democrats sabotage his proposals on Capitol Hill.

The farm situation, after years of dictation from Washington, is a mess so sticky and so murky that nothing short of a total revolution in farm policy will solve it. That was what Secretary Benson had in mind when he took the thankless agriculture post in the Eisenhower Cabinet in 1953.

Recognizing the complexities of the farm problem, he conceived his solution a a whole, with each part coordinated with and dependent upon all the other parts. Executed as a whole, it might have worked. It never got the chance.

For too many farm-belt Congressmen, with their eyes focused on the short-term dilemma of garnering votes, are like amateur whittlers who have no clear idea of what they are going to create when they set to work with the knife. They carve a little here and chip a little there, sticking in a wad of putty when they make a slip that throws the whole thing out of proportion.

When it is finished, it looks like what it is: A hacked-up piece of wood.

That has been the fate of the Benson farm programs in Congress. Not once has Capitol Hill accepted an entire set of Benson proposals aimed at accomplishing an overall goal. Instead, the proposals have been torn apart, distorted, deformed and then put back together in a shape that bore only the slightest resemblance to the Benson program.

But shrewdly, the Congressmen labeled their creation in such a way as to make it appear that Mr. Benson was the author. Thus, they are able to accuse him of instituting policies that have been miserable failures.

The whole performance is an example of legislative provincialism at its worst.

Mr. Benson is not the system's first victim, nor is he likely to be its last. Yet he himself holds out some hope for a change in the future.

He suggests that, despite the Democratic nominee's efforts to detect a rift between the Secretary and Vice President NIXON, the Republican standard bearer's farm policy will be built on the same foundation fostered by Mr. Benson.

If Mr. NIXON can successfully pit his political talents against the provincialism of Capitol Hill, the Secretary's policies may yet be tried and proved correct.

Hon. Leo E. Allen

SPEECH
OF
HON. THOMAS J. O'BRIEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. O'BRIEN of Illinois. Mr. Speaker, LEO ALLEN and I came to Washington after the election of November of 1932 to begin our congressional service as members of the 73d Congress. LEO came as a Republican at a time when Republican Members of the Congress were dropping like frost-bitten leaves, and everyone knows that I am and always have been a Democrat. LEO went through the elections when things were bad for the Republicans and when things were looking up. I want to say that the Republicans were fortunate in having LEO ALLEN on their ticket. I have been fortunate in having LEO ALLEN as a colleague and as a personal friend. However, much we may have differed on partisan matters and on philosophical approaches, when it came to things of concern to Illinois, LEO ALLEN was always on the firing line, just as he was in France as a sergeant of the famed 33d Division in World War I. I shall not forget the help he gave Chicago on the Rules Committee with the Lake Michigan Water Diversion bill. LEO ALLEN has served his district, and the State of Illinois with tireless industry and with great distinction. Illinois is proud that it has contributed to the House of Representatives Speaker Cannon, a Republican, and Speaker Rainey, a Democrat. It is proud that in LEO ALLEN, now voluntarily retiring from public life after years of service it has made a contribution to the Republican leadership of the House, both when his was the majority party and when it was the minority party. There are few Members of Congress who have been privileged to enjoy such distinction. LEO and I, of opposite political faiths, have worked together as warm personal friends for near a quarter of a century, and my warmest good wishes go with him in the years ahead.

Letter From a Veteran

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 30, 1960

Mr. DERWINSKI. Mr. Speaker, all Members of Congress receive a great deal of mail, much of it mass produced and group inspired. I ask leave to insert a letter received from a constituent into the RECORD, without any comment on my part, since I consider it one of the most thought provoking, penetrating, individualistic communications I have received in some time:

AUGUST 25, 1960.

Hon. EDWARD J. DERWINSKI,
House of Representatives,
Washington, D.C.

DEAR SIR: Today I received my Illinois Korean veterans' bonus check for $100. This was a measure I had voted against. I felt that any unnecessary additional tax imposed on the people of Illinois certainly should be vetoed. The generous grand sway of politicians and veterans' pressure groups took any virtue out of this supposed "thank you" by the people of Illinois.

Maybe you can tell me, Mr. DERWINSKI, where I have gone astray. I felt that I had already been thanked by the people of Korea. Maybe I'm in a strange old world which I don't understand. Let me tell you why I feel this way. I was a marine, a machinegun sergeant, who went ashore in the Inchon invasion, through Seoul, around through Wonson, up to Hagaru-ri at the Changjin Reservoir, fought back out in the epic battle, went back to Mason, up to Pohang, and on up the central Korean valleys and mountains to Inje. I was lucky. I came away with a profound sense of satisfaction and many new understandings which have been more than worth the minor physical ailments suffered now. They will always bother me as remembrances of the Korean war. Certainly my experiences are not unique. That you know only too well. What bothers me is the fact that politicians and veterans' groups feel they must reward something as fine as fighting for human freedom with a small monetary reward spread out to thousands of men drafted into the services who had nothing at all to do with the Korean war.

I volunteered for military service because I love my country. I felt I had an obligation, a duty, and I didn't have to be bribed by an indiscriminately administered GI bill. I was due to get out of the Marine Corps, but I volunteered to go to Korea because I hate any kind of tyranny. I know it sounds strange to find an intellectual with strong ideals willing to give up everything nowadays.

When I was discharged, I didn't draw my GI bill for education. I'm an odd ball. I worked my way through both college and graduate school and supported my wife and daughter with my wife's help. Now I teach American history in a south suburban Chicago high school. My salary is only $5,000 a year, yet I'm highly educated; but I'm a nut who believes in this country and in freedom for all people.

Yes, I'm a real crackpot—a young man who loves his country, loves freedom for all the world, and is willing to give his life if needed, yet feels the opportunities of this country are a sufficient inducement.

I think that if our people and our Government could understand my strange thoughts and actions, we would get along much better with the rest of the world. After all, it only wants what we have, the opportunity to live in freedom and to struggle for the rewards of helping each other attain a better life spiritually and materially.

Yes, I love people, all people, and this bonus check for $100 will buy a lot of food and school supplies for the Wonju Sung Ae Orphanage in Korea. Sure, I need the money, but they need it more. This is my way of saying thank you to a backward country and its orphaned children for teaching me so much about love and life. I only wish other Illinois Korean veterans would send their checks to these kids. They need us so much.

Well, Mr. DERWINSKI, what's WRONG, or is it that I have really found out what life is about, and have decided to live in spite of our sloppy, lazy "give me" culture?

Yours truly,

GRAYDON A. LANDAHL.

P.S.—You have my permission to do anything you desire with this letter, including filing it in the wastebasket.

On the Occasion of the 20th Anniversary of the Ukrainian Congress Committee of America

EXTENSION OF REMARKS
OF
HON. PAUL A. FINO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 30, 1960

Mr. FINO. Mr. Speaker, on the occasion of the 20th anniversary of the Ukrainian Congress Committee of America I would like to pay tribute to the Ukrainian patriots who through the cen-

turies have fought the good fight for national independence.

The Ukrainian Congress Committee of America helps us see that the fight is far from over. It serves to remind us of the plight of the dozen captive non-Russian nations. It makes us take a more sober view of the stakes involved in the cold war of today.

The chairman of the committee, Prof. Lev E. Dobriansky, was instrumental in obtaining congressional approval for a Captive Nations Week observance this year. This observance showed Khrushchev that we in the West were aware of the Soviet tyranny which oppresses the captive nations under his sway. It also gave hope to the subject peoples by showing them they were not forgotten. Most importantly, it proved that ideas can pierce through the curtain of terror that encircles the Soviet Union and its satellites.

I would like to offer congratulations to the Ukrainian Congress Committee of America on its anniversary but, in a way, it seems to me as unseemly to congratulate the committee on this occasion as it is to congratulate a man on the anniversary of his mortgage. I would rather save my most joyous congratulations for the day the mortgage is all paid up and burnt, for the day the captive nations have once again taken their rightful place among the family of free nations. In the meantime I wish the committee the very best in its endeavors.

Greetings to the Ukrainian Congress Committee on Its 20th Anniversary

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 30, 1960

Mr. VAN ZANDT. Mr. Speaker I am pleased on this occasion to salute the Ukrainian Congress Committee of America on its 20th Anniversary.

The land and other natural resources of the Ukraine—the tremendously fertile land with acres upon acres of wheat, the rich coal and iron deposits of the Donets River Basin, the power of the Dnieper River which when harnessed helped now to power Soviet industry—all are used to serve the purposes of the Soviet Union. But there remains one invaluable resource of the Ukraine that cannot be harvested, nor extracted, nor harnessed by the brutal conqueror, and that is the people of the Ukraine, a people schooled in adversity, a people rich in national culture, a people of heroic epics. And the Soviet Union now finds, as have all the previous tyrants who have held sway over the Ukrainian people, that nothing can quench the indomitable spirit of independence of the Ukraine.

We can learn much from the history of the Ukrainian people. Their sacrifices perform a valuable service to us. The tribulations they have endured at the hands of Russian imperialism, the horrible massacre at Vinnitsa where the executioners of the hated N.K.V.D. killed 12,000 Ukrainians in cold blood, the violated pledges of the Soviet Union, and the continuing tyranny of Soviet rule over the captive nations—these help us better to see the truth and help us to rid ourselves of delusions about our common enemy.

The Ukrainian Congress Committee of America continually brings these truths to light. It helps keep hope in the hearts of those on both sides of the Iron Curtain that one day Ukrainian freedom, as well as the freedom of all captive nations, will no longer be a phrase and a hope proclaimed by such as I on an anniversary or on some other occasion of sorrowful reminiscence but instead, a living reality.

Upstream Benefits Bill, H.R. 7201

SPEECH

OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 29, 1960

Mr. HEMPHILL. Mr. Speaker, the purpose of my taking this time today was to discuss a piece of legislation which has been needed in this country for many years. Unfortunately, at the very time Congress is hard at work on legislation introduced for the purposes of benefiting this country, selfish interests, which are too often present, misinform the public of this country in order to delay the legislation, defeat it, or serve their own selfish purposes.

The legislation I refer to is H.R. 7201, known as the upstream benefits bill. Many people have asked me about the legislation. I realize it is technical legislation because it deals with the question of firm power, firm energy, hydroelectric physics. It also deals with problems about which both public and private power are concerned. Public and private power, each and both, are today in great need of the hydropower, the river coordination, the reservoir utilization and control, this legislation will produce.

I have been impressed at the opposition to the legislation by those who claim they are trying to do something for their country, because the initial impact of the legislation would have been to provide that insofar as the storage facilities of this country are concerned, the maximum benefits on release of that storage capacity would be required in order that we have the maximum electric power from the available storage and waterpower.

There were some who said: "Well, this is legislation to benefit the private power people." Some people wanted to believe that rather than to look into the facts. Then there were others who said: "Well, you are going to raise the rates of the REA's and other public power people"; and some people wanted to believe that because they were told so. It will not cause a raise in REA rates. The fact of the matter, however, was, is today, and will be tomorrow, whether or not this legislation is passed next year, that this legislation is needed. It is needed by REA's, PUD's, and private power. The report of our committee, which I suppose very few people have read, shows public and private power alike crying for the legislation.

The public utility districts out on the Columbia River are crying for the legislation because under the present law there is no way to make any private power company upstream release the storage in such way that the public utility districts could be guaranteed the firm hydropower it need to meet consumer demands or attract new industry.

In Oklahoma, in the great district of my friend who sits at the debate table, we have a great public power authority desperately needing this legislation.

There were some who said this looks like a windfall to the private power people. When we put the testimony into the record and the statistics into the record they showed that on the Columbia River system alone the United States would benefit $1 million per year. Then the opposition tried to find some other excuse.

Then, I went to my friends from Tennessee realizing some others might go to them and say this would hurt the Tennessee Valley Authority which it will not. I found that in the Tennessee Valley the public and private power interests do just what this bill wants them to do all over the Nation, and I found that there is a great aluminum plant on the Tennessee River system solely because of the fact—solely because of the fact—that public and private power people cooperate and coordinate.

Then I went to some other people who are trying to fight this legislation to try to reason with them because certainly I do not believe I have sponsored anything unreasonable here, and I said: "How about backing this legislation?" One gentleman from Alabama said: "I am just afraid you are going to upset my cost-benefit ratio." So I went to the Department of Engineers of the U.S. Army who are the people who determine the cost-benefit ratio, and asked them about it. They gave me a letter which I gave to interested Alabama people which said that it would not disturb the cost-benefit ratio.

Then, lo and behold, I find that the opposition began to come from headquarters of the National Rural Electric Cooperatives Association. It just so happens I know something about the REA. It is a great authority. REA has meant a lot to this country; it is going to mean a lot in the future. But the people I know who direct the REA's are the farmers and businessmen of my area, people who are not inclined toward any socialism. They are people who recognize that the REA is pretty much indispensable to them. REA did what private power would not do.

It has been very definitely proven that public and private power both need competition. The private power people

need the public power competition, and vice versa, because it keeps them both on their toes. The REA directors over the country are farmers and businessmen who still believe in the private enterprise system. They correctly think of REA as organizations of private citizens to do a public job and they do a magnificent job of providing rural power. But the directors did not object to the legislation. They are neither selfish nor blind. The directors I know are God fearing, honest, independent and patriotic. The opposition did not come from them.

On June 27, 1960, expecting this legislation to come up and hoping it would come up before the end of the session, I put in the record some remarks on H.R. 7201. Included in those remarks were statements and documents to point out to the country at large the fact that certain opposiion had come from the general manager, I believe is the way the gentleman signs himself, of the National Rural Electrical Cooperative Association. This man had not even testified in connection with the legislation. I felt at that time, and I feel today, that if the people in the REA's were told the truth about this legislation they would be for it. The reason I put that statement in the record was because of the fact that on a bill called H.R. 3, which was a bill called the States Rights bill, rights which in the Constitution even though it is not in the hearts of as many men as I would like, this man had taken a certain part. I documented it. In fairness to the gentleman, may I say he wrote me back a letter and said I had not represented him correctly and asked if I would put in the CONGRESSIONAL RECORD a certain letter. I am going to put it in today because, above everything, I want to be fair. He said that my remarks were personal because I had documented a certain situation. Of course, my remarks were not personal. I have never seen any Member of the House feel that way. We just documented what we thought was the truth.

Now, I do not control the REA magazine, and I have no access to it, but I challenge that gentleman right now to put my remarks of June 27 and these remarks in their magazine, if he wants to be fair, because I am putting them both in the CONGRESSIONAL RECORD.

I could go on and say something not only about the fact that the farmers of my district and the farmers in my State believe in States Rights—they do not want the NRECA dabbling in States rights, and when he does dabble he is not representing their views or their wishes.

A number of my homefolk directors were in my office, a number of them, and I said "Is this what you want?" They said, "Heavens, no, deliver us from that sort of thing." Even the manager of the South Carolina co-op came up and said "No, I am a States Righter." I said "I am glad that exists in the hearts of men somewhere."

I could talk about a bill that we voted on the other day involving farmers, a bill in which there was involved the migratory farm proposition. It had to do with the migratory labor. Somebody asked, "Are you going to vote for it?" I said "Of course I am." I saw some of my friends from Arkansas and other places here, and that their farmers are in trouble. Let us go out and vote for them. But I am not going to comment on the fact that once again the manager of the NRECA took a stand against the farmers. He was against that.

The reason I am documenting that today is I am going to tell lots of people about this. If the NRECA is for the rural people of this country, let them begin to speak for the rural people and get their nose out of other people's business and quit trying to block farm legislation to help farmers in other parts of the country, quit trying to block States rights legislation. All of us are for the REA. I have voted for it every chance I had. Now, to have this sort of thing happen is almost beyond my comprehension.

In this particular letter, which I am including out of a sense of fairness, they said they thought I had no personal interest. And, I have none. I have never yet owned one share of power stock in my life. I have never represented a power company as a lawyer, and I do not believe I have ever been in the office of a power company except to pay my light bill. They say that the South Carolina Gas & Electric Co. had an interest in it. I think they did. But, the officers are not in my district. I think they had one dam in my district, but that is not affected by this legislation. Not a soul in my district would be adversely affected. Yet the inference here is that because somebody from South Carolina had asked me to come in and examine the merits that I was protecting their interests. I want you to read it. It is on page 3. This letter I am going to put in to be fair, and I challenge the REA magazine to place this letter of June 27 in their magazine, because they have put me in an unfavorable light.

Here are people who are supposed to be specialists in the power business. I do not claim such erudition. They say that under the present law you can accomplish all that H.R. 7201 seeks to accomplish. If it could be accomplished, read my remarks of June 27, if you do not believe it, and I document in there the letters from the people out West who are suffering.

Here is the situation. Section 10(f) of the Federal Power Act as it presently exists provides that a downstream owner, whether public or private, can require the public upstream owner to release the water in a beneficial way, but if the upstream facility is a private power company, the Government facility cannot make them do it. Now, it is a two-way street, and all we are doing is saying if the private power company operates upstream and they have the capacity to help the downstream public facility by release of water—if the upstream can hold his storage and then release it beneficially, the downstream fellow can demand it if he pays for it. But, it will be distorted. I know as I speak today that this speech will be distorted when it is reported, and I expect it, and I make the speech knowing it.

Then he quotes from certain testimony of a Mr. Williams, which they took out of context or, at least, reported it in a manner to reflect something that I do not actually think it reflected.

Then we went on and talked about the payments under the Federal Power Act. Under this particular legislation we have a provision—and it may sound silly to you—it says that if I furnish you some power that I have not been furnishing you, hydropower, I want you to pay for it; you cannot make me furnish it now, but if I furnish it to you and you can profit by it you have to pay for it. But, this legislation also says that if I have the water and I let you have it, I cannot charge you for it unless you can benefit by it and make a profit on it.

Now, that is a simple premise. It has aroused much propaganda among the REA people. They say they are going to raise your rates. Well, I went into that question very fully with the Federal Power Commission and with the Department of the Interior, which was interested in it, and I got a letter from them dated February 29, 1960, in which it says that costs would be increased by only in accordance with benefits. However, these charges would be a very minimum and only of the magnitude of those now being charged non-Federal interests under section 10(f) of the Federal Power Act. And, looking over here, I find that the United States this year will lose $1 million, and these public utility districts will not get the power or the water they need. They are going to lose and the country at large is going to lose.

Mr. Speaker, I ask unanimous consent to include at this point in my remarks a letter from the Federal Power Commission dated February 29, 1960.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

The letter is as follows:

FEDERAL POWER COMMISSION,
Washington, D.C., February 29, 1960.

Hon. ROBERT W. HEMPHILL,
House of Representatives,
Washington, D.C.

DEAR MR. HEMPHILL: Your inquiry concerning the effect of the headwater-benefit-charge provisions of H.R. 7201, H.R. 7404, and related bills, amending section 10(f) of the Federal Power Act, has come to me. A question naturally arises as to whether under this amendment customers served by Federal powerplants would find their rates increased by reason of the payment by the United States of annual charges for power benefits received corresponding to the annual charges paid by non-Federal power developers.

If the United States is required to pay annual charges for power benefits which it now receives without charge, it is obvious that the operating costs would be correspondingly increased by the amounts so paid. However, these new charges would be very minimal and only of the magnitude of those now being charged non-Federal interests under section 10(f) of the Federal Power Act because there is presently no provision for a guarantee of firm capacity such as would be authorized in the bill. Correlatively, the payments to the United States under section 10(f) at the present time are equally minor in the Pacific Northwest and will continue to be so as long as there is no agreement for storage releases which will add firm ca-

pacity at the downstream powerplants. You understand, I am sure, that the bill would not impose any retroactive obligation upon the United States since as to constructed powerplants of the United States the bill would impose a liability only from the date of its enactment.

One of the major purposes of the new provisions is to assure downstream powerplants of new firm capacity which would be made available by upstream facilities by reason of the water control exercised. This new firm capacity would be obtained at the downstream powerplants without any additional capital investment or additional labor costs.

Also, during some years, the stream flow is so high that practically no storage at these upstream reservoirs is used for downstream power production and the payments to the United States under the present law become relatively insignificant. Under the bill, however, if an agreement is made for payments for firm capacity, as anticipated, the United States would receive payments even during a high-flow year, similar to the high flows in 1958 in the Columbia River system. These firm power payments must, by the very economics of the situation, be greater than would be the costs to the United States for the benefits now being received from non-Federal storage releases.

The only section of the country where the charges paid by the United States would be substantial is in the Columbia River basin where large storage reservoirs are the rule. In the other river basins where there are Federal powerplants, it happens that the power benefits from the storage and release of water at non-Federal reservoirs are not substantial, and, therefore, the payments could not be material.

Specific testimony on these points was given when Mr. Farley (Chief, Division of Licensed Projects, of our Bureau of Power) testified before a subcommittee of the Senate Committee on Interstate and Foreign Commerce on S. 3434 in the 83d Congress, 2d Session, June 9, 1954. He said (hearings, p. 38 et seq.) that the Commission's engineering staff had studied the Columbia River basin with conditions as they would be about 5 years from that time when all of the projects under construction would be completed except The Dalles, which would be practically completed. Under those conditions they estimated that the United States under the terms of the bill then proposed would pay about $300,000 a year to non-Federal owners of reservoirs who would be providing benefits, and that in that area the United States would receive $435,000 a year in payments from non-Federal agencies. None of the $300,000 is presently being paid, of course, but he said that amount is about four-tenths of 1 percent of the revenues of the Bonneville system, or in terms of the cost of kilowatt-hours it would be about one-one-hundredth of a mill. In his opinion, this would be far too small to enter into the rate picture. At the McNary power project, for example, he said that with full operation the payments by the United States would amount to half of 1 percent of the annual cost of the project, which is beyond the realm of accurate estimate.

It is my opinion, therefore, that the United States has far more to gain from the passage of this legislation than it has to receive under the present law. This legislation would not only be of direct financial benefit to the United States, but in providing impetus for more practical cooperation between Federal and non-Federal power interests, the legislation would be of genuine benefit to the economy of the country, especially in the Pacific Northwest where so many of the municipalities and public utility districts are urging its enactment.

Sincerely yours,

WILLARD W. GATCHELL,
General Counsel.

Mr. Speaker, on page 9 of this letter which I am going to include in the RECORD in a spirit of fairness, he says that H.R. 721 is itself a club with which the investor-owned company seeks to subjugate the United States. There was not any testimony like that. There was objection to the legislation, and that is proper. But if that were true, where was the REA when we had the hearings? Where was the gentleman who wrote the letter?

I could go on, but my time has been taken in many instances by gentlemen who needed the time for other purposes.

All we want here is reservoir coordination. The Tennessee Valley boys will tell you that they have it. If it is wrong, tell me why it is wrong. The REA's are not going to suffer. They are going to benefit, because if you take the question or the answer and turn it around, if an REA facility gets some water it has not been able to get, and if it can market that water they can make money for REA. Do you not know that hydropower as compared to steampower can be manufactured at much less cost? And that means that the domestic facility has a generator and a generator is moved by waterpower instead of by steampower and the cost is less. And, of course, the power is marketed at the same price.

I do not know what is wrong with the efficient use of water in this country. I am a little bit appalled at the trend of affairs. We find that the steel companies now are producing only 50 percent of their production and that should be a matter of concern to every American. We find that many firms, businesses, are closing their doors in many areas of the country. And my friend from West Virginia would point out that their people are destitute. Americans either were betrayed by the policies of this Government or were just plain let down. And here we find a situation in which what we are trying to do is to increase the productive capacity of this country.

I know what we are coming to. I know what we are coming to, and it is later than you think. You can talk about socialism all you want to. We are going to come face-to-face with this proposition in this Nation in the not too distant future. Either you want a completely welfare state with every national industry nationalized, or you do not. Either you will return to the private enterprise system which has brought us to greatness or you will let down future generations by saying that we want the Government to do everything for us.

What we have done with this legislation is withdraw it because it did not have any hearings in the Senate. It is going to be presented next year to the Committee on Interstate and Foreign Commerce of the House. We are going to make sure at that time that everybody who wants to be heard will be given a chance to be heard and those who did not come before will get a chance to be heard. We are going to make sure, and we are going to take apart this propaganda about rates, REA rates, and about windfalls. We are going to take that apart. We have had to do it here on the floor.

We are going to ask these people to build up a record. We are going to ask the people of the House to read it, as well as the people of the Senate, and I am satisfied if that be done that this Nation will demand the legislation.

I want to include here my response to a certain premise made to Members of Congress June 1, 1960.

First. The ultimate effects of this bill on the various river basins of the Nation, and the ultimate cost to the Federal Government has never been fully evaluated.

Neither are the ultimate or even the current effects of present section 10(f) of the Federal Power Act known after 40 years of operation under this act.

Second. In the Columbia and certain other river basins, H.R. 7201 would make the Federal Power Commission the "water master" of the river, and would assign to the Commission considerable jurisdiction over operation of river projects—an operating function not suited to the FPC's regulatory responsibilities.

Under the provisions of H.R. 7201 the Federal Power Commission would have the normal authority of the Commission in approving coordination commitments and agreements to determine if they meet the requirements of this bill with respect to coordination, determination of charges and other factors and also act in a reviewing capacity if hearings are involved. These functions of the Commission are not those of a "water master." The determinations as to how coordination is implemented on a day-to-day, month-to-month and year-to-year basis will be up to the utilities involved as is now done under power pooling arrangements in the Northwest and other areas.

Third. This proposed legislation would provide windfall benefits to the Idaho Power Co., the Montana Power Co., and other organizations owning upstream dams built under Federal licenses which, in some cases, already require coordinated operation.

Benefit payments to licensed dams and reservoirs of the Idaho Power Co. and the Montana Power Co. by downstream Federal and non-Federal project owners would be on a cost basis as if the downstream owner also owned the portion of the upstream dam and reservoir contributing the benefit and not on a market value basis. Such payment would, in effect, be for service performed in storing and releasing water, which service is made possible by the upstream dam and reservoir owners investment. It is true that the licenses for headwater projects in some cases have provisions requiring coordination, but such provisions do not state that coordination must be performed in a particular manner or that it is required at the detriment or financial disadvantage of the headwater proj-

ect owner. The bill does not in any way disturb existing license provisions. Thus, the payments for benefits would be for services performed and actually at less than the non-Federal headwater project owners costs. Under such conditions and the actual intent of coordination provisions in existing headwater project licenses it seems misleading to call the payments for benefits windfall benefits. The provisions of section 28 of the Federal Power Act—which remain in full force—are as follows:

That the right to alter, amend, or repeal this act is hereby expressly reserved; but no such alteration, amendment, or repeal shall affect any license theretofore issued under the provisions of this act, or the rights of any licensee thereunder (41 Stat. 1077; 16 U.S.C. 821).

Fourth. H.R. 7201 would require the Federal Government to make upstream benefit payments on the basis of private investment and operating costs, while the non-Federal project owner would make payments on the basis of lower cost Federal financing, giving the non-Federal owner a 3-to-1 advantage over the Federal Government in payments for comparable benefits.

This statement ignores the fact that payments for coordination benefits under the bill as proposed for amendment would be on the basis that the Federal Government would pay for such benefits received by it at the Government's costs and the non-Federal project owner would pay the Federal Government on the basis of the non-Federal project owner's higher costs. Thus, the Government would pay for such benefits received by it at a lower rate than the non-Federal project owner would pay for such benefits as they would receive from the Government.

Fifth. H.R. 7201 could place downstream project owners, Federal and non-Federal, at a disadvantage to upstream project owners, since subsection (c) on page 4 permits the upstream owner to file a plan of coordinated operation, on his own terms, with the FPC such plan to go into effect unless disapproved by FPC within 6 months. It is highly unlikely that FPC would make a full and equitable study of such a complicated river basin operating plan within 6 months, especially since the Commission has spent years studying similar problems under the present section 10(f) of the Federal Power Act and still has not resolved all questions.

The factual situation would be that a coordination plan of a headwater project owner must assure benefits to the downstream project owners and under such conditions the downstream owner should pay for these assured benefits. With the requirement in the bill that a coordination plan provide for production of optimum firm and secondary power at the downstream plants and with the headwater reservoir owner having right of ownership and operation of his project it is unrealistic to consider an arrangement for a downstream owner to initiate a coordinated operation with a headwater owner. The headwater owner owns and controls his storage and his right of ownership is not compatable with having another project owner require him to conform to a particular method of operation. In addition, it is at least questionable whether a downstream owner or anyone else can legally force a reservoir owner to operate in any particular way.

With reference to the question raised over the 6-month provision for approval of a coordination committment by the FPC, it is very important that prolonged delays not be permitted in bringing about actual coordinated operation after a commitment is filed with the Commission. Any increase in the 6-month period for approval could possibly result in correspondingly longer delays in bringing coordination plans into operation. Also the determinations that must be made by the Commission within the 6-month period are only those relating to the proper form of the committment and plan and do not relate to the more complex and time consuming determinations of annual charges and so forth.

Mr. Speaker, H.R. 7201 is good legislation. It is good for the present of this country and it is going to be good for the future.

Mr. Speaker, I ask unanimous consent to include at this point in my remarks a letter directed to me from the Federal Power Commission dated June 30, 1960; a letter directed to me by Howard C. Elmore, assistant manager of Public Utility District No. 1 of Chelan County, Wenatchee, Wash., dated August 18, 1960, including a copy of a letter, written by Mr. Kirby Billingsley, manager of Public Utility District No. 1 of Chelan County to Mr. Gus Norwood, executive secretary, Northwest Public Power Association, Vancouver, Wash., and another letter by the same gentleman dated August 18, 1960, addressed to our distinguished colleague from California [Mr. Moss]; also a letter dated July 25, 1960 sent to me by Clyde T. Ellis, general manager of the National Rural Electric Cooperative Association.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

The letters referred to follow:

FEDERAL POWER COMMISSION,
Washington, June 30, 1960.

Hon. ROBERT W. HEMPHILL,
House of Representatives,
Washington, D.C.

DEAR MR. HEMPHILL: This will confirm your telephonic conversation with Mr. Stewart P. Crum on June 30, 1960, relative to H.R. 7201—a bill to provide for the comprehensive operation of hydroelectric power resources of the United States, and for other purposes.

I understand that you have informed Mr. Crum the authorized Federal Millers Ferry and Jones Bluff projects on the Alabama-Coosa River are marginal from an economic point of view, and that objections have been raised to H.R. 7201 because these two projects would be rendered economically infeasible if they are assessed for benefits provided by privately-owned headwater improvements.

At present the Alabama Power Co. owns and operates three hydroelectric developments, namely its Lay, Mitchell, and Jordan developments, under Federal Power Commission license on the Alabama-Coosa River upstream from the aforementioned Federal projects. These three privately-owned plants provide pondage only, and it is believed that they would provide little, if any, benefits to the two downstream Federal projects. Consequently, the three existing privately-owned plants would have practically no beneficial effect on the two downstream Federal projects.

The Alabama Power Co. now has under construction its Weiss hydroelectric development with 135,000 acre-feet of usable storage capacity on the Alabama-Coosa River upstream from the Federal Millers Ferry and Jones Bluff. Construction of the Alabama Power Co.'s Kelly Creek development with 56,000 acre-feet of usable storage capacity, also on the Alabama-Coosa River upstream from the two Federal projects, is scheduled to be commenced this year. The Weiss and Kelly Creek projects are licensed by the Federal Power Commission. Owing to the regulatory storage capacity to be provided by the two projects, it is believed that they will provide benefits to the two downstream Federal projects. If this is the case, under H.R. 7201 the Federal projects would be required to make payments for headwater benefits. However, such payments would not be more in any case than the value of the benefits received. In other words, the margin of benefits over costs would not in any case be reduced. Hence, construction of the Weiss and Kelly Creek storage projects could not adversely affect the economic feasibility of the downstream Federal projects, and would probably improve their feasibility.

Sincerely yours,

HARRY J. TRAINOR,
Executive Director.

PUBLIC UTILITY DISTRICT NO. 1
OF CHELAN COUNTY,
Wenatchee, Wash., August 18, 1960.

Hon. ROBERT HEMPHILL,
Congress of the United States,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN: For your information in support of H.R. 7201, forwarded herewith are copies of two letters which I believe are self-explanatory and which might be of some value to you. One letter is dated August 1, 1960, and was directed by us to Mr. Gus Norwood, executive secretary of the Northwest Public Power Association. The other letter, dated August 18, 1960, is directed to Congressman JOHN MOSS. Both of these letters attempt to answer unjustified and erroneous statements concerning H.R. 7201.

Reports reach us here that the bill will be debated in Congress on August 23. As you know, we are vitally interested in this legislation, however, if there is a possibility that the bill might be defeated in Congress we believe it would be better strategy to not consider the bill during the remaining period of this session. It appears to us that the possibility of getting favorable action on this legislation during the next session of Congress would be greatly improved if we did not have a record of a defeated bill in the House. We know, of course, that you will exercise your best judgment in this regard.

Your interest and cooperation is most appreciated.

Very truly yours,

HOWARD C. ELMORE,
Assistant Manager.

PUBLIC UTILITY DISTRICT NO. 1
OF CHELAN COUNTY,
Wenatchee, Wash., August 1, 1960.

Mr. GUS NORWOOD,
Executive Secretary, Northwest Public Power Association, Vancouver, Wash.

DEAR GUS: You have forwarded me a copy of your letter to WALT HORAN, dated July 26, 1960, in which you quote a statement by WALT as published in a recent issue of the Wenatchee Daily World with reference to

H.R. 7201. WALT should, of course, defend his own statements; however, since you have sent a copy of your letter to me, I am taking the opportunity to comment.

You disagree with WALT's statement that "We're wasting on the Columbia River a great many dollars for failure to properly regulate the flow of the river." You state that "This surprised me so much that I double checked with BPA. They cannot point out any basis for the report. They do not know where or how any dollars are being wasted; neither do I." You further state that we may know where this report got started.

We believe you should know well where the report got started.

In our work on this legislation, among the first questions raised during and following the congressional hearings last year by you and others was for specific information on what this legislation could be expected to bring about in the way of payments to the Federal Government and payments to the non-Federal reservoir owners for benefits created downstream as a result of the form of coordinated operation visualized by the proponents of the legislation. To answer this question, you are aware that Jack Stevens prepared a study, the results of which were given wide distribution and made a part of the Senate committee hearings on S. 1782.

In spite of the fact that you and others have questioned the study, no one, to my knowledge, including Bonneville, has come up with any analysis that could be used to factually or conclusively disprove its assumptions or conclusions. One of the conclusions of the study, as you know, was that if coordinated operations worked as envisaged in the legislation the Federal Government would receive in payments something over $900,000 annually over and above any payments that the Government would be required to make. This would be revenue to the Government which is not now received.

Perhaps someone can come up with an analysis that shows a different answer, but until a different answer is produced with some basis in fact, it seems to me that from the evidence at hand it is entirely correct to say that something is going to waste on the Columbia River.

It does not seem right that you should claim ignorance on this point since the Stevens study as well as considerations in the legislation, have been worked out to answer critical questions and accusations as to the possible bad results that might be expected from the legislation and you have considerable familiarity with all this.

We have never made any "pie in the sky" claims for this legislation. Many thing have been said for and against it that are entirely misleading. We are only concerned with the fundamentals involved and these, we think, are properly being taken care of.

One is that we now have to operate our plants on the Columbia River without assurance in advance as to how headwater storage is to be released for use in our plants. Our resulting benefits from headwater storage on such a basis are, in effect, uncoordinated as far as we are concerned and do not have firm power value. We want coordination on a firm basis to produce firm power and we see no reason why the Federal Government should not desire and be willing to commit itself to operate on such a basis for its own benefit and for the benefit of others, including ourselves. Existing section 10(f) of the Federal Power Act is entirely inconsistent with this principle, since it recognizes only payment for benefits received on an after-the-fact basis without assurance in advance that they will be received downstream, and, of course, there is the further barrier to full coordination in the exclusion of payment by the Federal Government for benefits received from non-Federal reservoirs.

Secondly, we do not know what our costs are or what they will be for these indefinite after-the-fact benefits. We need to know what we can expect to pay for firm benefits.

Thirdly, we believe that there is real urgency in doing something legislatively on this matter because of the impending Canadian Treaty settlement which could, we think, adversely affect the type of legislation that might be passed if such legislation does not precede the treaty settlement. The Canadian Treaty will make it imperative that powerplants in the U.S. Columbia River Basin be coordinated in dealing with Canada and that we have legislation making it possible to carry out this on an overall basis, and also to establish a principle for payment for benefits created by U.S. Federal and non-Federal reservoirs.

We have discussed these various points with you and in your presence many times, and it seems somewhat redundant and repetitious to restate them here. However, repetition seems to be necessary to answer questions being raised against H.R. 7201 that have the appearance of being deliberate, misleading attempts to give the legislation some sinister purpose and associate those of us working on it with some sort of a plot to increase the cost of Bonneville power or take the Federal Government out of the power business or some other such ridiculous ideas.

Sincerely,

KIRBY BILLINGSLEY,
Manager.

PUBLIC UTILITY DISTRICT NO. 1
OF CHELAN COUNTY,
Wenatchee, Wash., August 18, 1960.

Hon. JOHN E. MOSS,
Member of Congress,
Old House Office Building,
Washington, D.C.

DEAR CONGRESSMAN MOSS: Your letter of July 20, 1960, to Mr. Alex Radin, executive director of the American Public Power Association has been forwarded by Mr. Radin to members of the association, including ourselves. We believe it our obligation to answer the erroneous and unjust statements and claims made therein discrediting needed legislation that is definitely in the public interest. The bill, H.R. 7201, now before Congress provides for needed amendment to the Federal Power Act. To make certain that the intent of the bill is clearly expressed Congressman HEMPHILL is proposing two amendments to the bill. One of these amendments would add the optimum production of secondary energy as well as firm energy to the requirements for coordinated operation of hydroplants and the other would provide more specific language on the determination of how payments for storage and coordination benefits shall be determined. It is with these proposed amendments in mind that we wish to comment on your letter, however, even without consideration of these amendments our comments in most instances are valid.

Your letter states that H.R. 7201 would amend the Federal Power Act and would "drastically impair some of the best and most firmly established principles of this Nation's water resources." We believe that amendment of the Federal Power Act with reference to section 10(f) is essential. Also, contrary to your contention the bill is intended to operate and would operate in accordance with the best principles of water resource development. The people of the Nation are certainly entitled to the greatest possible use of the Nation's water resources. They are so entitled whether the manmade improvements on our waterways are constructed by the Federal Government, by local governmental agencies, or by privately financed corporations. When the Federal Water Power Act was enacted in 1920, the value and necessity of operating facilities in concert, with such facilities under multiple ownership, were not clearly recognized. The Congress did provide certain standards for the construction of such facilities by licensees, but it did not take the additional necessary step of providing the machinery and proper inducement to procure the now essential coordinated operation of such facilities. H.R. 7201 will provide the additional step of bringing about the sensible and proper operation of existing projects so that all of the people may realize the full benefit that a river allows regardless of who owns the projects. It does not in any way violate principles of water resource development or conservation; it implements those principles by providing for sensible operating procedures and a fair distribution of the benefits of such operation to all consumers.

An accusation is also made that the bill would provide a subsidy to private utilities and a drain on the Federal treasury. This is completely erroneous. Perhaps the best explanation of the true facts relating to the effect the bill would have on the Federal Government and on private utilities is to be found in the CONGRESSIONAL RECORD of June 27, 1960, at page 13568. On the Columbia River system alone the Federal Government will receive a net payment of some $927,000 per year. There is no possibility of the United States realizing such an income under the present law and practices on the Columbia River. On the other hand, the private utilities on the Columbia River, as a group, would receive a net payment of less than $50,000 per year for the benefits they provide. Additionally, the general counsel for the Federal Power Commission testified that the Federal Government has far more to gain than it has to lose under H.R. 7201. Further still, the Federal Government is not responsible for any sum of money under this bill because every cost involved is an obligation of the rate payers. Therefore, the tendency of the bill is either to reduce Federal power rates or bring money into the Treasury of the United States. It cannot by any stretch of the imagination result in a subsidy; it is a revenue measure.

You claim that the bill would impair multiple purpose functions of Federal projects and that it would require the Federal Government to pay more than others for the same or lesser benefits. Neither of these claims has any foundation in truth.

The Department of the Interior at one time considered that the bill did not contain sufficient specific language to insure that Federal project functions other than power production would remain unimpaired. The Department, together with the Federal Power Commission, drafted language to provide such assurance. Such language was accepted by the House Committee and is now in the bill. Also, the sponsors and proponents of the legislation have at all times in the development of language in the bill intended that the Federal Government would in no case be required to pay more than it receives for equal benefits. You must certainly be aware that the proponents, rather than those who claim the Government would pay more than others, have prepared an amendment to the bill to make it specific and clear that no such situation shall result. It is important to note that the opponents of this bill, who have apparently advised you in this matter, have studiously avoided admitting the obvious—that the Government will in fact receive a higher payment per unit of benefit conferred than it will be required to pay for benefits conferred on the Government.

You criticize the procedure for bringing about coordinated operation in the event that contractual negotiations fail. The bill does not allow an upstream owner to bind a downstream owner to do anything at all merely by the act of filing a plan. The

commitment filed by the upstream owner (such as the Bonneville Power Administration which is by far the most important upstream owner in the Columbia River system) merely (a) obligates such upstream owner to operate his facility for the overall good of the region, and (b) activates the legal machinery by which the Federal Government, acting through the Federal Power Commission, decides what amount, if any, of the appropriate reservoir costs must be contributed by each downstream owner for the benefits conferred upon him. Thus the upstream owner can only impose an obligation on himself. The Federal Government imposes the obligation on downstream owners in accordance with standards set forth in the bill.

Under present law, the Federal Government, acting through the Federal Power Commission, is charged with the responsibility of establishing charges which must be paid by downstream owners. However, under present law, a reservoir owner may be entitled to a federally enforced contribution even though he does nothing whatsoever except operate his facility to meet his own needs. Under H.R. 7201, a reservoir owner is not entitled to receive any contribution from downstream owners and consumers unless and until he obligates himself to operate for the best benefit of the unit composed of himself and everyone who will be expected to contribute to his costs. In either event, the Federal Government establishes the amount, if any, of the payments to be made. It is true that, under present law, the Federal Government is not required to make any contribution to the costs of a reservoir owner even though the Government receives benefits made possible through the expenditure of such costs. Under H.R. 7201 the Federal Government would be required to make its fair contribution to such costs. The reasons and necessity for including the Federal Government within the purview of this obligation is conclusively shown by the testimony in the hearings on this bill, and the official position of affected Federal agency is in support of this basic principle.

Your letter also alleges that neither the Commission nor the downstream owners have any meaningful opportunity to challenge the coordination terms. We are sure that the Congress will realize that the interested parties have the right to challenge the proceedings at each stage. The Federal Power Commission has the power to throw out the whole plan and the additional power and responsibility to establish the amount and allocation of all required payments.

You state that the bill is anti-conservation in its impact. This position, like most of the other matters contained in your letter, is a repetition of statements made in the minority report of the House Committee. You apparently base this position on the same reasoning contained in the minority report, i.e., the erroneous assumption that the Federal Government will be required to pay more than it receives per unit of benefit. The error in this assumption has been discussed above. Suffice it to say that the whole intent and effect of the bill is to secure the maximum in perpetual benefits for every affected consumer and prevent the existing waste of hydroelectric power resources. It is a conservation measure in every sense. We agree that it is essential that the full meaning of this bill be brought to the attention of the American people. For that reason we are writing you in answer to your July 20, 1960 letter, with the hope that the erroneous conceptions about H.R. 7201 that are being formed might be viewed in the light of the facts and the true conditions.

We are writing you in behalf of the public utility districts of Grant County, Pend Oreille County, Douglas County and our own district. All of these districts have generating plants on the Columbia River or its tributaries either in operation, under construction or being engineered. We are speaking from the standpoint of our particular interest which is not in any way contrary to the broad public interest even though some individuals and organizations have attempted to make our position appear as a selfish one.

We sincerely hope this will be of value to you in taking a constructive look at the problem.

Very truly yours,

KIRBY BILLINGSLEY,
Manager.

NATIONAL RURAL ELECTRIC COOPERATIVE ASSOCIATION,
Washington, D.C., July 25, 1960.

Hon. ROBERT W. HEMPHILL,
U.S. House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN HEMPHILL: This is in further reference to your statement in the CONGRESSIONAL RECORD of June 27, 1960, concerning the position of this association on H.R. 7201. As you know, I sent you a telegram on June 28, 1960, regarding the personal references you had made about me in your statement. However, 30 days later, I have had no response from you. The text of the telegram was as follows:

"I have just read your speech entitled, 'Upstream Benefit Bill,' in June 27 CONGRESSIONAL RECORD, and shall write you next week on issues involved.

"Meantime, however, I hope you will reconsider, in light of all the facts, your references to my 'individual honesty and integrity.' I cannot bring myself to believe any Member of Congress would make such unwarranted accusation against a citizen, no matter how divergent the views held on the issues, if all the facts had been clear to you.

"You charged me with falsification and what amounts to perjury, and you did this on basis of an obvious misreading of the record. You have done me a great and grave injustice and I hope your honesty and fairness will impel you to correct it and place a statement to that effect in the CONGRESSIONAL RECORD.

"Apparently you confuse the sequence of the communications you quote on page 13561 of the RECORD. Actually you omit one date altogether. Here is what I did and when:

"June 16: I signed a letter to five Congressmen in regard to what I feared would be effect of H.R. 3 on rural electrification program.

"June 25: I sent a wire to Mr. Shiflet, stating in part: 'I did write five Members of the House in the hope of getting an amendment to exclude matters affecting the rural electrification program from H.R. 3 and such an amendment was offered on the floor.'

"July 9: (note this is the next month) I wrote Congressman PILCHER, stating in part: 'Prior to the day on which the letter was written, I personally had no knowledge of the contents or purpose of H.R. 3.' The letter here referred to was the June 16 letter.

"It is apparent from this sequence there are no inconsistencies. My statement to Mr. Shiflet was true and my statement to Mr. PILCHER was true. There is no inconsistency.

"Nor is there basis for your statement: 'There is no question but what Mr. Ellis has impeached himself because these two statements from his own mouth are inconsistent. One of these statements must be false. For in one he contends he did send the letter in the hope of getting an amendment. Now he says he had no personal knowledge of that bill. If he had no personal knowledge, how could he have been hoping for an amendment?'

"To leave no doubt, I did not say that I: 'Had no personal knowledge of that bill.' But that: "Prior to the day on which the letter (June 16) was written I personally had no knowledge of the contents or purpose of H.R. 3.' On that day, June 16, the matter first came to my attention and on the same day I signed the letter to the five Congressmen.

"This is a very serious charge to make without any basis. You say: 'Had these inconsistent statements been made under oath in a court of justice, the consequences would be serious indeed.' I shall be glad to make the same statements under oath, for they are true.

"You are aware, I know, that in a court of law the accused is always given equal opportunity to present his case with equal force and effect. For such simple justice I am forced to depend upon your honesty and fairness. I value my character as much as I am sure you do yours and I appeal to you for the justice of which you speak by correcting the RECORD.

"Regards."

I still appeal to you to correct your incorrect and unfair statements in the CONGRESSIONAL RECORD.

Now, as to the issues involved in H.R. 7201, I would like to discuss various points that seem significant to us.

As you know, the membership of this association passed resolution No. E-14 at our 1960 annual meeting in St. Louis opposing H.R. 7201. The NRECA staff is bound by this resolution to employ all ethical means to persuade Congress that it would be in the national interest to defeat H.R. 7201.

You may recall that during the morning of February 25, 1960, at the very time our membership was considering the 1960 annual meeting resolutions, I took a call from you at the stage telephone in Kiel Auditorium, St. Louis. You asked us to contact you immediately upon our return to Washington concerning H.R. 7201.

On Tuesday morning March 1, 1960, Mr. Dick Dell, Mr. Charles A. Robinson, Jr., and I called at your office. You expressly informed us that you had no personal interest in this bill, and were supporting its passage to help those members of the House committee who were directly interested in it. We explained our opposition to you. But not until we read the printed hearings later did we learn of the interest of the South Carolina Electric & Gas Co. And not until we read your House floor speech did we learn of your strong feeling toward the national organization of the rural electric cooperatives.

H.R. 7201 provides, among other things, that the owner of a headwater storage dam may go to the Federal Power Commission, and, upon agreeing to coordinate its project with downstream projects for a 5-year period, require the Commission to assess against all downstream projects annual charges payable to the headwater project owner for such benefits as its coordination may confer upon downstream projects. The bill, however, does not confer parallel procedural rights on the downstream owner resulting from its coordination with the upstream project. However, the downstream owner cannot require that FPC order a headwater licensee to operate his project on a coordinated basis. We suggested to you during our March 1 meeting that our opposition to the bill might be lessened, though not eliminated, were it amended to allow downstream Federal projects to require coordinated operation of the privately owned headwater projects. We talked particularly of the Columbia Basin.

You then said that you had no desire to impose any inequity on Federal projects. You asked us to prepare a suitable amendment in this regard.

Within 3 days we wrote to you and enclosed the requested amendment. To this day we have received no reply, nor have we any in-

dication that our amendment was ever considered by you or by anyone else.

Benefits to South Carolina Electric & Gas Co. You accuse us of misrepresenting the facts in stating that Mr. Arthur Williams, Jr., vice president and general counsel of the South Carolina Electric & Gas Co., indicated in his testimony that H.R. 7201 would benefit his company by some $1 million per year.

In support of our assertion in this particular, I submit the following information:

On July 27, 1959, Mr. Williams appeared before the House subcommittee and testified in part as follows:

"South Carolina Electric & Gas Co. has maintained on this river, for approximately 50 years, a hydroelectric facility known as the Stevens Creek plant. Shortly after World War II, the United States, acting through the Army Engineers, completed a dam and hydroelectric generating station a few miles upstream at Clark Hill.

"Acting in accordance with authority embodied in the act, and permit from the Secretary of War issued pursuant thereto, under which Stevens Creek Dam was constructed, the Federal Power Commission moved in 1952 to assess the annual charge to be paid by our company to the United States for alleged benefits derived by Stevens Creek plant from the Clark Hill facility.

"We were then informed by representatives of the Federal Power Commission that their studies over the period 1950–1956 inclusive, had resulted in these significant figures: (a) The benefit to Stevens Creek from Clark Hill amounted to $247,498; (b) the benefit from Stevens Crek to Clark Hill amounted to $318,000; and (c) the damage to Stevens Creek from Clark Hill amounted to $896,900.

"Thus, it can be seen that if either the damages resulting to our facility from the operation of the Federal facility, or the benefits from our facility to the Federal facility could have been used in computing the annual charge, we would have been relieved of paying anything" (p. 80, House hearings).

I submit that the following three conclusions can be reasonably drawn from the above statement: (1) That the Stevens Creek project is 50 years old, that probably a major portion of it has already been amortized by the company's customers and that any payments large or small, annual or otherwise, made by the Federal Government to Stevens Creek would, therefore, constitute windfall profits. (2) That in claiming payments under H.R. 7201, South Carolina Electric & Gas Co. intends to rely upon the $896,900 damages which it asserts have been imposed on Stevens Creek as a result of Clark Hill operation.

And, concerning damages, it appears to us that the bill is entirely susceptible to just such interpretation as evidenced by the language of the Minority Report appearing at page 60 of House Report 1414, 85th Congress, 2d session, which reads as follows:

"(e) Furthermore the language of subsection (d) authorizing the Commission to allow the owner of a hydroelectric facility suffering a detriment 'such offset charges assessed under subsection (b) of this section as the Commission shall deem to be equitable,' is quite unclear. There is no provision in subsection (b) for the assessment of offset charges."

(3) That the benefits and detriments mentioned by Mr. Williams which amount to over $1 million will be claimed on an annual basis. And I call your attention to the words "annual charge" used by Mr. Williams himself as mentioned above.

It is quite true that subsequent to his direct testimony before the House subcommittee, the following exchange took place between Congressman AVERY of Kansas and Mr. Williams at page 85 of the House hearings:

"Mr. AVERY. I think I understand the general premise you are working on. It is a little hard for me; I am trying to understand with no larger reservoir than that how you could account for that large damage. That is an annual damage?

"Mr. WILLIAMS. No, sir. That is over a 6-year period, from 1950 to 1956.

"Mr. AVERY. That would make a little difference then.

"Mr. WILLIAMS. The other two I had put annual. Those are the figures I corrected orally. I should have made it even stronger by saying that all three of those figures represent the time during the Federal Power Commission study which covered 1950–56." (There is no record of any oral correction.)

"Mr. AVERY. In other words that is a 6-year loss.

"Mr. WILLIAMS. That is correct, sir.

"Mr. AVERY. Mr. Chairman I have one more question. I do not seem to find it right now.

"Mr. WILLIAMS. Let me say this: That a 6-year period, during the first couple of years they were still filling the reservoir up at Clark Hill. I think they started in 1950.

"Mr. AVERY. So actually it would amount to a 4-year period.

"Mr. WILLIAMS. I think that is correct."

Therefore, during the House hearings Mr. Williams stated under questioning that the period involved might be 6 years or 4 years despite his direct testimony to the effect that it was 1 year.

But, the very next day, on July 28, 1959, Mr. Williams appeared before the Senate subcommittee. We must presume that he is a competent lawyer and had well in mind his cross-examination on the preceding day. Nonetheless, during his presentation to the Senate subcommittee, he made exactly the same direct presentation, talked of "computing the annual charge," and never mentioned a 4- or 6-year period.

When he completed his Senate testimony on "annual charges," Senator THURMOND of South Carolina asked:

"Senator THURMOND. Do you have anything else you would like to say in addition?

"Mr. WILLIAMS. Nothing, except to thank you for your courtesy and time, Senator."

This presentation I think is significant in view of the fact that at the present time, South Carolina Electric & Gas Co. and the Department of the Interior are engaged in an FPC proceeding to determine the benefits and detriments which flow between Clark Hill and Stevens Creek by way of reservoir storage and reregulation.

It is our opinion that Mr. Williams wants to play both sides of the street so that his company will not be precluded from claiming the largest possible payments.

And, any person who happened to read the Senate hearings, and not the House hearings, would draw only one conclusion; that the company intends to claim $1 million per year under the bill.

Will H.R. 7201 increase hydro capacity? You state at page 13563 of the CONGRESSIONAL RECORD on June 27, 1960, that:

"The net effect of the proposal is to assure 1,268,000 kilowatts of firm energy from coordinated use of the different owners' storage on the Columbia River system, alone, as an example, a large part of which could not otherwise be guaranteed firm."

This figure seems to have increased substantially during the past year. During the House hearings held on July 16, 1959, Congressman LEE METCALF, of Montana, who introduced the bill, stated:

"When Senator MURRAY introduced S. 1782, which is an identical bill, he said that the mere passage of this legislation would create from 500,000 to a million extra kilowatts of firm power without building another dam on the Columbia."

Your figure of 1,268,000 kilowatts is apparently taken from a letter submitted to the Senate committee by Mr. Jack Stevens, a consulting engineer of Seattle, Wash., who testified in support of the legislation. This letter, which appears in the printed record of the Senate hearings at page 36, is dated March 18, 1960; 8 months after conclusion of the hearings. There was, therefore, no opportunity to cross examine Mr. Stevens nor was any Federal agency asked to comment on his estimate. No comparable figure was presented orally by Mr. Stevens during his personal appearance before either the Senate or House subcommittee.

And, immediately after Congressman METCALF's assertion before the House subcommittee to the effect that H.R. 7201 would create 500,000 kilowatts in the Columbia Basin, we wrote a letter to him asking that he apprise us of the assumption upon which his assertion was based. To this day we have not been favored with a reply. A copy of our letter to Congressman METCALF is attached.

As a matter of fact a major portion of any possible increase that would be made available by this legislation in the Columbia Basin is already realized by the existing Northwest Power Pool. Assistant Secretary Aandahl testified on H.R. 7201 before the House subcommittee in part as follows:

"And I might say that the pooled operation on the Columbia River which is not reduced to contract but is voluntary day-to-day operation carries sizable elements of coordinated operation. In fact, that is the secret to the fact that by voluntary coordinated operation without a contract, the usable kilowatts in the Pacific Northwest, I believe, are now close to a million above what they would be if there were independent operation of each of the facilities by their respective owners" (p. 152, House hearings).

Therefore, it appears to me that the benefits which you ascribe to the affect of H.R. 7201 on the Columbia River system are very much too large and are based upon biased testimony submitted after the hearings were concluded.

Costs to the Government under the proposed legislation. At page 13568 of the RECORD of June 27, 1960, you refer to a table thereon contained, which purports to indicate that under H.R. 7201 the United States would realize a net income of $927,700 from headwater benefit payments in the Columbia Basin. This figure, and the chart upon which it is based, were submitted to the Senate committee on October 9, 1959, more than 8 months after the conclusion of that committee's hearings by Mr. Jack Stevens to whom I have previously referred. Mr. Stevens' estimates, in our opinion, simply do not agree with the facts.

Under the Federal Power Act as it now stands, the Commission is empowered to assess against downstream non-Federal projects annual charges related to the benefits conferred upon such projects by Federal dams. The record shows that for the Columbia River Basin the Federal Government was paid a total of $21,100 in 1957, $15,900 in 1958, and $53,400 in 1959. This is indeed a far cry from the $927,700 net income which Mr. Stevens claims will be available under H.R. 7201, although that legislation must, it seems to me, reduce rather than increase the income to the Federal Government in view of the fact that the Federal Government is not chargeable with any downstream benefit liability at the present time.

H.R. 7201, as it now stands, would require the Federal Government, in making headwater benefit payments to non-Federal projects, to pay three times what a non-Federal project would pay a Federal project under the same circumstances. This is true simply because investor-owned fixed charges are about three times Federal fixed charges. In this regard you commented in a letter of June 25, 1960, which you sent to Members of Congress:

"Clarifying amendments will be offered to H.R. 7201 on the floor which will assure that the Federal Government will pay no more than the cost of furnishing such storage had it owned all of the storage in the river basin. These amendments will satisfy the major objection of the American Public Power Association in its resolution of May 5, 1960."

This declaration is, you must concede, an admission that H.R. 7201 is deficient in its present form. Whether the proposed amendments, which you say will be offered on the floor, would resolve this problem, we do not know. I have not seen copies of the proposed amendments, and I suggest, that in view of our extensive interest in the legislation, we might have been given a chance to help formulate and/or review them.

Can H.R. 7201 actually achieve its purpose? You say at page 13562 of the aforementioned RECORD that:

"The essence of the solution is that Federal, private, and non-Federal public reservoirs be operated in concert to assure the most efficient utilization of water for power generation. As things now stand, each dam owner is free to operate his reservoir without regard to the needs of the other owners' downstream dams, and there is now no real inducement to operate in any other way."

The Federal power marketing agencies already possess full authority to enter into voluntary coordination contracts with other hydroelectric project owners. In fact, this has been done to a great extent in the Northwest. In those cases where no coordination agreement has been executed, it is, in large measure, I think, due to the fact that the investor-owned utility companies demand a lion's share of the benefits, leaving only the dregs to the Federal Government.

Under such circumstances, the Federal agency involved understandably refuses to enter into a voluntary contract. This bill purports to confer authority on the headwater owner to have the Federal Power Commission require that the downstream Federal projects coordinate facilities and pay for such headwater benefits as may be bestowed upon them by the upstream owner. To secure this domination of the Federal Government, the upstream owner need only agree to provide such benefits for 5 years. H.R. 7201 is, therefore, a club with which the investor-owned companies seek to subjugate the United States.

If I may be very presumptuous, let me say that there is, however, in my mind, very serious doubt as to whether this bill could actually achieve this purpose at all as a matter of law. The Federal Power Commission has authority to require its licensees to operate their projects in coordination with all other hydroelectric projects in their river basins. This requirement has been placed in some licenses. But it has been omitted from many.

Article 6 of the Federal Power Act provides that licenses may be altered only on mutual agreement of the licensee and the Commission. And article 28 of the act, which reserves to Congress the right to amend the act, expressly states that no amendment of the act shall affect any license theretofore issued or the rights of any licensee thereunder. Moreover, section 2 of H.R. 7201 provides that—

"Nothing contained in this act shall in any matter affect any right * * * which vested or accrued prior to the effective date of this act."

To now require a licensed project to operate on a coordinated basis against the owner's consent would certainly "affect" its vested right, except where the license already requires such operation. So also would an order to a licensed project to pay for benefits from upstream projects on a basis different than that prescribed in the present law.

Accordingly, I submit that by its very terms H.R. 7201 could not apply to many existing licensees without their consent. It follows very logically that the bill could not achieve full coordination.

If the bill could not achieve full coordination, and yet would impose on the Federal Government headwater benefit liability, it would be nothing more than a subsidy for non-Federal headwater project owners.

In closing we want again to emphasize our strong conviction that enactment of this bill will saddle the rural electric systems and their consumer members with extra costs in tribute to the power companies, costs that will go on and on for decades. Furthermore, we are convinced that passage of this bill will destroy or impair the feasibility of Federal hydro projects.

Congressman, we value very highly your support of the rural electrification program in Congress, and your record of generally supporting the Federal wholesale power program. We wish you could agree with the rural electric systems on H.R. 7201. We hope that our disagreement on this issue can be maintained on a professional level because neither NRECA nor you can possibly gain by either attacking the motivation or personal character of the other.

I, of course, have no access to the CONGRESSIONAL RECORD, and cannot, therefore publish my arguments against H.R. 7201 in the same way that you published your support of it. In fairness, therefore, I request you to place this letter in the RECORD.

Again, may I say we appreciate your record of support in the past and we hope we can be privileged to work with you in the future. We stand ready to talk with you further on H.R. 7201 at your convenience.

Since Congress is in recess, I am sending a carbon copy of this letter to your office in South Carolina.

Sincerely,

CLYDE T. ELLIS,
General Manager.

NATIONAL RURAL ELECTRIC COOPERATIVE ASSOCIATION,
Washington, D.C., July 30, 1959.

Hon. LEE METCALF,
U.S. House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN METCALF: I was very much interested in your recent testimony in support of H.R. 7201 before the Subcommittee on Communications and Power of the House Committee on Interstate and Foreign Commerce.

As you probably know, we have not taken a position on this legislation this year. We are, however, attempting to work up a study of the effects to be anticipated should H.R. 7201 or similar legislation be enacted. As I recall, you stated that one such effect would be the development of an additional 500,000 kilowatts of power on the Columbia River system without the necessity of building additional dams. I feel certain that our study of this matter would be substantially expedited if you would be willing to make available to us the basic data which you used in the preparation of your testimony.

Sincerely,

RICHARD A. DELL,
Director, Legislation and Research Department.

Twentieth Anniversiary of the Ukrainian Congress Committee

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 30, 1960

Mrs. GRIFFITHS. Mr. Speaker, this fall 2½ million Americans of Ukrainian descent will be celebrating the 20th anniversary of the founding of the Ukrainian Congress Committee of America. I am honored and pleased to extend my wholehearted and sincere congratulations to this nationwide organization with its dedicated principles and ideals.

In the early twenties the political as well as cultural and economic independence of the Ukraine was subject to Red Russian imperialism. As one of the captive nations which was forced into the spurious federation called the Union of Soviet Socialist Republics, the Ukraine's large population of non-Russian people was submerged under the despotic and dictatorial rule of the Bolsheviks. Her land, rich with coal and manganese, became important captive resources under the Red flag.

By means of a psychopolitical and propagandistic machine during the cold war the Communist leaders have manufactured a myth of unity which they say encompasses their country. Only the reality of truth, with which the Ukrainian Congress Committee attempts to imbue the hearts and minds of these captive people, will smash this legend.

For 20 years the Ukrainian Congress has sought in a purely educational manner to lead their organization in the task of serving these Ukrainian people who do not wish to be a part of the U.S.S.R. It is to this strong and faithful group which reflects the thoughts and sentiments of its followers that I express my appreciation for its heroic objectives toward independence, freedom and justice for the 42 million people that embody the Ukraine as well as for its efforts toward the liberation of all the non-Russian nations of the U.S.S.R.

Tribute to Gustave Fast

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 30, 1960

Mr. GARMATZ. Mr. Speaker, as the Representative of a district largely industrial in nature, I deem it highly appropriate to call to the attention of my colleagues that 1960 is the 75th anniversary of the birth year of an inventive genius whose work in the advancement of applied science was one of the most important factors in the development of industry in America, and indeed, the world, as we know it today.

I refer to the late Gustave Fast, a native of Sweden, whose adult life for the most part was spent in the city of Baltimore and in the State of Maryland. Mr. Fast came to America just 50 years ago after thorough training as an engineer. His father before him was a noted engineer and was decorated by the Swedish Government with the Distinguished Service Medal for his engineering work.

It was while living in Baltimore in 1918 that Mr. Fast designed a power-transmission coupling that was to make him world famous and which made it pos-

sible for industry—then in the throes of changing from steam to electric power and from belt to direct driven machinery—to make the transition and go on to undreamed of heights of productivity.

Until Fast invented his coupling, industry had been plagued with breakdowns in the vital link between electrical motors and the machinery they were designed to drive. No device then known could long hold up under the stresses and strains of the inevitable misalinement between the driving and driven members. The devices of the time were made of flexible materials and fell victim to metal fatigue.

The late Ernest Von Hartz, writing in the Baltimore Sun, described the situation in this fashion:

With the birth of the machine age, industry found itself confronted with the problem of misalinement between the directly connected shafts of driven and driving machinery.

The problem was not so serious in the early days with relatively slow speed machinery, but with present-day high-speed machinery this condition became acute. It was found, for instance, to be a physical impossibility to connect two shafts in perfect alinement. The misalinement caused wear on the bearings of the two shafts and other mechanical deficiencies in the machines.

To compensate for errors of alinement, flexible couplings were employed. But the solution itself was subject to limitations. Flexible materials when subjected to constant bending and twisting suffer from fatigue and failure.

Failure, of course, meant shutting down the machinery and replacing the coupling.

Gustave Fast already had made a name for himself with the invention of reducing gears and power drives used on Navy patrol boats in World War I when he concentrated on the design of a power coupling that would be flexible, yet be made of nonflexible materials that would last indefinitely.

As Mr. Von Hartz wrote:

The coupling invented by Mr. Fast solved this problem in that it does not depend for its flexibility on flexible materials. It is all metal and is based on a simple mathematical principle taking the physical form of completely meshing two spur gears with internal gears of an oil-encasing floating sleeves. Thus the entire power is transmitted through an oil film, which effectively separates the metal surfaces. This is the important discovery by Fast, for it has reduced to a practical minimum the wear on couplings.

Just how well Fast succeeded is history. Nearly 1 million Fast's couplings have been manufactured by the Bartlett Hayward Plant of Koppers Co., Inc., in Baltimore, and placed in use throughout the world, notably in the steel industry. At any given moment of a working day the Fast's couplings in use transmit more than a billion horsepower and from the very first ones manufactured they have outlasted the machinery they connect.

Mr. Fast died nearly 15 years ago but his couplings installed 30 and 35 years ago are still functioning perfectly in their original installations.

Most noteworthy of all, however, is the fact that that Fast's couplings manufactured today are basically the same coupling this great Swedish-American engineer designed more than 40 years ago. What a tribute to his genius it is that in all these years no one has been able to improve his invention.

Mr. Speaker, it is my sincere belief that American industry and the world owe much to Gustave Fast. He was honored in 1928 as the recipient of the John Price Wetherill Medal from the Franklin Institute of the State of Pennsylvania in recognition of his mechanical genius, but this adopted son of Maryland should not be forgotten.

A Tribute to John J. Pershing

EXTENSION OF REMARKS
OF
HON. W. R. HULL, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 30, 1960

Mr. HULL. Mr. Speaker, Americans will pay homage to the memory of the great American soldier, General of the Armies John J. Pershing, on the 100th anniversary of his birth, September 13.

An unusually fine article concerning General Pershing appeared in the August issue of the American Legion magazine written by James Warner Bellah, and under leave to extend my remarks, I include this article:

A TRIBUTE TO JOHN J. PERSHING, GENERAL OF THE ARMIES OF THE UNITED STATES

(By James Warner Bellah)

A century has passed since Pershing's birth and more than a decade since his death, and yet his memory stands tall in the land and his name rings firm in the historical echo of his times. By an odd twist of circumstance, General Pershing is the First War; and the proof of the thesis lies in the fact that after 43 years no other general's name comes readily to mind when that war is mentioned. Try to think of one.

Not so in other wars. On September 13, 1860, Pershing was born into the opening fanfare of the golden age of Grant, Lee, Sherman, and Jackson—four names that will stand linked forever before the fact of the preserved Union. Again, he grew to manhood and as a junior officer served under Generals Nelson A. Miles, Adna R. Chaffee, John M. Schofield, and William R. Shafter—four men indelibly associated with the march of America across the shrinking plains, to Cuba and the Orient while the 19th century wound its way out and the Century of Great Wars came upon us.

In the First World War, however, Pershing played his part without a peer—standing alone in his time as history would have it, with no one to share the responsibility and no one to share the fame. Can you even recall offhand who the Chief of Staff was in 1917? 1918?

Then Pershing grew very old and lived on to see the new men come to flower—MacArthur and Eisenhower, Patton and Stilwell, all of whom he ranked by an active commission as General of the Armies by act of Congress as long as he lived—but there was no old wife in Pershing. Never once did he attempt to put a finger in the New War pie. Like a wise old soldier, he spent the Second War quietly fading away.

In 1944, when I was in Walter Reed, the Old Man was 84 years old and he had been living up on top of the hospital in his specially built set of quarters for the 3 years that the Second War had been going on. The Old War was pretty far back in history in those days; yet it was a mark of the stature of Pershing that his nurses scheduled receiving hours each morning for seldom less than three or four people who felt impelled, by right of past association and present desire, to call and pay their respects on passing through Washington. It was a mark of the gallantry that never dies in old cavalrymen—one supposes—that the comelier nurses would grin at times when they came off duty and rub themselves where they swore they'd been pinched.

Old War have I said? Pershing's earliest toddler memories were of Southern bushwhackers raiding his hometown of Laclede, Mo., and shooting up the village. He was 5 years old when Lee surrendered at Appomattox Court House. Thirteen years before the Spanish-American War began, Cadet Captain Pershing commanded the Corps of Cadets when it crossed the Hudson from West Point to Garrison to stand at "present arms" parallel to the New York Central tracks while the funeral train of Ulysses Simpson Grant rolled slowly by.

A group photograph of officers of the 6th U.S. Cavalry, taken on the club steps at Fort Bayard, N. Mex., shows among them the very junior Second Lieutenant Pershing, a blue kepi cocked on his light, blond head and a kid's grin on his face. For 4 years in the desert Southwest he was on active service against the last of the Apaches. In 1890 he helped put down one of the final Sioux uprisings in the Dakotas when he was in command of the Indian Scouts at Pine Ridge and as an officer of the 10th Cavalry. In the Spanish-American War he wangled his way back into the 10th, foregoing infinitely better appointments on the staff. He served throughout the Santiago Campaign fighting at San Juan Hill, where he was cited for gallantry July 1, 1898, and subsequently awarded the Silver Star Medal—and was, in the words of his commanding general, S. M. B. Young, "the coolest man under fire that I ever saw."

In September of 1899 he was ordered to the Philippines and as a junior-ranking captain, he commanded three successful expeditions against the Moros of Mindanao. They were mixed commands, varying in strength from a battalion to a brigade. The expert handling of these expeditions had its Washington repercussions, and in 1903 Mr. Elihu Root, Secretary of War in Theodore Roosevelt's Cabinet and the father of the Command and General Staff School at Fort Leavenworth, went on record to Avery D. Andrews: "If your friend Pershing doesn't look out, he will find himself in the brigadier general class very soon." In the face of the angry mutter of Regular Army "soreheadism" when Pershing was eventually jumped four grades on the promotion list, it is only decent to state that the Secretary of War made this remark 3 years before Captain Pershing met Senator Warren's daughter and 4 years before they were married.

In 1905 Captain Pershing was appointed military attaché to Japan and spent most of his tour of duty in Manchuria observing the Russo-Japanese War. In 1906—the Army still being hogtied by officer promotion within regiments so that the bright young men were buried deep in the system if they didn't resign—President Roosevelt promoted the 45-year-old Captain Pershing over the heads of 862 senior officers, and he was commissioned a brigadier general. There was ample precedent. President McKinley caused Leonard Wood's promotion from captain in the Medical Corps to line stars, and Tasker H. Bliss was promoted to brigadier from his majority in the Commissary Department. Frederick Dent Grant and Frederick Funston were promoted to brigadier in the Regular Army from volunteer commissions only, and Capt. Albert L.

Mills of the regular cavalry was promoted to brigadier general just ahead of Pershing. All of those promotions were made in the considered interest of Army efficiency at a time when the service was moribund by passively dug-in rank, living on the inertia of seniority.

General Pershing went back to the Philippine in 1906 as Commander of the Department of Mindanao and Governor of the Moro Province—and served as such until 1913.

In 1914 he was sent to the seething Mexican border in command of a brigade with headquarters at El Paso, leaving his wife, Frances Warren Pershing, and his four young children—Helen 9, Anne 7, Warren 6, and Mary 3—in quarters at the Presidio of San Francisco. His appalling personal tragedy occurred there on August 27, 1915, when the quarters were destroyed by fire and Mrs. Pershing and the three little girls died in the holocaust. Only his son, Warren, survived. What that will do to a man, no other man can ever say. At best a part of him must seal itself up forever, wherein the dead never grow up nor grow older, only the broken heart that holds them in lonely anguish.

That tragedy was a part of the great and natural dignity of Pershing, of which Heywood Broun once wrote: "They will never call him Papa Pershing." It was dignity that impelled only the long-service soldiers to call him "Black Jack" as a subtle accolade, not in derogation. Pershing never married again.

In 1916 he organized and commanded the Mexican Punitive Expedition, a combined arms force of 10,000 men that penetrated 350 miles into Mexico and broke up Pancho Villa's armed revolutionaries, severely wounding the bandit himself. There is a prophetic photograph surviving from those days: a picture taken at Nogales of Generals Obregon and Villa with Brig. Gen. John J. Pershing. Behind Pershing and to his left stands his aide—1st Lt. George S. Patton, Jr.

Old war indeed. Before Pershing fought World War I, he had seen or fought in nine older wars. The story of Pershing's appointment to the command of the AEF is not generally known, for it is loosely assumed that he fell into it naturally when Gen. Frederick Funston died. But this is not so. Newton D. Baker, Wilson's Secretary of War, had had no previous acquaintance with Army matters before his Cabinet appointment. The Chief of Staff in 1917 was Maj. Gen. Hugh L. Scott, a distinguished and capable officer but in his 64th year—facing statutory retirement in a matter of months. When it became imperative to select a field commander, Secretary Baker took home the complete records of all general officers and spent 48 almost-continuous hours examining them minutely against each other. Like a machine records selection, the answer came out "Pershing"; and, like the first America's Cup race, "There was no second" on the record.

There was no American Expeditionary Force for him to command either. The Regular Army ran to possibly 25,000 men all told in 1917. There was no divisional organization except for the hastily scratched-up 1st Division, elements of which (the 7th Field Artillery) were still landing in St. Nazaire in early July, 3 months after the declaration of war. There was no Reserve as we know it today except the officers' training camps of the Plattsburg movement. And to attend one of these camps prior to the declaration of war a man had to buy his own uniforms, pay for his food and incidentals, and transport himself to and from his home. For which he received no pay, but he could get an Officers' Reserve Corps commission and wear ORC in bronze on his collar. The National Guard outfits in most States were separate-company deals that quite possibly had never trained in regiment. And a long enough time had elapsed since the Spanish-American War to allow State politics—rather than qualification—to creep back into the selection of senior officers.

From this potential, General Pershing had the unenviable task of producing a completely organized army. Given a free hand fortunately, he was able in 18 months to produce an integrated fighting force of 2 million men and to fight it himself as field commander in the last few months of the war.

Nobody but the Regular Army ever trained progressively for war in the United States before World War I, and the Regulars never trained on the mass scale that European armies had been going in for since the days of Frederick the Great. If war came, you just blithely sprang to arms overnight in the fatuous but golden words of William Jennings Bryan—never mind what arms you sprang to, or who fed you breakfast the next morning.

Pershing was not an overnight springer. Having previously commanded four brigade-sized expeditions in hostile territory, he was a respecter of the supply and administration which come before all glory and without which there is no "military diversion of fighting a war"—again, Frederick the Great. Furthermore, Pershing was a trainer from away back. The two-sided manpower was modestly born in his time into U.S. Army doctrine at Fort Bayard, N. Mex., in 1886 when Gen. Nelson A. Miles instituted raiding games wherein one cavalry troop took the part of raiding Apaches and the others countered their efforts. Pershing carried the method to the Philippines—building training into pyramidal structure from the individual, through unit to combined arms—and then physically opposed maneuvers of two counterbodies of troops.

As sketchily as they began in the National Army of 1917–18 (some men were overseas 2 weeks after induction and division-sized units sailed in a matter of a few hours after closing on each other at the port), the methods and training programs that Pershing inaugurated early in 1917 were the beginnings of the masterfully refined mobilization training plan of 1941–45 that produced the finest, most farflung army the world has ever seen.

It has been said of Pershing that his greatest contribution to the war effort was to maintain the intactitude of the U.S. Army—to keep it a unified force in France. Pershing had no army when he landed in France, but he did have uncoordinated units as a basis of making one and he did have American manpower flowing in behind him. But no general in command of an expeditionary force—on paper at first but in increasing fact as the months unrolled—is going to let it slip away from him. Certainly a man of Pershing's military record was not going to allow himself to be euchred out of the tools of his trade.

It is true that by 1917 the French and the British had a strong proprietary interest in that war and were fed up to the teeth with it. And when Pershing was in London on his way to Paris in June of 1917, he was officially asked, with British blandness, whether his place would be with the British or the French or between the two. Pershing made a diplomatic reply. He said that the President had not yet made a final decision. Again, it was ambassadorial-level opinion that the French had periods of great war weariness and that there was a very real danger that they might get tired and stop—that they might quit and make a separate peace with Germany. Therefore, the psychological effect of Pershing's arrival in France was immeasurable.

But there was a natural trap a lesser man might have fallen into. This was a modern war that the British, French, and Germans had developed and the United States was a newcomer to it. So much of a stranger that we were landing with obsolescent 3-inch field pieces—shortly to be replaced by the French 75 mm. and supplemented at corps by G.P.F. We were landing in felt campaign hats, shortly to be replaced by the British tin hat. Almost at once, the outward and visible profile of our troops was beginning to change. There was an insidiousness in this natural process of modernizing items of our supply from the established Allied sources of supply. But there was a war in progress. So what better places to train for it than in the rear of established French and British sectors? Once you borrow facilities from another army, there is grave danger you may be absorbed.

Pershing did allocate some American troops on a rotational basis to the Toul sector for combat training with the British, and some to the French. His pilots (who were Signal Corps officers in those days because the observation balloons McClellan had used at the Seven Days' Battle before Richmond in 1862 had telegraph instruments in them and army communications is a Signal Corps function, what else?) were trained individually with the Royal Flying Corps (the Royal Air Force after April of 1918), with the Italians, and with the French. It would have been easy to have made the combat-training trade permanent and to have lost the identity of the entire Army.

Pershing took this chance coldly, made it work to his own ends of training and producing an eventually planned army of 3 million men. It took time, it took patience and intestinal fortitude, and it did almost try the Allied patience to breaking when the German attack of the 21st of March 1918 began to go through them to a point of near-disaster. This is where the greatness of Pershing stands tall before the world. With his plans not yet at fruition but with almost a year absorbed by them, he offered to place his entire force at the disposal of Marshal Foch. The crisis passed in late summer; and at St. Mihiel in September the first all-United States operation was launched, followed by the Meuse-Argonne offensive under Pershing's personal command—and the resulting record is inscribed in the bronze of history forever. The impartial verdict from the British viewpoint: "If the attainment of its aims was slow and more costly than had been expected, Pershing had accepted the actual battleground (the Meuse-Argonne) in deference to his allies and against his own preference for a blow at Metz. Even so, it is probable that he underrated the difficulties of breaking through a strongly organized trench system, as well as the causes that had sapped the offensive spirit of the French. He had a Grant-like ruthlessness, similarly lacking the personal magnetism which leads men to lay down their lives gladly, but he had the character which compels men not only to die but to work, grumbling perhaps but respecting him." (B. H. Liddel-Hart.)

American soldiers as a class do not readily come by a love for their generals. There is no record of any great soldier love for Washington. For a time the army of the Potomac seems to have had a deep emotional enthusiasm for General McClellan—but for no one else who commanded. The 3d Army did not love Patton; they respected him. Nobody loved Stilwell; they admired him for the odds he was up against. The exception is the love that the army of northern Virginia had for Lee.

Therefore, the rule must be that if the character of an American general officer commands respect, that is enough for him to function on. You can hate his guts; but if you will follow him, that is the mission. The converse is that most of us have to employ a compensatory gut-hating technique in the face of strong character at a crisis

of history—for there stands the antithesis of our own weakness.

On a maneuver in the Philippines years before World War I, the final movement of the problem called for a bridge across a swollen river. An Engineer lieutenant reported to Brigadier General Pershing that because of high water it was impossible even to get the first rope across the river. Pershing's answer was: "I never ask the impossible of any officer or soldier of my command. When you get an order, you must find a way to execute it. Now come with me." The general then rode to the stream, fastened a rope to his saddle, and swam his mount with it to the other side.

You can't love such a man because he has made a fool out of you—forevermore in your heart. But you would have to respect him, because he proved himself right.

The Grant template is what they are after at West Point, not success in a popularity contest. That is why, at times, they are a hard breed for a non-West Pointer to understand.

In September of 1919 Congress gave to Pershing a rank previously held only by George Washington. As General of the Armies of the United States he outranked all the generals and admirals of World War II. In 1921 he served as Chief of Staff and as such laid down the permanent framework of our modern Army. When age began to come upon him, he met it in the cool dignity that had always marked his intercourse even with his most personal friends. He wrote no carping, critical books. He did not sell his retired sword to commerce. He made no particular effort to inflict his aging mind upon the Nation as a senior citizen. There was a humanity and an earthiness to the man that caused a whisper now and then but always fell short of scandal.

Of all men of his time, he seemed to have an unerring instinct for just exactly where he fitted into the scheme of things. He was, in essence, a dirt soldier who came up the hard way but loved his profession dearly enough to continue the pursuit of excellence in it—also the hard way. A dignified man by nature and by virtue of the period he was born into, he inherited the further dignity of Germanic stock. He never dramatized that dignity beyond its natural limitations—nor beyond the needs of the personification of the sovereign dignity of the United States, which he did, so ably, represent.

So that when his time came, on July 15, 1948, he folded his cloak about him—and quietly departed, almost a stranger to the new war that had come upon his country and to the newer threats still that growl beyond the horizons—but forever a part of the careful building to meet those threats—that will bring victory once more—when the time comes.

The Town Crier Eulogizes Joseph Ryan

EXTENSION OF REMARKS

OF

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 30, 1960

Mr. OSTERTAG. Mr. Speaker, while the House of Representatives was in recess last month, a warm and understanding friend of many in my area of the country passed away. He was Joseph M. Ryan of Batavia, N.Y., who earned real distinction as a civic leader and State official for many years.

The Town Crier of Radio Station WBTA, Mr. E. T. Gamble, paid sincere tribute to Joe Ryan in a recent broadcast, and I ask unanimous consent to extend my remarks in the RECORD to include this portion of his broadcast:

It was less than a month ago that we were in the Lexington Hotel in New York and, as is our custom, we dropped by the hotel barbershop to say "Hello," and inquire after the health of Joe, the boss barber. His last name we've never known, though we've known him for 20 years or longer. His greeting was the same as it has been through the recent years: "How is Joe Ryan? Tell him I'm not feeling so good myself and he better come down and see me."

Joe, the barber, walks with halting step, sits down as often as shop traffic permits, but he's still at the chair he has tended for something over 35 years. We are sure that of the tens of thousands of people who have visited the Lexington Barbershop over the years, no one is so well remembered as Joseph M. Ryan, of Batavia, whose death this week at 63 ended a life of many accomplishments, and countless services to his friends, his community, and his State and Nation.

For 10 years Mr. Ryan was a weekly visitor to New York as a member of the New York State Liquor Authority. About 15 years have passed since he was a frequent visitor to the city. It's the same with all older members of the hotel staff. When you register from Batavia, N.Y., if the desk clerk isn't a youngster, you are sure to be asked: "How is the commissioner?" Or, "Have you seen Mr. Ryan lately?" From management down to the phone operator, waiters and bellboys, the hotel's veteran employees have never forgotten their valued acquaintance with Commissioner Ryan.

A farm boy and 1 of a family of 13 children, Joe came from stout stock and his strength and stamina were displayed in high school sports, where he starred in track and football. His fellow team members still remember him as "strictly a team player," rather than an individual star. He played the game clean and gave it everything he had.

It was to be expected that he would be one of the first two men in Batavia to enlist for First World War service. As an artilleryman attached to the famed 1st Division, he was in a number of the major engagements of the war—was wounded three times and suffered a gas injury—returning to frontline service each time after hospitalization. He never took much part in postwar veterans affairs, and did not talk about the war except on a rare occasion when he encountered a buddy from 1st Division service.

The war gas left him with an aggravating cough that plagued him through life and led to the cruel and tormenting lung ailment that caused his death after nearly 2 years of grievous illness. We're convinced that it robbed him of at least 20 or 25 years to enjoy his material success in life for his father was a vigorous man who was still turning in a good day of work in his middle eighties.

It wasn't many weeks ago in a talk we had with him that he said this: "You know a fellow starts out in life, hoping to make enough money so he feels he's independent and can do the things he's always wanted to do. But it can be like climbing up a long hill. You struggle to make the top and when you get there and look around, you find there really isn't anything there."

People indebted to him for favors and wise counsel were legion and his host of friends included people in high and low places. A helping hand to a friend down in his luck was always extended without the asking. A promise of help was not just a lipservice but a forerunner that might be both costly and time consuming. When he gave you his word it was final and unconditional.

It was his refusal back in the early thirty's to withdraw a promise to support Attorney General John Bennett for Governor in a Democratic State primary that inspired opposition that a long time later blocked his appointment as chairman of the State liquor authority and also as chairman of the Democratic State Committee.

We never really understood why—but it was the job of member of the Liquor Authority in Western New York that he enjoys most and he gave it his full energies and talents.

Maybe it was because it was an assignment in which others had taken the easy way and merely attended board meetings. Or it could have been because he recognized it as one that took a firm hand to keep orderly conditions in the trade. He believed that people did not want letter of the law enforcement—but enforcement with heart and understanding that would keep sound process of administration and cause a minimum of distress.

The neighborhood tavern keeper with a family of five or six kids, who had violated the alcoholic beverage control law, always had more sympathetic treatment from the commissioner than did the man of power who had a variety of influential people urging easy treatment of his transgressions. And eyen after 15 years in this State service, he continued until his last days of life to have frequent calls for advice and opinion in matters of liquor law enforcement.

A lover of sports, Joe poured his money and his talents into bringing professional baseball to Batavia. When he thought it was too much a one-man show and that it might advance the sport if he stepped out, he turned his stock over without compensation and continued a loyal fan and supporter with never a suggestion that he be reimbursed for the funds he had advanced.

His fine sense of humor is illustrated in a story that we recalled today. It was while he was on the liquor authority and was sitting in a group that included the late Watts L. Richmond, a Batavia native who had been a volunteer coach when Joe was a high school football player. Another member of the group drew Mr. Richmond into a discussion of liquor law enforcement. It was soon after repeal and Mr. Richmond described conditions in Buffalo as terrible, saying that among other things that there were saloons next to most churches, the law was being flaunted, and that a bunch of New York Irishmen were running the law enforcement with a loose hand.

About this time he seemed to sense something wrong and he turned to Commissioner Ryan and asked: "Joe, what are you doing these days." And with a smile Joe replied: "Watts, I'm still a butcher."

The meat business in which he made his first success after coming back from war service was always close to his heart. He continued it along with his other enterprises and during the past year when he seldom left the house, he was in constant touch and by telephone did all of the daily ordering of supplies.

People across the Nation are pouring messages of condolence to his sorrowing family and here in his own community there is a widespread consciousness that we have lost a truly great citizen.

John J. Pershing, General of the Armies

EXTENSION OF REMARKS

OF

HON. RALPH J. RIVERS

OF ALASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1960

Mr. RIVERS of Alaska. Mr. Speaker, on June 1 the President approved House

Joint Resolution 640 proclaiming September 13 as a day for all Americans to pay proper homage to General of the Armies John J. Pershing and to the men who served under him. On that day all departments and agencies of the Government are authorized to cooperate with any civic and patriotic organization which may be conducting ceremonies in commemoration of the birth of General Pershing. As in communities throughout the Nation, Alaskans will join in paying homage to this great American and to the many men who served so bravely during the First World War.

Under leave to extend my remarks, I call attention of my colleagues to an excellent article by James Warner Bellah paying tribute to this man who so symbolized America's World War I Army. I would like to quote the final few paragraphs of Mr. Bellah's article as it appeared in the August 1960 issue of the American Legion magazine:

A TRIBUTE TO JOHN J. PERSHING, GENERAL OF THE ARMIES OF THE UNITED STATES

American soldiers as a class do not readily come by a love for their generals. There is no record of any great soldier love for Washington. For a time the Army of the Potomac seems to have had a deep emotional enthusiasm for General McClellan—but for no one else who commanded. The Third Army did not love Patton; they respected him. Nobody loved Stilwell; they admired him for the odds he was up against. The exception is the love that the Army of Northern Virginia had for Lee.

Therefore, the rule must be that if the character of an American general officer commands respect, that is enough for him to function on. You can hate his guts; but if you will follow him, that is the mission. The converse is that most of us have to employ a compensatory gut-hating technique in the face of strong character at a crisis of history—for there stands the antithesis of our own weakness.

On a maneuver in the Philippines years before World War I, the final movement of the problem called for a bridge across a swollen river. An Engineer lieutenant reported to Brigadier General Pershing that because of high water it was impossible even to get the first rope across the river. Pershing's answer was: "I never ask the impossible of any officer or soldier of my command. When you get an order, you must find a way to execute it. Now come with me." The general then rode to the stream, fastened a rope to his saddle, and swam his mount with it to the other side.

You can't love such a man because he has made a fool out of you—forevermore in your heart. But you would have to respect him, because he proved himself right.

The Grant template is what they are after at West Point, not success in a popularity contest. That is why, at times, they are a hard breed for a non-West-Pointer to understand.

In September of 1919 Congress gave to Pershing a rank previously held only by George Washington. As General of the Armies of the United States he outranked all the generals and admirals of World War II. In 1921 he served as Chief of Staff and as such laid down the permanent framework of our modern Army. When age began to come upon him, he met it in the cool dignity that had always marked his intercourse even with his most personal friends. He wrote no carping, critical books. He did not sell his retired sword to commerce. He made no particular effort to inflict his aging mind upon the Nation as a senior citizen. There was a humanity and an earthiness to the man that caused a whisper now and then but always fell short of scandal.

Of all men of his time, he semed to have an unerring instinct for just exactly where he fitted into the scheme of things. He was, in essence, a dirt soldier who came up the hard way but loved his profession dearly enough to continue the pursuit of excellence in it—also the hard way—A dignified man by nature and by virtue of the period he was born into, he inherited the further dignity of Germanic stock. He never dramatized that dignity beyond its natural limitations—nor beyond the needs of the personification of the sovereign dignity of the United States, which he did so ably represent.

So that when his time came, on July 15, 1948, he folded his cloak about him and quietly departed, almost a stranger to the new war that had come upon his country and to the newer threats still that growl beyond the horizons but forever a part of the careful building to meet those threats—that will bring victory once more—when the time comes.

Let's Stop Selling America Short

EXTENSION OF REMARKS
OF
HON. ROBERT B. CHIPERFIELD
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 30, 1960

Mr. CHIPERFIELD. Mr. Speaker, I wonder how many Members of this distinguished body are getting just a little sick and tired of those who are running down our great country.

Just the other day, I heard one of them say his "criticism is not borne out of disloyalty, but out of deep loyalty." To me, that sounds just a bit like the old quote about the licking in the woodshed—"this hurts me more than it does you." But when I was a boy I was always under the impression that I was the one who got hurt.

And today I think the country may be getting hurt worse than those who are trying to make capital by calling us a second-rate power.

Our national wealth is the greatest in the world. We have built more than 9 million new homes since World War II. Only a very few years ago the demand seemed insatiable.

Living standards are higher. Poverty and unemployment are close to a minimum. Our economy continues strong and steady, neither pushing upward into an inflationary spiral, nor slipping into recession. And above everything else, we are at peace.

We are spending 2½ times more for research and development than we did 7 years ago. Nearly 12 million more persons are covered by social security than when the Democrats lost the White House; and medical care of the aged is at long last getting the attention it deserves.

We are carrying a tremendous burden of defense and foreign aid in addition to the cost of domestic programs. Under President Eisenhower's administration and its leaders in Congress we managed to produce a $1.1 billion surplus last year.

We could probably have had a surplus of $4.2 billion this fiscal year, had the opposition paid any responsible attention to the recommendations of President Eisenhower.

But to become more specific about our relative standing, economically, with our principal competitor, Soviet Russia, I suggest we consider these figures recently compiled by the Library of Congress. They compare prices in terms of hours worked in Moscow and New York. They show how much better off American workers are than Russian workers.

Items	Hours worked, Moscow, Russia	Hours worked, New York, U.S.A.	Russians work times more
Suit clothes	275 hours	23 hours	11 times.
Lady's dress (rayon)	73½ hours	4 hours 36 minutes	16 times.
Cotton shirt	15 hours	56 minutes	16 times.
Shoes (man)	61 hours	7 hours	8¼ times.
Nylon hose	8 hours	37 minutes	13 times.
Beef (pound)	1 hour 22 minutes	21 minutes	4 times.
Butter (pound)	3 hours 4 minutes	20½ minutes	9 times.
Milk (quart)	31 minutes	7½ minutes	4 times.
Cigarettes (20)	27 minutes	7 minutes	4 times.

Now it will be said by some that Russia is at least ahead of us in the space race, even though at this moment we have 14 satellites in orbit as against 3 belonging to Russia. It is true that they can send a larger thrust into orbit, but our satellites have a notable advantage in the more subtle areas of instrumentation. We are better able to record, transmit and receive information about the universe.

We were the first to send a navigational satellite aloft. A satellite whose radio signals can provide "fixes" for ships in bad weather.

We were the first with a satellite whose successors will give this country early warning of missile launchings.

We were the first to recover a capsule from orbit in space.

The giant, 100-foot ballon, Echo I, is the largest object in space, and is the first communication satellite. It has already relayed recorded messages, "live" telephone calls and even radioed pictures.

The National Aeronautics and Space Administration expects soon to fire an American astronaut into space in the nose cone of a rocket, and have a man put into orbit and returned to earth. The moon will be the target of an instrument package.

And the most outstanding aspect of these technological breakthroughs is that they came from a nation whose research and development was begun in

1953—less than 8 years ago—in a Republican administration.

We have the word of President Eisenhower that we have become the strongest military power on earth. We have, for example, operational Atlas missiles ready for launching and capable of hitting targets anywhere in the world.

We have 2,000 long-range strategic bombers, deployed at bases around the globe, each of which can deliver more destructive power than has been spent in all the wars in history.

We have 16 wings of tactical aircraft, each with nuclear capability deployed on strategically located advance bases around the world.

We have missiles with large warheads, difficult to detect through defense radar.

We have Matador and Mace operational tactical missiles, each packing more explosive power than was expended against all Axis military targets in Europe during World War II.

We have intermediate range ballistic missiles, such as the Thor, which is stationed in allied forces' hands in the United Kingdom.

We have cruisers and submarines equipped with the Regulus I, a surface-to-surface weapon.

We have aircraft carriers, several of which are deployed around the periphery of the Soviet Union, able to launch more aircraft than the entire Soviet heavy bomber force and capable of nuclear strikes into almost any area of the Communist bloc.

We have naval alert forces which include 9 antisubmarine carriers, 14 cruisers, 269 destroyers, 115 submarines, 81 minecraft, and more than 7,000 operational aircraft.

We have 14 Army divisions, 8 overseas and 6 in this country, all at the highest state of readiness in peacetime history.

We have three divisions of marines, always prepared to move quickly and effectively into trouble spots anywhere in the world.

In addition, we have as part of our defense program another very important factor often overlooked by its critics: The collective military strength of our friends and allies abroad, embracing, in effect, the armed forces of all free nations. Our allies provide the United States with some 250 strategically located bases, contribute to our collective defense more than 5 million men, more than 25,000 planes, half of which are jet powered, and some 2,200 combat vessels which help insure free world control of the seas.

All this adds up to a military force overwhelmingly superior to anything the Russians can put together.

Nowhere in this admittedly brief account do I find anything but justification for pride in our country. I say, let us stop selling America short.

In the Nation

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 30, 1960

Mr. McCORMACK. Mr. Speaker, in the New York Times issue of January 29, 1960, Curtis Krock wrote an interesting article in relation to certain officials of the Defense Department engaging in campaign activities, which the present Republican administration should keep in mind in connection with the present election campaign.

What Mr. Krock said in relation to the Defense Department certainly has application also to the State Department:

IN THE NATION—OFFICIALS WHO SHOULD SKIP PARTISAN GATHERINGS

(By Arthur Krock)

WASHINGTON, January 28.—Senator HUMPHREY of Minnesota made a complaint today against the participation of high Defense Department officials in Republican political activities in this Presidential election year. He said this involvement was "unethical and beneath the dignity of the administration." He could have added that the appearance of such officials at party gatherings, including campaign fundraising dinners, is calculated to give a partisan color to the department responsible for military security.

Obviously the reaction to this in the Democratic Congress could further roil the atmosphere in which the administration's defense program is being examined by the legislative branch of the Government. This already has evoked much controversy over goals and the methods of attaining them. Since most of the critics are Democrats, among them citizens who clearly aspire to the Presidency, Republicans are hinting that partisan considerations are responsible for the violence of some of the criticism. But the Republicans would have small foundation for a hope that the people could be persuaded of this as a dominant motive if the Department of Defense seems to the public to be deep in Republican electoral politics. And the principal victim would be national security.

ITEMS OF COMPLAINT

Senator HUMPHREY cited, as grounds for his complaint, the drafting of the following as speakers at Republican fundraising "Dinners With Ike" last night: Deputy Secretary of Defense James H. Douglas, in Kansas; Army Secretary Brucker, in North Carolina; Assistant Secretary Short and Air Force Secretary Sharp in Texas; and Defense Secretary Gates in Oregon. (The latter's speech was read for him only because his plane was grounded by weather.) The list fully establishes the point made by the Senator.

The same situation arose in 1948. But in that year President Truman, at the insistance of Defense Secretary Forrestal, put a ban on the participation of officials of Forrestal's department in partisan political gatherings. This restriction followed an announcement by Senator Hatch, then chairman of the Democratic Speakers Bureau, that, except for Secretary of State Marshall and Under Secretary Lovett, all members of the President's Cabinet circle would take the stump for Mr. Truman in his campaign for election.

In this space at the time the following comment was made on Hatch's announcement: "This would mean that Forrestal is expected to be among the campaigners; that, though Marshall and Lovett were excused because of the 'nonpartisan' character of their work, this does not apply to the Secretary of Defense. * * * How any such difference coud be found between the department which conducts our foreign policy and the department which must supply the power on which that policy rests requires an answer that only partisan politicians could give." That applies equally today to Senator HUMPHREY's admonition.

FORRESTAL AND KENNEY INTERVENE

In 1948 W. John Kenney, as Under Secretary of the Navy, was in charge of the Navy's legislative relations, Congress had a Republican majority, and Kenney was carrying out Forrestal's instructions that Chairman Andrews and Gurney of the House and Senate Military Committees, respectively, should be kept fully informed on departmental activities. When they and other Republicans in Congress expressed resentment of Hatch's announcement, Kenney reported and endorsed this feeling to Forrestal, who endorsed it to President Truman, and the Democratic campaign committees which were the source of the plan were told by the President to find their campaign speakers elsewhere. In the campaign of 1952, when Kenney was deputy director of the Mutual Security Administration, the same question arose, and the President took the same position.

This wise and proper policy calls for reassertion by President Eisenhower to the Republican National Committee and the other party groups which apply the pressure to Defense Department officials to make speeches at partisan gatherings, including campaign fundraising dinners. These officials would be very happy if this pressure were removed from them, as it long has been from the Department of State. The President could do that with a word, and end the reluctant, improper and dangerous participation of the Defense Department in partisan politics.

Connally Amendment—HUAC and FBI

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, August 29, 1960

Mr. SCHERER. Mr. Speaker, through the CONGRESSIONAL RECORD I would like to bring to the attention of the Members of Congress and the American people two timely and vitally important news items appearing in the August 27, 1960, issue of the Tablet:

K. OF C. MEMBERS OPPOSE CONNALLY PROVISION REPEAL—UNITED STATES MUST NEVER ALLOW U.N. COURT TO DECIDE WHAT ARE DOMESTIC ISSUES—78TH CONVENTION HELD—DELEGATES BAR FOREIGN AID, BIRTH CONTROL, SUPPORT HUAC AND THE FBI

ATLANTA, GA.—Delegates to the 78th Supreme Council Convention of the Knights of

Columbus adopted a resolution here opposing the repeal of the Connally amendment which said that the World Court "shall have no jurisdiction over disputes with regard to matters which are essentially within the domestic jurisdiction of the United States 'as determined by the United States.'"

The resolution further stated that "we must never surrender the right and sovereignty of the United States of America to decide and determine its domestic and internal affairs and issues."

The Supreme Council of the Knights of Columbus "opposed the giving of the World Court any right, power, or jurisdiction to decide what are the domestic and what are the international issues and disputes of the United States of America, and favors the retention of the Connally amendment."

The resolution read:

"Whereas, a World Court was established by the United Nations in 1945, said Court to be composed of 15 judges, not more than 1 from each participating nation, which World Court is designed to be superior to the domestic courts of each nation that participates in the Court, and

"Whereas, the resolution of Congress, committing and binding the United States to participate in the World Court and to accept its jurisdiction, was amended by a resolution sponsored by Senate Tom Connally of Texas to provide that such Court shall have no jurisdiction over disputes with regard to matters which are essentially within the domestic jurisdiction of the United States 'as determined by the United States'; and"

PRAISE HOUSE COMMITTEE

"Whereas there has been introduced in Congress, Senate Resolution 94, which has for its purpose the repeal of the Connally amendment, and whereas we must never surrender the right and sovereignty of the United States of America to decide and determine its domestic and internal affairs and issues.

"Resolved, The Supreme Council of the Knights of Columbus, in annual meeting assembled opposes the giving of the World Court any right, power or jurisdiction to decide what are the domestic and what are the international issues and disputes of the United States of America, and favors the retention of the Connally amendment.

The supreme council opposed the use of U.S. tax funds to provide birth preventive information as part of the foreign aid program. Other resolutions adopted follow:

Endorsement of the "aims and efforts" of the House Un-American Activities Committee. It said the Communists have tried to destroy the committee by using American college youth, an apparent reference to the disorder caused by collegians at a May committee hearing in San Francisco.

Support and praise for the "aims, achievements and activities" of the Federal Bureau of Investigation and its director, J. Edgar Hoover. It said the FBI has been criticized "by innuendo and smear attacks by a small minority during the past year."

Condemnation of the Red Chinese for jailing of American missionary Bishop James E. Walsh, M.M., and an appeal to President Eisenhower to use "every possible means" to secure his release.

A call for respect and prayers for the late Cardinal Alojzije Stepinac, archbishop of Zagreb, Yugoslavia. The council said the cardinal is a martyr who should be remembered as an inspiration by all anti-Communists.

Support for a bill (H.R. 1374) before Congress to strengthen the power of the Post Office Department in dealing with distributors of obscene literature. The bill proposes several technical steps to streamline Post Office antismut efforts.

An appeal to K. of C. councils to give consideration to the American Society of Ephesus. The society, with Lima, Ohio, headquarters, hopes to restore the basilica containing the tomb of St. John, the apostle and evangelist, and the Marian Basilica, where in A.D. 431 Mary was proclaimed the Mother of God. Both are in Ephesus, Turkey.

Unqualified endorsement of the Catholic advertising program conducted by the supreme council. The program was hailed as one of the greatest apostolic endeavors of all times.

NAMED DIRECTORS

Delegates to the convention elected 8 members to the 21-member board of directors. Reelected for 3-year terms were: Luke E. Hart of St. Louis, supreme knight; Francis Fautex of Montreal; Clarence J. Malone of Topeka, Kans.; Charles J. Morgan of Chicago; Wilfred T. Connelly of Detroit; Henry J. Kondrat of Cleveland Heights, Ohio, and Emmet Burke of Yonkers, N.Y. Dr. John H. Griffin, of Hughesville, Md., was elected for a 1-year term to fill the vacancy of Charles B. Humeleine of Baltimore, who resigned.

CWV HITS RETURN OF MOVIE REDS—25TH CONVENTION BACKS "MARK AMERICAN" AND CONNALLY MEASURES

CHICAGO.—Some 4,000 delegates to the 25th national convention of the Catholic War Veterans last week enthusiastically accepted a committee report charging that Communist sympathizers are associated with 15 films soon to be released by Hollywood.

Reiterating their stand against employment of persons with pro-Communist backgrounds in this media as well as in television and radio, the CWV approved a recommendation by Americanism Chairman Joseph Anderson that members seek the cooperation of the public in a campaign to withhold patronage from these films.

Among the productions cited, were "Exodus," produced by Otto Preminger, and "Spartacus," by Kirk Douglas, both scripted by Dalton Trumbo, and "Inherit the Wind," produced by Stanley Kramer and written by Nedrick Young, alias Nathan E. Douglas. Young and Trumbo have been identified as Communists.

COMMEND "CONSPIRACY"

The veterans also approved a resolution commending Paramount Pictures and England's J. Arthur Rank studios for the picture "Conspiracy of Hearts," describing it as "a human interest story of courage in the face of evil, violence, and hate."

CWV delegates reaffirmed the organization's opposition to the admission of Communist China to the United Nations and its recognition by the United States, asserting it is increasingly evident that special interest groups are exerting pressures to accomplish these ends.

They again called for implementation of the Mark American resolution by which Congress has authorized that all foreign aid goods be suitably marked "Made in the U.S.A." When failure of the proper Government agencies to do this was criticized by the idea's originator, John J. Shaughnessy, of Brooklyn, Mr. Shaughnessy was relieved of his civil service post. The resolution asked an investigation into the firing as well as failure of authorities to follow the expressed wishes of the Congress.

The convention also urged retention of the Connally amendment, repeal of which has been called for by both political parties. The controversial amendment allows the United States to determine if international controversies to which it is a party are domestic matters and thus outside the jurisdiction of the United Nations' World Court.

PRAYER FOR U–2 PILOT

Rev. Rufus J. Wicelinski, O.F.M. Conv., of Ellicott City, Md., C.W.V. chaplain, led the delegates in prayer for the welfare of U–2 pilot, Francis G. Powers. A resolution was passed asking the proper authorities to "do everything possible to honorably secure the release" of the civilian airman who was convicted of spying by the Reds and given a 10-year sentence.

Among the 50 resolutions considered, affirmative action was taken on a request that President Eisenhower "lodge an official protest with Chinese Communists" against the unjust imprisonment of Maryknoll Bishop James E. Walsh and demand his immediate release; commendation of the President for the dignity, courage, and restraint with which he faced the "abusive verbal attack" of Khrushchev at the abortive summit conference; recommendation that Congress retain the House Un-American Activities Committee.

Also, inaugurating a letterwriting campaign to the U.S. Ambassador to the United Nations, Hungarian U.N. delegates, and Khrushchev protesting the jailing of children who aided the 1956 uprising until they are 18 at which time they will be executed; urging this country to use all appropriate means for the liberation of Red-enslaved nations and that we see to it that at all summit and other international sessions "appropriate recognition be given to the Supreme Being in all deliberations"; pledging support to programs which oppose shopping on Sundays; recommending the United States adopt "a strong policy" regarding Cuba and firmly oppose any attempt to take over our Guantanamo installations.

Memorial Tribute to Oscar Hammerstein

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 30, 1960

Mr. CELLER. Mr. Speaker, Oscar Hammerstein II is dead, at the height of his creative powers. The uncrowned poet laureate of the musical stage, his unique talent delighted many generations of theater goers with the grace and unabashed sentiment of his lyrics. His departure from the human stage at the age of 65 halts forever the collaboration with Richard Rodgers, which began with "Oklahoma!," continued through "Carousel," "Allegro," "South Pacific," "The King and I," "Me and Juliet," "Pipe Dream," "Flower Drum Song," to the current Broadway success, "The Sound of Music."

The magic touch of Oscar Hammerstein II did not come without effort. Born into a theatrical family, he schooled himself in the theater from an early age. One of his earliest mentors was the dean of American lyricists, Otto A. Harbach. Hammerstein was accustomed to write and rewrite laboriously in pencil until at last his inspiration took the form best suited to its content. He used to say that the requisites for good lyric writing, in addition to a knowledge of musical form and the mechanics of song, are fourfold; something to say; a deep-down desire to say it; a sense of rhythm, and a feeling for poetry.

Oscar Hammerstein II had more than talent—he had character. For many lean years in the thirties success, after brushing him with her wings, seemed to

have deserted him forever but he stubbornly continued to work in the musical theater. Lured by his deep poetic ability and his perseverance in his chosen profession, success finally and gloriously returned to him.

Oscar Hammerstein II was not only uniquely talented; he was also endowed with a desire to serve his fellow man and especially his fellow workers in the musical world. For almost 20 years—from 1939 to 1960—he served as a member of the board of directors of the American Society of Composers, Authors, and Publishers—ASCAP. He was one of the chief guides of the destiny of this unique institution which has done so much for composers and writers of musical works and, with leaders such as Hammerstein, has become not only a respected but essential component of the entertainment world.

Oscar's stature was great. His heart was great. His reputation was great. The memory of this great American will remain forever in the hearts of all of us who love the theater and who were privileged to know this unique gentleman.

Goethe died calling for light. Oscar Hammerstein ever sought light and knowledge and truth. He learned much from living. He learned the divine order of things, that you cannot violate the laws of nature with impunity. He knew the laws of compensation. He recognized the dignity of the individual and refused to judge success by the mere acquisition of wealth. His judgment of man's worth was unselfish devotion to the welfare of one's fellows.

Queen Elizabeth died saying, "I have lived." Oscar Hammerstein lived in every true sense. He lived fully but unfortunately for too short a span. He rounded out his life with many activities aside from those of lyrics, music and the theater. There were few good causes that failed to attract his active attention, whether they concerned atomic bombs or welfare agencies, Actor's Equity, ASCAP or juvenile delinquency. He was alert to and made himself conversant with the perplexing problems of our era.

Charles Darwin's last words were, "I am not afraid to die." I am sure Oscar Hammerstein was not afraid of death, just as he was unafraid of life. He had a heart for every fate. He has now taken his last voyage—a great leap in the dark. He knew that "life is but preparation for death." He realized there can be no reason why life should be perpetuated in any one person. Immortality lies in handing down life to one's children and their children, like one who gives the torch of life to another and he to one more, and so on down the corridor of time. He must have agreed with Lord Byron, who said:

Death, so called, is a thing that makes men weep,
And yet a third of life is passed in sleep.

John Keats said, "I feel the flowers growing over me." Yes, Oscar Hammerstein I am certain, would want flowers to grow upon his grave—flowers of delicate hues and fragrance, as symbols of a gentle, benign creature. God placed his finger upon him and he sleeps.

I should like to append to my remarks a tribute paid to Oscar Hammerstein II by the New York Times in its editorial columns of August 24, 1960, headed, "Oscar Hammerstein 2d":

Although Oscar Hammerstein 2d had a genius for the musical theater, he had something finer than that. He had character. His death yesterday shatters the remarkable collaboration of Richard Rodgers, composer of the music, and Mr. Hammerstein, composer of the lyrics and most of the books of their plays. Now we must accept the doleful fact that there will be no successors to "Oklahoma," "Carousel," "The King and I," and "South Pacific."

The big four—written within the span of 8 years—have become part of our cultural heritage.

But the theater has also lost a man of character who stood for all that is decent in life. His point of view was implicit in everything he wrote. The concern for racial respect in "South Pacific," the sympathy and respect for a difficult though aspiring monarch in "The King and I," the indomitable faith that runs through "Carousel" were not clever bits of showmanship. They represented Mr. Hammerstein's faith in human beings and their destiny.

Outside the theater, as well as inside, he quietly accepted the responsibilities of a man of conscience. If his work represents something more than surface pleasure, it is because he brought the whole force of his character to it. Like Billy in "Carousel," he was always prepared to be "judged by the highest judge of all."

Since he was at heart a serious man, his lyrics were rarely clever. Instead of turning facetious phrases he made a studious attempt to write idiomatically in the popular tradition of the musical theater, for he was a dedicated craftsman. But the style that is apparently so artless has brought glimpses of glory into our lives. "There's a bright, golden haze on the meadow," sings Curley in "Oklahoma," and gritty streets of a slatternly city look fresher. "June Is Bustin' Out All Over," sing Carrie and Nettie in "Carousel," and the harshness of our winter vanishes. "Getting To Know You," sings Anna in "The King and I," and the world becomes a friendlier place.

In memorable songs there is a quality of transmutation that turns the common materials of life into something that seems ideal. Since Mr. Hammerstein was a craftsman it must have been a gratifying experience to have written the lyrics of so many songs that have become musical literature—all the way from "Show Boat" to "Sound of Music." To us it is gratifying that he also had the character to use his genius with faith and scruple.

I include also an editorial from the New York Herald Tribune of August 24, 1960, entitled "Oscar Hammerstein and His Songs":

OSCAR HAMMERSTEIN AND HIS SONGS

The role of the librettist traditionally is a minor, even a minimal one. When one thinks of "Aida," "Carmen," "Don Giovanni," one remembers Verdi, Bizet, and Mozart, not Ghislanzoni, Meilhac, and da Ponte.

But this was not true of Oscar Hammerstein II any more than it was true of W. S. Gilbert. The great musical shows of our time such as "Oklahoma," South Pacific," "The King and I," and "Carousel" were all by Rodgers and Hammerstein, and few conjunctions have been as significant in theatrical history.

Mr. Hammerstein's achievement was all the more remarkable in that, in his partnership with Richard Rodgers, he stepped into a role that had been filled with flair and distinction by another man, Lorenz Hart.

To this collaboration Mr. Hammerstein brought new qualities of literary distinction and emotional impact. He wrote not only good lyrics but good plays. He respected and put to good use the richness of the American language.

Even aside from the collaboration that began in 1943 with "Oklahoma," Oscar Hammerstein was assured of his share of immortality. It could not be otherwise with the man who wrote the words of such songs as "Ol' Man River," "When I Grow Too Old To Dream," "The Last Time I Saw Paris"—words which caught a mood, a moment; words which stirred profound emotions.

Others made his country's laws; Oscar Hammerstein made its songs. And in them he lives beyond death.

Good Debt Management

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. CURTIS of Missouri. Mr. Speaker, I place in the RECORD an editorial appearing in the Baltimore Sun, August 29, 1960, which I think effectively answers the wild charges of robbery made by a few spokesmen of the Democratic Party in their discussions of the refunding plans of the Treasury Department:

PLAN FOR THE DEBT

Representative REUSS and several colleagues have criticized Treasury plans for advance refunding of World War II bonds paying 2.5 percent interest and falling due between 1967 and 1972. The refunding would be at rates nearer the present market. According to Representative Johnson of Colorado, "this is robbery in broad daylight." The Government would have to pay higher interest, that is, than on the bonds which it wants to call in.

But in any refunding, the Treasury has to meet prevailing market rates. There is no guarantee that they will go as low as 2.5 in any near future—that the present 2.5 bonds can be refinanced at the same low rate. The reason is that the rate was held down when the bonds were issued by artificial wartime pressures. Yet interest rates have been declining. While the Treasury doubts they will go as low as 2.5 percent, it knows they can well begin to rise again. In other words, on just the interest-rate ground cited by the critics, the present seems to the Treasury a propitious time to make the advance refunding offer.

Certainly the debt managers think they would be buying something of value for the higher rate. One main advantage would be an extension in the average maturities of the national debt. This is a vital consideration when the debt is as large as it is in this country. With the Government incomparably the biggest borrower there is, every time it goes to the money market it competes heavily with State, city, and private borrowers. Yet State and city borrowing is vital and it is on the private borrowers that the country depends for economic growth.

Naturally the Treasury wants to minimize the frequency of these competitive forays into the money market. One way to do this for the immediate future is to get as much debt as possible into the longest term secu-

rities. The Treasury is thinking in terms of 20, 30 and 40 years for the new advance refunding bonds. Considerations like these make a solid counter to the points raised by Mr. REUSS and his friends.

Extolling Simple Living

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 30, 1960

Mr. AVERY. Mr. Speaker, much has been said and written in recent years about the disappearance of the small rural community from the national scene. There is obviously considerable evidence throughout the Middle West that the small town or community does not occupy the same place economically nor socially that it did even 25 years ago. This is not a pleasant observation for me because I spent my childhood on a farm at the edge of a small town in northeast Kansas. Nevertheless, with our modern communications, transportation, and facilities for large-scale farming, there no longer remains the economic factors necessary to sustain these midwestern communities. In view of this changing picture, it is refreshing to note that Richland, Kans., has undertaken a project that may not reverse the trend away from small towns, but it does certainly remind everyone of the many virtues existing in the way of life in a rural community. This project in Richland has largely been under the direction of Andy Gray, businessman in the Richland community and highlighted by a homecoming observation at the annual Richland Fair from August 14 to 17.

This project in Richland, Kans., has attracted much attention not only in our State of Kansas but in surrounding States as well. So many persons have spent their early lives in small towns that this project must have reminded them of the many pleasant memories of their childhood and reminded them also that the environment in a small town had a very wholesome and stabilizing impact on them which carried on through their entire life.

The theme of this project was well spelled out by Mr. Gray in this simple sentence, "In contrast to chamber of commerce type activities, we intend to extol simple living." I am personally familiar with Richland, Kans., and know many persons who live in the community. There is a population of only about 200, but nevertheless it exemplifies rural living in the United States of America. Congratulations to this typical Kansas town for its effort to remind us of some of our most important resources.

Mr. Speaker, under previous consent, I include two editorials dealing with this project in Richland, Kans.:

[From the Topeka Sunday Capital-Journal, June 26, 1960]

EXTOLLING SIMPLE LIVING

The village of Richland 19 miles southeast of Topeka will stage the Richland Homecoming Fair August 14–17 and believes the theme of the 4-day event is extraordinary.

"In contrast to chamber of commerce-type activities," says the Richland fair president, Andrew J. Gray, "we intend to extol simple living. We hope to attract crowds and interest by being ourselves. There will be no brags about exploding population (ours is 200); not a word about tallest buildings or expanding industry.

"Our story is that for a few days people can visit Richland and sample, enjoy and refresh themselves in a hometown atmosphere. In boosting Richland, we hope to put into focus the fact that there is something nice about rural living. Richland typifies it."

The Richland fair, a nonprofit community activity, will have carnival, food and livestock judging, 4–H contests and other events which usually are part of fair activities. But Richland's stress on the satisfactions of smalltown life, while commonplace enough, is at the same time extraordinary in promoting a fair.

[From the Parsons (Kans.) Sun]

EDITOR WRITES MOVINGLY ABOUT SMALL TOWNS

I am a compact cluster of people and their modest homes, set down along the banks of some placid stream, or in some secluded vale—or perhaps in the sheltering shadows of high hills.

I make no pretense at earthly greatness. No roaring facilities of mankind intrude upon my premises; no glittering spires or minarets or towers dominate my lowly skyline.

Yet I represent a happiness and a repose such as is rarely found in these latter days of worldly turmoil and striving.

Sturdy hands formed my outlines in the long, long ago when the world was young—and when an empire was being wrested from the virgin wilderness. I am the product of the truehearted—those faithful, valiant ones, who came and stayed, who planted their banners on the rolling prairies and established a secure homeland for their kind.

I am not given to vainglory, nor to the conceit of thanking any gods that I am not as others are. Yet I hold a deep and glowing pride in the land whence I came, and in the warm family life which it has fostered and sustained.

I am profoundly grateful that the blood of the gallant pioneers, with their "far, eternal look," runs in my veins. I take satisfaction in the knowledge that the lessons they taught of frugality, of the innate blessings of honest work and adherence to the basic virtues have not entirely departed from me.

I rejoice that the dwellers within my narrow boundaries find delight in the lovely landscape about them, contentment in simple forms of toil and recreation, and strength in the ties of true neighborly relationships.

For my part, I endeavor to bestow upon them a perspective of peace, free from bedlam and confusion, far removed from the clang and clamor of worldly marts and the buzzing hives of industry. Here, I accord them calm and tranquillity, inviting them to work and play at moderate pace, to mingle harmoniously with kindred spirits, to ponder and reflect, and to find sufficient time and room for their souls to grow.

Wayfarers will not behold my name emblazoned in dazzling lights—yet there are those scattered in far places who remember me tenderly—sometimes with tear or sigh. The mapmakers mark me with a single dot upon their charts—yet to some who wander in the desolation of human jungles I bear the magic and mystic symbol of home.

I number my children only by the score, and those who sojourn in the crowded canyons of massed centers hold me in slight esteem. I bear no grudge, for I am favored with such bounties as the good earth, the radiant sky, the free and vagrant winds, and a sympathetic kinship with all Nature—which comfort me. Each day as it passes brings new vigor—new appreciation for the wonders of plain, wholesome life.

I occupy only a tiny spot in the firmament, yet my being must be marked for usefulness in the master plan, else there would not be so many of me.

I am a haven and a habitation, and my environment has also invested me with a personality through which I strive to exalt the concord of brotherhood. From me flows a force which, I am convinced, exerts a mellowing influence upon the driving lustiness of our Nation, and contributes the savor of tolerance and restraint to the distilled essence of its character.

I am the American small town—the final freehold of American liberties, and the sleepless guardian of America's unrivaled and surpassingly precious way of life.

An Outstanding Farmer Writes About the Farm Problem and Its Solution

EXTENSION OF REMARKS
OF
HON. JOHN R. FOLEY
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 30, 1960

Mr. FOLEY. Mr. Speaker, in 1952 the total number of farms in the United States was 5,400,000. By the second quarter of 1960 this number has been reduced to 4,500,000, a loss of 900,000 farms. The net income per farm including net change in inventories in 1952 was $3,010. For the second quarter of 1960 this net income for farms is $2,640.

In 1952 prices received by farmers on all farm products was 288 percent of the 1910 to 1914 index. By July 15, 1960, the percentage had dropped to 238 percent of the same index. In 1952 prices paid by farmers on all items including interest, taxes and wage rates was 287 percent of the index. By July 15, 1960, these prices had increased to 298 percent of the 1910–14 index. Thus the prices received lowered 50 percentage points while during the same period farm prices paid increased 11 percentage points.

In talking with farmers from Maryland's Sixth District at the Montgomery County Fair at Gaithersburg during the week of August 22, 1960, various suggestions for solving the farm problem were discussed.

Mr. W. Lawson King, of Gaithersburg, is a leading dairy farmer in Maryland and the justly proud owner of the all-American champion Holstein bull for 1958 and 1959. His views on the farm problem are contained in a letter to me which I am pleased to insert in the CONGRESSIONAL RECORD:

IRVINGTON FARM,
Gaithersburg, Md., August 29, 1960.

Congressman JOHN FOLEY,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FOLEY: Agriculture, which is the farmer and where he finds himself after many years of management by the Agriculture Department and foolish advice, and accepted by the Congress and Senate of the United States attempting to control production by acres, at the same time spending

millions of dollars through the colleges teaching the farmer how to produce more per acre. It has proven that the present system will not work and it seems to me that this should have been realized many years ago. The present cost of storing surplus is now running about $1,200,000 a day. This seems to me enough signal to change the entire system of control of production. My suggestion is that we either go one of two ways and I will attempt to explain my ideas in the one or two ways that I have in mind.

First, that we have full control on the basis of bushels or pounds by setting up a base on the past 5 years production of each and every farm in this great country of ours, which means full control which many of us are not strong for, but when we find ourselves in a position of spending the amount of money that is being spent to carry the cost of a program that has failed to work we have to take some rigid stand. We hear some folks say that full control would be socialist, but what could be more socialist than hoarding of grain when there are millions of people in the world starving? I do not know too much about the Bible, but I think and know that it does mention the hoarding of grain as being wrong and I would certainly think it would be wrong when there are millions of people who are undernourished and starving. If we could have a complete audit in the method and cost of storing this grain and the few that make millions, I think it would open the eyes of the Congress and Senate to take a rigid stand on this important matter.

Now, my second idea is this—to take all controls off, get rid of many of the people who are participating in the method of control that we have in effect today and let the farmers control their own production based on supply and demand and at the same time that you do this get rid of the farmers' home administration and any and all direct government lending agencies to agriculture and allow the farmer to operate his farm as he did many years ago based on supply and demand. As you know, this method will reach and hurt many people—poor farmers and those agencies that are directly working into the program that has cost all of the millions and billions of dollars.

The cost of running the Agriculture Department has been a very expensive one and more expensive in the last number of years and the years ahead to run a program that has gradually, speedily, grown worse in the cost of its functions. We spend these dollars, all to find out how many pounds of sugar and beans we eat in this country, and after we get all these records that are so costly to produce, we then do very little or nothing about it. Agriculture is a very important part of our economy. Government is a very important part of our life, but it was never intended that government support the people. It is the intent and right that the people support their Government and the cost of running the Department of Agriculture under the present program is growing more of Government supporting the farmer instead of the farmer supporting the Government.

I hope that this Congress will take the time to pass the necessary legislation to correct this contagious disease that there seems to be no cure for; I refer to the present program of agriculture. I read and from the figures of the Department of Agriculture that the farmers' net worth is very great. What has caused this? Inflation in land values caused by the purchase of land by investors and wealthy people of the world. What has this inflation in the land values meant to farmers? It has meant that they could borrow more money on the inflated values which means that the farmers today owe more money than they ever owed in dollars than at any other time in this great country of ours. The cost of operating the farms has increased and is still increasing, and the income to the farmer per unit is continuing to decline and under the present method it will continue to get worse because the farmer is fighting for more units at a lower price to realize enough income to keep him in his daily operation.

I suggest to the candidates for President that they not rely upon college professors and corporation presidents to assist in writing a bill for agriculture, that they go to the farmers who have given time and study of their situation and get the ideas from these farmers which will assist them in coming up with a workable agriculture program. Doctors do not go to lawyers when they have an ill patient; lawyers do not go to doctors to assist them in practicing law. Would you expect the president of General Foods to give ideas to assist the farmers? Check the list of 18 chosen by the President to advise him on agriculture, and the reports from them to the President, and find who was making the motions and see if they were farmers. In my opinion, this is one of the most serious responsibilities of the Senate and Congress today.

I hope that I have been of some help in suggesting to you, Mr. Congressman, to assist you in making up your mind.

Respectfully yours,

W. LAWSON KING.

Fellowship of Christian Athletes Conference

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 24, 1960

Mr. SMITH of Mississippi. Mr. Speaker, one of the greatest baseball pitchers in recent times was David "Boo" Ferriss of the Boston Red Sox. Boo Ferriss is still best known to us in Mississippi as the great schoolboy pitcher at Shaw, in spite of his later exploits in leading the Boston Red Sox to the American League pennant in 1946.

Today Boo is making a great record as athletic director at Delta State College in Cleveland, Miss. He recently outlined in a guest column in the Cleveland Bolivar Commercial the story of the Fifth Annual Fellowship of Christian Athletes Conference.

Under unanimous consent, I include Mr. Ferriss' comments on this significant movement:

(By Boo Ferriss, athletic director of Delta State College)

Pinch hitting was always one of my toughest jobs in baseball, and I find filling in for our able editor and good friend, Clif Langford, is even tougher. I am sure you join with me in wishing Clif a most successful journey, and we will be anxiously looking forward to his reports of this study mission abroad. We are proud of Clif for being chosen for this assignment, and I appreciate his asking me to pinch-hit for him.

I have just returned from Estes Park, Colo., where I was privileged to serve on the staff of the fifth annual fellowship of Christian Athletes Conference which attracted 600 high school and college athletes from every part of the country.

With the majestic snowcapped mountains of the Rockies serving as a background, the 5-day conference was one of "inspiration and perspiration" during which religion was linked vigorously and harmoniously with athletics. The youngsters rubbed shoulders with outstanding men from the world of sports and listened attentively as they told of their athletic experiences and Christ's influence on their lives. In talks and workouts the stars and coaches polished the youngsters' athletic skills, and then, in small Bible huddles or mass meetings, the stars talked on the importance of religion.

Among those on the staff of the nondenominational fellowship were: Frank Broyles, Arkansas grid coach; Bob Pettit, St. Louis Hawks pro cage star; basketball coaches Dick Harp of Kansas and Ben Carnevale of Navy; Don Lash, former Indiana U. track great; Donn Moomaw, twice UCLA All-American lineman; Bebe Lee, Kansas State athletic director; and Marvin Franklin, SMU end coach.

A large number of college athletes were in attendance, many of whom will be making headlines in the forthcoming football season. Gus Kinchen, one of the famed Chinese Bandits of LSU and student body president, told of kicking a tremendous seven yard kick after which Ole Miss went on to score at the Sugar Bowl. Encouraged by Coach Dietzel to cheer up, things could be worse, Gus cheered up, had a kick blocked and Ole Miss scored again. Kinchen told, too, what Christment to him and the LSU football team.

One of the most impressive sights was seeing these young athletes with a pair of football, basketball, or baseball shoes in one hand and a Bible in the other. A very unforgettable sight, also, was the discipline of silence following breakfast each morning when the youngsters would go alone to all parts of the conference grounds and for 30 minutes sit in quiet meditation and prayer. And you can imagine the thrill of hearing 600 male voices singing "Rise Up, O Men of God" and "Battle Hymn of the Republic."

A fine looking California high school pitcher told me the conference was the greatest thing that ever happened to him and his life now had new meaning. I am sure there were many more boys who came to realize that as Christian athletes they could have much influence in their towns, schools, and communities.

Because of the increased enrollment at the Estes Park Conference the past 4 years, a similar conference was held at Lake Geneva, Wis., August 7–12, and eight athletes from our area attended; from Cleveland, Lee Lewis, Merrill Boyd, Billy Smith-Vaniz, Wylie Hilburn, Jimmy Harden, and Bill Hunter; from Shaw, Donald Vineyard and Dump Warren.

On the Lake Geneva staff were such well known sport figures as Paul Dietzel, LSU coach; Bob Feller, former major league pitching great; Otto Graham, former pro football great; Pete Elliott, Illinois University football coach; Frank McGuire, basketball coach at North Carolina; Don Faurot, Missouri University athletic director; and Bill Easton, Kansas University track coach.

You may be interested in knowing that in 1954 a young college basketball coach, Don McClanen, of East Oklahoma A and M, was the originator of the Fellowship of Christian Athletes. "It occurred to me," McClanen once said, "That nearly everybody was capitalizing on the well-known social phenomenon of hero worship. I knew that if guys like Otto Graham, Bob Feller, and Alvin Dark told kids to eat a certain kind of cereal, the kids ate that kind of cereal. I wondered why, if sports stars could endorse breakfast foods, cigarettes, razor blades, or sportswear, they couldn't endorse Christianity."

With an undying faith and determination Don McClanen has seen his crusade become a powerful and influential fellowship. Though much of the credit for its success is his, he is quick to remind anyone that "the credit belongs to the Lord. I am merely trying to do His will."

George Sokolsky on Vincent Hallinan

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. SCHERER. Mr. Speaker, one of the lawyers representing identified Communists before the House Committee on Un-American Activities at its hearings in San Francisco was Vincent Hallinan. Mr. Hallinan engaged in a number of contemptuous outbursts against the committee during the riots which took place in connection with those hearings. In view of his record, with which the committee is familiar, it was no surprise that this gentleman was selected by the Communists as an observer at the recent Powers trial in Moscow.

George Sokolsky, in his usual effective way, clearly points up the issue in his recent column entitled, "Invitation to Hallinan":

INVITATION TO HALLINAN
(By George E. Sokolsky)

For reasons of their own, Soviet Russia invited Vincent William Hallinan, a San Francisco lawyer, to attend the trial of Francis G. Powers, the U-2 pilot. Hallinan attended as an observer. He was not asked by the Government of the United States to be an observer. For that purpose an Embassy is maintained in Moscow. Why then did the Soviet Legal Society ask this particular person?

Hallinan is not the president of the American Bar Association. He is not the dean of a distinguished law school. He is not a judge or even a particularly prominent jurist. So why was he asked?

Well, he is an American Marxist. He once said that he developed from an intellectual rebel to a Marxist-Leninist. By any definition, a man who so describes himself could be called a Communist by his own admission whether he belongs to the Communist Party or not. One of his clients was Harry Bridges whom he defended in 1949; another was Marion Bachrach, indicted under the Smith Act, in 1956. In 1952, he ran for President under the label of the Independent Progressive Party. If you do not know of this party, it is way out left. He has been on the board of directors of the Civil Rights Congress and in 1951 was vice president of the National Lawyers Guild.

So far as the Attorney General's list is concerned, he has supported the Joint Anti-Fascist Refugee Committee, the California Labor School, the Northern California Committee for the Protection of Foreign Born, and the Committee to Secure Justice in the Rosenberg case.

So the Russians regard him as a suitable American observer. Out of the thousands of American lawyers, they pick this one to return to this country to say that everything they, the Russians, have done is perfect. Actually, they have had experience with Hallinan. He toured Europe in 1959 and issued a statement from Moscow to the effect that he had visited a Russian jail and that the Russian prison system is far superior to that of the United States.

In this, Hallinan is not altogether without intimate knowledge. In 1952, he served 6 months in McNeil Island Federal Penitentiary for contempt of court which arose out of the Bridges trial. In 1954–55, he served 18 months for income tax evasion as a result of which he was suspended from practice for 3 years. He resumed legal practice in March 1960.

This then is the needle in the haystack that Soviet Russia found to invite to Moscow as the American observer in the Powers case. If there was to be an American observer, custom and decency require that such an invitation be extended to the Government of the United States. Then the Government could, if it wished to send a lawyer, request the Department of Justice to select a learned jurist, a man of distinction, to attend the trial. The likelihood is that somebody from the embassy would have attended officially. But Soviet Russia picked this lawyer who had once been suspended from practice, who had twice been imprisoned, to represent the United States.

Now presumably Vincent William Hallinan will return to the United States to engage in propagandistic speeches on behalf of Soviet jurisprudence. He will undoubtedly pose as an expert on Soviet law and American espionage and will condemn the Pentagon and the CIA. And there will undoubtedly be women's clubs that will pay a fee to listen to intimate talks on this subject. It is amazing how many so-called Americans have suddenly become experts on Soviet Russia and how many of them travel about the country praising the ways of life of the bitterest foe we have had in our history.

U.S. Senator Spessard Holland, Florida, Wins Great Victory

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 30, 1960

Mr. FASCELL. Mr. Speaker, the city of Long Beach, Calif., recently held a civic testimonial in honor of Florida's Senator, SPESSARD HOLLAND. Does it strike you as unusual that the people of California honor the distinguished U.S. Senator from Florida?

Not at all, they have good cause, as do the people of Florida and all America.

Mr. Speaker, I could not have this Congress close without again calling to the attention of my colleagues a significant and important contribution by Florida's distinguished and able senior Senator, the Honorable SPESSARD HOLLAND. His participation and leadership in a momentous task has culminated in the recent ruling of the Supreme Court of the United States applying the Submerged Lands Act to the State of Florida. This ruling confirms Florida's claim to all property rights to a distance of 3 marine leagues in the Gulf of Mexico, off the mainland of Florida.

Not only has Senator HOLLAND had to carry on his many duties in the U.S. Senate, but since 1951, he has had a primary responsibility in the tidelands dispute, which affects many of our States. His most recent effort was joining in the argument before the U.S. Supreme Court. The case was so brilliantly and convincingly presented that it resulted in a 6 to 1 decision. In this matter, Senator HOLLAND has gone far beyond his duty as a U.S. Senator. He has fought for and supported, in and out of the Senate, a cause born of deep conviction—the cause of States' rights. In these days of claims of centralized government, it is especially noteworthy that in a case of this magnitude, the U.S. Supreme Court has recognized the proprietory authority of the State of Florida over these marine lands. The Court's decision not only settled oil and gas rights, but the citizens' rights in construction, extension of lands, conservation, use of sand and gravel, and other still unknown and potential rights in the use of the sea.

The affirmation of these rights are important in themselves. There is, however, greater pride for all of us in recognizing and realizing that this long, persistent effort on the part of Florida's great Senator took courage, determination, ability, and qualities of leadership which can only be claimed by few Americans. U.S. Senator SPESSARD HOLLAND, senior Senator from Florida, has carved a rightful place in American history with this most recent success in a long and distinguished public career.

After this session, Senator HOLLAND will return to Florida for this year's presidential campaign. Nothing less than a hero's welcome should be awaiting him.

Decision for the Democrats

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 30, 1960

Mr. DEROUNIAN. Mr. Speaker, I ask that there be placed in the Appendix of the RECORD an editorial that appeared in the Washington Evening Star on August 27, 1960. The editorial discusses a clumsy situation created by overanxious members of the Democratic Party. This has been apparent to the American people and it is also clear that now the Democratic Party is faced with a decision to be made because they cannot have it both ways:

CAN'T HAVE IT BOTH WAYS

Efforts of some Democrats to make political capital out of President Eisenhower's press conference comments on Vice President NIXON's advisory role in the administration are confusing, to say the least. The net effect has been to put those indulging in such disingenuousness in the rather absurd position of arguing against their own arguments.

In the first place, we do not recall that the Vice President ever has claimed that he shared in the decisionmaking responsibilities of the Chief Executive. On the contrary, Mr. NIXON has made it plain in the past—and has reaffirmed it in a television interview following the President's press conference—that his role in the Cabinet and National Security Council meetings has been solely of a consultative and advisory nature. However, the Vice President's attendance at these meetings certainly has provided him with an invaluable background of knowledge and experience that should be of great benefit to him if he were to become President of the United States.

In the second place, the glee with which some Democratic spokesmen have greeted Mr. Eisenhower's assertion that he alone makes administrative decisions is hard to understand, in view of Democratic attempts to saddle Candidate NIXON with some responsibility for the Eisenhower administration's farm policies, defense "shortcomings" and other alleged Republican failures. Their real target ought to be President Eisenhower himself—but apparently the present strategy is to go easy on Mr. Eisenhower. Too many people still like Ike.

But if the Democrats want to blame Mr. NIXON for what they regard as basic faults of the Republican administration, then they can ill afford at the same time to belittle the role of the Vice President in the councils of state held under the Eisenhower regime. Contrariwise, if the Democratic pitch is to be that Mr. NIXON has been in no position to gain either valuable knowledge or experience in the Government, any charge that he is even partly responsibile for so-called Republican bungling in domestic or international fields will have an exceedingly hollow ring. The Democrats just can't have it both ways.

Example of Unnecessary Secrecy

EXTENSION OF REMARKS
OF
HON. JOHN E. MOSS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. MOSS. Mr. Speaker, there appeared in the New York Herald Tribune on August 21, 1960, an article by Allen M. Smythe, a financial writer, that illustrated the problem the press faces in getting information from the executive branch. Mr. Smythe's story dealt with an attempt to present full coverage of the cost of jet aircraft engines.

The significance of Mr. Smythe's story is that after he was initially refused the simple information of how much the Government paid for jet engines, he appealed to the House Government Information Subcommittee to assist him. As soon as the subcommitee made inquiry, the Department of the Navy reversed itself and released the information. It now appears, however, that only part of the information was released and so, apparently, we must go through the procedure again. Because of the significance of the subject matter of Mr. Smythe's story, as well as the information problem involved, I believe that the Members of the House would be interested in having his story available:

AIRBORNE ALERT COSTS ASTOUND CONGRESSMEN

(By Allen M. Smythe)

With international tensions becoming more irritating and Soviet diplomatic activitives more "truculent," congressional attention is being directed once more toward this Nation's airborne alert plans. These are for a continuous alert of our B–52 heavy bombers, a partial alert for the same, and the "standby" alert which is now being prepared.

Credulous members of House fiscal groups learned that a partial airborne alert for 10 wings of eight sorties might cost the taxpayers $800 million a year. Their curiosity led them to examine detailed costs. As a result, they have coined such phrases as "bejeweled powerplants" and "diamond-studded jets."

Continuous flying of heavy bombers does not wear out the airframe. The need is for spare engines, extra engine parts and an occasional landing gear.

Representative GERALD FORD, Republican, of Michigan, member of the powerful House Appropriations Committee, recently complained that "some of those little rods that are jet engine parts cost the taxpayer more than a new automobile engine."

Through some archaic regulation the Air Force must buy their J–57 jet engines used in the eight-engined B–52 bombers through Navy procurement channels. These Navy officers have consistently refused to release any prices on these engines because of the "proprietary rights" of the engine builder.

Under prodding from the Moss Government Information Committee, Under Secretary Fred A. Bantz, reversed the former Navy policy and wrote the Moss group that "prices paid by the Government for Pratt & Whitney engines" would be released.

However, only a small partial release has been made. The Air Force has given out all prices on the General Electric J–79 jet engine.

The J–57 jet engine made by Pratt & Whitney has been the workhorse for military aircraft for 10 years. It is now considered obsolete. Hundreds of millions of dollars have been spent on its development, improvement, and modification. The Navy refuses to give exact figures but some officials estimate that the Navy has spent $6 billion on this engine. Others say this amount is one-third too small.

The Navy has an inventory of 2,000 J–57's. The Air Force has 15,000. The last production order for Navy use had a unit price of $195,000. Some production orders have cost over $300,000. The Air Force reimbursed the Navy $226,000 for each of the engines used for the F model of their B–52 bomber. The engines used on the latest H model cost $192,000 each.

Spare parts for these engines add at least 30 percent to these costs. For arctic or desert use this may be raised to 110 percent.

A commercial version of this engine that is slightly heavier and much more reliable and which is mounted in the Douglas DC–8 jet airliner costs $154,000. This cost includes the modifications. Commercial airliners must have engines that can stand continuous use, while military aircraft engines stress lightness, fast climbing, and high ceilings.

The new, lighter, and more powerful General Electric J–79 jet engine is scheduled to propel most new military aircraft. Only 1,400 have been built and the production cost is around $275,000 each. Two Navy versions cost $310,000 and $340,000. Air Force officials believe this cost will be reduced drastically if and when production reaches the 4,000 mark.

Use of these powerplants in commercial airliners is being encouraged so that overall production costs can be reduced. A commercial version of the J–79 is used in the Convair medium-range 880 airliner at a cost of $164,500 each. The long-range Convair 600 mounts a turbo-fan model with an increase of $35,000 in price.

Hon. Paul Brown

SPEECH
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. SMITH of Mississippi. Mr. Speaker, one of the sad occasions of this session of the Congress is the realization that PAUL BROWN of Georgia, will not be with us in the coming year. He is going on to a well-earned retirement, but we in the Congress who have benefited from his leadership and advice will sorely miss him.

PAUL BROWN's career is in the best tradition of a southern statesman. He has stoutly defended the way of life of his people, and at the same time has lent his full contribution to progress for all the people of our country. PAUL BROWN is always a gentleman, fully understanding of the viewpoints of others, while stanch in his own convictions. I know that the people of Georgia, whom he has served so well, share the love and affection for him felt by all the Members of the House of Representatives.

Our American Heritage

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 30, 1960

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Harry H. Schlacht which appeared Friday, August 26, 1960, in the East Side News, a publication with wide circulation in the 19th Congressional District of New York:

OUR AMERICAN HERITAGE

(By Harry H. Schlacht)

Wherein lies the greatness of America? Because it is the home of liberty. Because it is the last refuge of free men under God. Because it is the place where we are privileged to utter the three precious words: "I Am Free."

The sturdy quality of our early American leadership was born of prayers and fellowship with God.

We can tread the earth upright and measure with the power of our brain and the sinew of our strength with our fellowman. We have a government which we help to make and an opportunity which we help to create. We are neither serf nor slave. We are free Americans.

Our future lies with those who will tear assunder the shackles of slavery and reassert their faith in man's dignity. Proud of the power of our country, we can be prouder still of our unflinching defense of the rights of man.

Our light of liberty took fire in the resurgent blessings of the teachings of the Sermon on the Mount. Our light of liberty has been kept burning through the blood baths of the years.

The anvil upon which our liberty was fashioned was a hard anvil. Its ring, when struck, was a ring of justice. Mighty hands and sinews of a superior strength struck against its hard surface before our liberty took shape and man became free.

The altar of man's liberty is the mountain of his hope. The altar stone of man's liberty has been sanctified by America's deathless dead.

It was here in America that man rose to the full height of his freedom. It was here in America that the dignity of God put about man the rich garment of the sonhood of God.

So long as truth prevails over falsehood, the foundation of our nation will be secure. The strength of America rests on the proposition that its people shall know that truth shall make them free.

Today there are traitors in our midst, who would sell their American birthright for a mess of Communistic sabotage.

There vile creatures are supporting a poisonous communistic philosophy which seeks the complete destruction of our moral, spiritual, economic and governmental ideologies.

Communism is born of deceit, avarice and lust. It is seeking complete domination over the lives, the thoughts, the hearts and prayers of the citizens of every nation on earth.

It would take the glory of his God from the Jew. It would take the Cross from the Christian. Once religion is destroyed, Communism is ready for its coup de grace.

The common man will find himself expendable in a labor camp or on a battlefield, or wherever the ruthless communistic leaders may wish to bring about his liquidation.

We will guard our precious American heritage. We will defend our precious American democracy. We will retain our precious system of free enterprise and man's right to work and live beneath the sun as a free individual.

Liberty will supplant slavery. Justice will supplant injustice. Democracy will uproot tyranny. Let us keep the ideals of our blessed forefathers alive and our democracy will always flourish.

Washington's Newspapers Deserve Praise in Handling Racial Listings in Real Estate Advertisements

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. REUSS. Mr. Speaker, I am happy to report that this month Washington's three daily newspapers—the Post and Times Herald, the Star, and the News—have abandoned the use of racial designations in real estate advertising.

Almost a year ago, on September 11, 1959, I introduced H.R. 9209, which would have prohibited newspapers in the District of Columbia from using racial designations in listing houses for sale or lease. In introducing the bill, I said—CONGRESSIONAL RECORD, September 19, 1959, page 17603:

Some people may cry that this is an attempt to withhold information. It is nothing of the sort. It is an attempt to curb deceptive advertising. An examination of houses designated as "colored" in these ads will show that very often they are in neighborhoods still predominantly white. The ads falsely suggest to homeseekers who do not know the city that the houses are in a Negro neighborhood. Such designations act as a traffic signal, diverting white homebuyers to one section of the city and colored homebuyers to another. As a result, they are an obstacle to any attempt to stabilize these changing neighborhoods as integrated neighborhoods. Worse than that, the designations are used by some unscrupulous real estate dealers to "break" blocks, stir panic selling, and perpetuate and extend segregated neighborhoods. Deceptive advertising and racial zoning is not the proper business of newspapers.

I regret to say that an example of a Federal area that continues this harmful practice is our Nation's Capital. The three major newspapers of the District of Columbia continue to list real estate by race, and show no disposition to examine the social and economic consequences of the practice. They have been listing houses by race for years and, though it is evident that the practice is a powerful force in creating racial ghettoes, the papers seem bent upon keeping things the way they are. This is the result, I believe, of inertia, not of any careful consideration of what their advertising practices do. Because the welfare of this city and other Federal districts is entrusted to Congress, I believe we must take action in this matter.

The need for action to achieve the national goal of equal opportunity in housing was emphasized in the report of the U.S. Commission on Civil Rights, which we received this week. My bill will materially aid this objective. I hope it will be promptly enacted."

A recent statement by the American Veterans Committee, through J. Arnold Feldman, its executive director, commended the three Washington papers for their forward-looking step. Mr. Feldman's statement reads in part as follows:

These racial designations in real estate ads have been an insidious influence in fostering racial segregation, racial ghettos, and racial tensions. Their elimination will greatly benefit the growth, welfare and stability of Washington's neighborhoods. The Washington newspapers have, by this change in policy, come into step with the newspapers in many other cities which no longer use such racial labels. Among these cities are Chicago, Cleveland, New York, Philadelphia, Detroit, Pittsburgh, Sacramento, Indianapolis, San Francisco, and others. Two States (Oregon and Colorado) recently enacted statutes prohibiting racial designations in real estate ads.

It is our understanding that the newspapers will permit reference to race in ads for rental of apartments and furnished rooms; but we further understand that such references will not be placed at the top of the ad, that the ads will not be grouped by race, and that racial references will not be compulsory, but will be included only upon the specific request of the advertiser.

The new policy represents a great step forward in eliminating a substantial stimulus to racial discrimination.

The three Washington daily newspapers deserve praise for their forward-looking action.

Hon. Edward H. Rees

SPEECH

OF

HON. JOHN YOUNG

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 29, 1960

Mr. YOUNG. Mr. Speaker, it is with deep regret that I have learned of the impending retirement of my distinguished colleague and friend, EDWARD H. REES.

I had the honor of serving with the gentleman from Kansas, Congressman REES, as a member of the Post Office and Civil Service Committee. EDWARD REES made a lasting impression on me as a man completely devoted to the trust the good people of Kansas placed in him, a man of integrity and the highest character. He shall be greatly missed as my colleague and friend. I want to take this opportunity to wish him the greatest of good fortune and good health in the years to come.

Money and the Platforms

EXTENSION OF REMARKS

OF

HON. ALBERT H. BOSCH

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. BOSCH. Mr. Speaker, much study and thought is now being given to the platforms of the Republican and Democratic Parties. Under leave to extend by remarks, I include an article by Dr. Charles A. Tonsor, Queens County, N.Y., which appeared in the August 25, 1960, edition of the Ridgewood Times. Dr. Tonsor's article points out the necessity for a sound dollar and the failure of the Democratic Platform to meet this necessity. I commend this very lucid explanation of the situation to my colleagues:

MONEY AND THE PLATFORMS

(By Dr. Charles A. Tonsor)

The Democratic platform reads: "As a first step in speeding economic growth, a Democratic President will put an end to the present tight-money policy." The pertinent question is, how?

Interest rates are determined not by the President but by an independent Federal Reserve System, a bankers' bank created under the Presidency of Woodrow Wilson and spearheaded by Carter Glass, Senator from Virginia. The President has no control over this system nor has Congress; the latter only to abolish or amend the act creating it.

The Federal Reserve System was created to stabilize our monetary system. Prior to its creation we had "money" panics every so often because money was plentiful in some places and scarce in others, or because overspeculation had used up money in ways that hindered rather than helped the economy.

The Federal Reserve System was designed to smooth out these peaks and depressions and thus keep our economy on even keel; and it has been doing just that.

How does it do that? By making money tight when too much is demanded for speculation and easy when not enough is demanded to make things go. At once it is apparent that the business situation and not the President or the Governors of the Federal Reserve System are responsible for tight or easy money.

When the demand for money exceeds the visible supply, it forces the System to increase money rates, i.e. interest, to decrease the demand. When the supply exceeds the demand, it decreases interest rates to stimulate demand.

In addition to the interest rate, the System seeks to increase or decrease the supply of money through the sale or purchase of bills or trade acceptances in the open market. Bankers loan money on bills. When they have loaned all they can and need more money, they take these bills to the Federal Reserve System and discount them, i.e. re-

ceive money for them at the prevailing rediscount (interest) rate.

When the System enters the open market, its purchase of bills decreases the supply, hence supports the price level. When it sells, it increases the supply, hence again supports the level. How is a President to interfere with this?

Business conditions and not the action of the System determine what is to be done.

The Republican platform in this writer's opinion, is more in line with economic commonsense. It guarantees the use of the full powers of the Government to prevent the scourges of inflation and depression and the maintenance of a stable dollar as an indispensable means of progress. Inflation is entirely under the control of the administration.

If it takes no heed to balancing the budget it will bring on inflation. We are witnessing that in Cuba now; the inflation must ultimately result in runaway inflation if the printing press is called upon to produce the difference between income and outgo, just as is now happening in Cuba with its $300 billion of printing press money at the moment.

The Democrats have not mentioned the sound dollar, but unless they keep the dollar sound, they could bring on a bigger depression than that of 1929. What is a sound dollar? One that is based on gold, a medium of exchange that has universal acceptance.

The currencies of the world that are strong are based on gold * * * gold which is deposited at Fort Knox because the country's currency is tied to ours, because ours at the time was the soundest in the world.

From many points of view, what either Democrats or Republicans will do about the dollar depends on what the world situation forces them to do. With the bulk of the free world's money reserves held here in the United States in U.S. dollars, we can no more afford to abandon the soundness of our currency than we can afford to abandon the efficiency of our military defenses.

Gold has been leaving the country causing some to keep a sharp eye on the situation. The reason may be that other nations have recovered from the shock of World War II and are playing a more constructive role in the world economy.

If, however, the outflow is a result of loss of confidence in the dollar by foreign governments and central banks, we are headed for trouble that the Democratic platform may intensify. That this may be true to some extent is shown by the fact that the flight from the dollar, or foreigners cashing in short-term dollar investments in the United States to get back gold, occurred when our budgetary deficit was largest. The Republican platform seems to meet this situation by its control of inflation.

In any event, no matter what the rhetoric of the platforms, we must have sound money or else.

American Athletes at the Olympics

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. LINDSAY. Mr. Speaker, I think we should stop for a moment to reflect on the marvelous achievements of our American athletes at the Olympic games in Rome. Daily reports of the excellent performances of these young men and women pay tribute to them for the years of arduous training and effort they have put in to achieve the very highest level in athletic prowess.

But amidst these marvelous feats of athletic accomplishments the greatest tribute we can pay to these youngsters is to focus attention on them as representatives of American youth. It was with a great sense of warmth and pride that I read the accounts of the tremendous welcome that was given to our standard bearers when the team entered the Olympic Stadium. The accounts clearly dispel some of the reports we sometimes hear about the regard in which Americans are held abroad. The tumult of 100,000 unrestrained cheers of persons from all nations when the bearers of the Stars and Stripes entered the stadium justifies our confidence and support of these outstanding young Americans. They represent the finest in American traditions and more so they are among our best missionaries for good will. I salute them and I ask my colleagues to join with me in wishing them well.

A New and Great Opportunity for Our Country and Hawaii

EXTENSION OF REMARKS
OF
HON. DANIEL K. INOUYE
OF HAWAII
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 30, 1960

Mr. INOUYE. Mr. Speaker, it is quite evident that this Congress and our Nation as a whole has become acutely aware of world tensions and the pressing need to alleviate and, preferably, to eliminate these tensions through bold and perhaps new approaches. As has often been said, there is a need to reach, directly, the people of the rest of the world rather than merely concerning ourselves principally with government. This idea is encompassed in the establishment, recently, of the Center for Cultural and Technical Interchange Between East and West in Hawaii.

I have this date introduced in this House a bill to complement the intent and purpose of the East-West Center; namely, that of bringing better understanding between our country and those countries on the Pacific basin. My bill would help in this respect by stressing the development of trade and interchange of the products of the Pacific cultures to the primary objectives of sound economics and world peace through the establishment of a trade center in Hawaii. Its effect and operations are better explained by Mr. Lorrin P. Thurston, publisher of the Honolulu Advertiser, in his talk to the Social Science Association of Hawaii on June 6, 1960, entitled "A New and Great Opportunity for Our Country and Hawaii."

Mr. Speaker, under leave to extend my remarks, I respectfully commend Mr. Thurston's speech to the attention of my colleagues:

A NEW AND GREAT OPPORTUNITY FOR OUR COUNTRY AND FOR HAWAII

(Presented before the Social Science Association of Hawaii, June 6, 1960, by Lorrin P. Thurston, publisher, Honolulu Advertiser)

I will attempt to draw for you tonight a word picture of what I believe is a new and great opportunity for our country to make real friends throughout the Pacific and for Hawaii to enjoy greatly increased prestige, business, and travel as a byproduct.

My chain of thought was started some 10 years ago when the amazing success which has attended the building of International House in New Orleans, first came to my attention.

Because of Frank D. Roosevelt's desire to build our South American good-neighbor policy, forward-looking businessmen in the city of New Orleans decided that with enthusiasm, cooperation, and with some of their own hard-earned cash—they might accomplish quite a bit of value to their city and themselves by increasing the tonnage of freight flowing through their port, both incoming and outgoing.

And so what they chose to call International House was founded at a cost of about $3 million.

It was decided that the services which International House could render should be in three divisions—and that they should be developed simultaneously.

First, they took over an entire office building, wherein all of the consulates and their official staffs were quartered and business offices for transient importers and exporters were provided. They made available bi- or multi-lingual secretaries to any who needed them. They provided private dining and meeting rooms—featuring excellent food—plus a large dining and meeting hall, suitable for official dinners. There were made available limited hotel facilities for foreign businessmen and everything provided for their comfort, on a cost basis.

An International House staff was organized to help visiting businessmen contact American distributors, set up meetings with potential buyers, help South American businessmen with their displays in the Merchandise Mart, and generally acted as if they were on the personal payroll of these visiting or interested merchants.

Second, they established a 10-story Merchandise Mart. With growing official interest, an enthusiastic staff was recruited, which next visited the businessmen of the Caribbean and all South American countries, urging upon them the maintenance of continuous displays of their products in the ideal surroundings provided and to use the staff of International House to build up their American business in every possible way.

Finally, they enlisted the cooperation of the U.S. Government and their own Louisiana State government, who turned over to International House a small island in the Mississippi River, easily guarded and with good warehouses for use as a bonded and free port area, where foreign merchandise could be stored, pending sale—or completed and stored, until sold—when normal customs duties would be paid; or where goods could be returned without customs duty to port of origin—if they proved unsalable in the American market.

With these three departments of physical plant completed the staff then really went to work. Their list of exhibitors grew steadily. More and more merchants had the free services of International House brought to their attention. Suspicions were undermined—sales were accomplished and business really started to flow through the port of New Orleans.

I visited International House in 1951, curious to know what made it work, and I found out in a hurry. Enthusiasm and the ideal of helpful service.

International House had as its principal objective helping foreign businessmen to expand their sales within the United States and at the same time they helped exporters of the United States to find sales outlets, banking facilities, personnel, etc. with which to man their offices in these same foreign countries, overcoming the language barriers, the redtape of customs barriers, the delays of consular visas, etc.

It was indeed a two-way street. Ocean shipping tonnage jumped by leaps and bounds—until in the space of a few short years, New Orleans has risen from 17th to 2d—second only to New York as a port of entry to the United States.

International House is now going through its second major expansion and Mr. George Chaplin, present editor of the Advertiser—who was one of its directors for 8 years and is here tonight as one of my guests—told me that the raising of $9 million for their new plant was accomplished last year with much less difficulty than their first plant. International House had truly benefited those who used it.

And so this idea—not new—but tried, tested, and proven came to me—why shouldn't the U.S. Government—in continuous quest for ways of winning friends and influencing people in the entire Pacific area—become the sponsor of a Pacific International House capitalizing on every proven function of its New Orleans counterpart, but enlarging materially the scope of the services to be rendered?

Here in our front yard, we have an unused, priceless asset, Sand Island—with an area of nearly 700 acres, with no permanent buildings of any kind which would have to be demolished, with deepwater shipping facilities, easily policed and guarded, with its own sand beach, situated about halfway between the International Airport and Waikiki, easily accessable to the business offices of Hawaii, and to U.S. and State Government offices, and to thousands of American tourists. A visit to this merchandise mart could be made a must.

Why not go a step farther than International House in New Orleans and set up Sand Island by U.S. Government and State proclamation and deed as extra-territorial land—a gift of the Federal and the State Government to the countries and businessmen of the Pacific, to be owned and administered by them, just as the United Nations Building and land area is in New York?

Set up a complete duplicate of the New Orleans type of service, but go much further by having the permanent merchandise displays as complete as possible from every country—giving all of the space that each industry of every country involved felt was of practical value—a gift of our Government—with the sole purpose of helping the businessmen of the Pacific—to help themselves and increase their business.

Why not invite the architects of each country to design the buildings to house their own country's displays—work out the vast floor space necessary and tie in their plans and suggestions with our own Nations architects—to work out a truly unique and permanent trade and cultural center?

Why not centralize all of the consular offices and our own Government passport offices on one convenient floor in the new office building, and then undertake another step that no one has undertaken before?

In the vast area, dedicated to the service of the businessmen of the Pacific, set up an East-West cultural and educational center, even as that which is now being backed actively in the present session of Congress.

Establish schools where foreign students to the United States could have an indoctrination training course for a year, learning American customs, dress, manners, language, slang.

In Hawaii's atmosphere of tolerance and understanding, with many representatives of their country's industries constantly available for friendly council and advice, I believe wonders could be accomplished.

Then let these students go on to the American colleges of their choice, better equipped, in every way, to capitalize on their great opportunity.

And side by side with them, have indoctrination courses setup in reverse, teaching the language, customs, history, and backgrounds of the countries of the Pacific under the finest teachers available, where representatives of our Government, or of the businesses of America, who wish to work in the countries of the Pacific could secure their own indoctrination and training so that they would not have to go out as untrained "ugly Americans."

Provide for these east- and west-bound students, the finest library that each country, involved, could contribute. Have it the center of knowledge of the entire Pacific area, with new worthwhile books being constantly added, until its library should become world famous.

And for the businessmen of the countries of the Pacific who would come here to supervise the sales of their products and learn how to design products with greater sales value, and for the buyers from America and the rest of the eastern world, build a 5- or 600-room hotel where they could be given every courtesy and service which would be helpful, where they could entertain buyers or their opposite members from America's businessmen.

And to further stimulate trade understanding and friendship, provide a really complete convention hall, to seat 5,000 people, air conditioned and with the finest staff of bilingual translators and headphones available, so that speeches in Chinese, Japanese or any language, could be brought to all listeners—translated instantaneously into the language they know best.

A convention department should be established to stimulate conventions at the center, each month of the year, giving businessmen from the East the opportunity of meeting with businessmen or students, scholars, scientists, doctors, geophysicists, bankers, manufacturers or what have you from the West, to hold their meetings under the most ideal circumstances an intelligent sincere management could provide.

Another staff project should be to see that ever-changing new merchandise was made available for display and sale—sale, not in the trade center, but through established business houses in Honolulu.

These displays and conventions should be constantly publicized throughout the press and trade journals of America in paid and in free space, and such similar sources as would be most helpful in each Pacific country.

The operating staff should also have ample funds—again Government supplied—at least for 10 years or until a fair amount of time has passed to prove the value of the project, funds which would enable them to travel whenever and wherever was necessary to carry on the vast publicity activity which would bring Pacific International House and its services constantly to the attention of businessmen who could profit by using it.

There would also have to be homes and recreation facilities on the island for the permanent business staffs who would be assigned there for duty, in the offices and exhibits, and possibly even schools for their children.

And in the third area of service there should be a free port and bonded warehouse area where merchandise could be stored for filling orders; where unfinished goods could be completed and then released for sale with duty only then being applicable.

I cannot help but visualize the absolute electric effect in Japan, for example, if our Ambassador, at the request of the President, were to go before the Diet of Japan or its modern equivalent and extend this invitation to the leaders of every business in Japan to get together, organize and plan with their own leaders and architects just how much space they needed to adequately and with beauty and dignity, display the products they are making, all at the expense of the U.S. Government.

Every businessman would get into the act. He would want his industry to be well represented. If his business prospered he could not help but be grateful and friendly to a nation that for the first time in history would not try to tell him how to do the things he knows best, but help him to display, improve, and sell them.

The businessmen of the Pacific area with whom I have discussed this idea have been unanimous in their instantaneous approval. Their common reaction has been a "what can I do to help? It is a wonderful idea which would do a great deal of good."

And what would Hawaii get as a byproduct of this activity in all of its ramifications?

I believe Hawaii would become the very hub of business in the entire Pacific area. Thousands of buyers and sellers would meet here, halfway between the Orient and Washington—each saving in time and in travel expense.

For students and those in the cultural center it would give a background and environment of many of their own people, constantly coming and going, which would be most important to them. To our American businessmen it would give them an opportunity to get their representatives' own feet wet in the ways of the countries of the Pacific before they were turned loose and put on their own.

To the participants and representatives of businesses who would be manning the displays, the offices, and handling conventions, it would give an unparalleled opportunity to rub shoulders and work in friendship with people from other Pacific countries and build lasting friendships which could not help but aid the cause of peace, mutual trust, and understanding.

The merchandise mart would be of outstanding interest to every tourist visiting Hawaii. It could be made as much of a must as the trip through Pearl Harbor.

Some years ago I learned that in the dreams of our State road planning department it had been suggested that Ala Moana Boulevard should be diverted out by pier 1, thence under the harbor by tunnel to Sand Island, thence on to the International Airport, bypassing the entire downtown business area.

If our State capitol could be placed on the Kewalo side of the harbor entrance and Pacific International House, with all of its ramifications, built on Sand Island side, what a splendid front door the State of Hawaii would have.

And the cost? What would it be? I would say perhaps $90 million for the original plant, with $10 million a year for complete operating expenses, plus whatever additional cost would come as a byproduct of the Cultural Center's costs.

Too much, you will say? Well, bear in mind that we are spending $3,200 million today of your money and mine for foreign aid, arms, and propaganda. Would one-third of 1 percent of this vast sum the first year, for plant, and one twenty-seventh of 1 percent thereafter be too much? I do not think so.

And, finally, what has been done about this fantastic dream to help possibly bring it to reality?

During my last five visits to Washington, in the closing 2 years of the statehood campaign, I talked continuously about Pacific International House.

First, I tried it out on Secretary Seaton, of Interior. He asked that I write him a memo on the whole concept, which I did. His reaction was that it was novel and certainly a worthy field of endeavor on a national scale, which had never been tried; then on two occasions, I discussed its possibilities with Vice President NIXON, who got the picture immediately, because he is completely aware of the great success and contribution that International House in New Orleans has made to our business and friendly relations in the Caribbean and throughout South America.

And to Colonel Gray, permanent Secretary of the Cabinet, Senator Pat McCarran of the Senate Foreign Relations Committee, who is most enthusiastic, and indirectly to the President who reportedly said it was certainly worthy of study; and by Seaton with Secretary Dulles, then Secretary Herter who liked it, but as in the case of the East-West Cultural Center, did nothing; and to Robert Close, president of General Dynamics Corp. at his request.

I have discussed it with Senators LONG and FONG and DANIEL INOUYE. LONG said he felt it epitomized the role which Hawaii could and should play in the Pacific area—that it should be done before Sand Island is lost for all time to routine business development.

And to Jack Burns, who now feels that he indeed is the father of the idea, and before a confidential group of 16 corporation presidents in New York, through the invitation of Sam Pryor, vice president of Pan American, who strongly backs the whole concept.

The idea has been expressed by one astute political observer, that a local committee should be gotten together, that the hat should be passed, that the Governor, legislature, chambers of commerce, etc., should be worked on. To me, however, it seems as if the idea, of real national importance, should be sufficiently worthwhile that the State Department or those in it, who have so much to say regarding our foreign policy, should seize upon the idea and boost it.

Well, that has not happened. I would hate to get the project into a pork barrel realm, where Los Angeles, San Francisco, Seattle, or others might immediately want to get their feet into the trough, and claim that theirs was the gateway to the Orient; that if that kind of money were to be spent they want it for their city.

Backers of the East-West Cultural Center have done splendid work. I believe that before the present session of Congress adjourns they may be successful in securing an appropriation of the necessary funds with which to go ahead.

While present plans call for the center being built on University of Hawaii lands even this could be restudied if the Sand Island project could be moved ahead.

The angle which I am perhaps too naive or inexperienced politically to understand, is "why shouldn't our State Department take a good look at this whole suggestion and back it wholeheartedly, if they believe in it?" Why should we, as citizens, have to do all the many things the proponents of the Cultural Center are having to do—to try and get Congress to act?

Why can't the State Department, with vast sums at their disposal, take the lead? Why the hesitation and lukewarm support, when they know the Russians have seized upon the idea of the Cultural Center and have already appropriated the money, and have a vast foreign students training program in operation while we are still fighting for action.

FONG, LONG, and INOUYE are heading the fight for the Cultural Center, but it should be the Foreign Relations Committee of the Senate as a whole who should be taking the leadership, backed up by the State Department itself.

There is no chance of Pacific International House making any progress in the present session of Congress—but the idea will be just as worthwhile next year, as it is now. Perhaps even more so.

My greatest fear is that with the ever greater need for industrial land, Sand Island, which is the finest possible location for such an undertaking, will be lost to uses which, while important to our own economy, cannot compare with its use as the permanent site of Pacific International House.

Here is another angle which should be considered.

I know that even now airlines are planning direct flights to all parts of the Pacific, on a nonstop basis from principal mainland cities. The time is not too far ahead when thousands of transpacific travelers will be flying over us.

Already Gander in Newfoundland and Shannon in Ireland are being bypassed by transatlantic flights. They are precedents for what we can perhaps expect here in Hawaii.

Possibly we of Hawaii must assist in furnishing reasons why people should stop in Hawaii. Perhaps if we do not see ahead far enough, we are going to lose out in many ways as far as the development of the Pacific area is concerned and Hawaii may lose out on even its present ability to act as a catalytic agent for the creation of friendship and understanding between Americans and the peoples of the Pacific.

From 1945 until 1959 I devoted a large part of my time to the chamber of commerce, Hawaii Visitors Bureau, Pacific Area Travel Association, broadening our tourist travel to the neighbor islands, and the cause of statehood.

I haven't the time at this point, to drop all else and devote my energies to trying to put this idea over, but if any of the members of this venerable association have suggestions as to how and why Pacific International House can be brought about, I'm certainly willing to listen. I hope the plan has enough merit not to die unborn.

Hon. Edward H. Rees

SPEECH
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. McINTIRE. Mr. Speaker, it has been for me a prime personal pleasure and privilege to have had the acquaintanceship of the Honorable EDWARD REES of Kansas.

During the 9 years I have been in Congress, I have known ED REES to be generous and expert in his counsel on legislative matters, and with it all he was extremely kind and thoughtful.

He has been a truly devoted servant to his district, State, and Nation, just as he has been a key figure in the House of Representatives.

ED has been a distinguished member of the House Committee on Post Office and Civil Service, and his record in this area is replete with efforts directed toward sound legislation designed to create efficient Government service and provide just rewards for Government employees.

By all standards ED REES has well earned the comforts of a less strenuous life, but his personal gain will prove a loss to the House of Representatives.

Mrs. McIntire joins with me in extending to ED and Mrs. Rees our warmest and best wishes for health and happiness in their many years that lie ahead.

Col. James Gaynor, U.S. Army

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. BRAY. Mr. Speaker, 3 years ago a fellow Hoosier was assigned to the Office of Legislative Liaison, Department of the Army, as Chief of the Legislative Division. He has done a superior job in this assignment and has earned the respect of all who have had association with him in this job. No man could have served the Army better in this assignment which has been extremely difficult at times; and his fair, kind, and efficient handling of those problems with which he was confronted has added to the prestige of the Army.

It is no accident that Col. James K. "Jim" Gaynor has done an outstanding job, for he has always performed in that manner. During two of the years that he attended Indiana University he was managing editor of the Star-Courier, where he was highly regarded by all who had contact with him. He holds B.S. and J.D. degrees from Indiana University and LL.M. and S.J.D. from George Washington University. He is accomplished in the world of sports and was an accredited umpire in following leagues: Arkansas State League, Nebraska State League, Western Association, North Carolina State League, Northern New York-Vermont League, Pennsylvania-Ontario-New York League, Three-I League, American Legion Junior National Finals at Omaha, Detroit, Denver, and Miami.

Colonel Gaynor has had a distinguished military career which included a tour as judge advocate of the Ryukyus Command in Okinawa.

Colonel Gaynor has written many outstanding legal articles, the latest of which is his book "The Army and the Congress," soon to be published, which is very informative and challenging.

We are happy that, although Colonel Gaynor is leaving his present assignment, he will still remain in Washington as a member of the board of review of the Office of the Judge Advocate General. Capitol Hill, especially those of us from Indiana, wish Colonel Gaynor the best.

Suicide, Like Blasphemy, Is Intrinsically Evil

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 30, 1960

Mr. RABAUT. Mr. Speaker, by now all of us have heard and read literally thousands of words concerning the ill-famed U–2 incident. From the actual flight through the collapse of the summit meeting in Paris and the cancellation of Mr. Eisenhower's invitation to visit Russia to the trial of Gary Powers, the whole incident has received a tremendous volume of news coverage. However, there is one aspect of the flight which, in my opinion, has not been accorded the degree of attention which I believe it merits. This is the idea that the U–2 pilot, Gary Powers, evidently had instructions and was equipped to destroy his life rather than be captured. This very concept involves basic moral issues which in the true order of things transcend considerations of national policy. This point has been very well covered in an editorial in the recent issue of the magazine America, under date of September 3, 1960. I would like to insert this editorial into the RECORD at this time and to invite all my colleagues to weigh very carefully the premises and questions it poses:

WHAT ABOUT SUICIDE?

The indictment in the U–2 spy case stated that "Powers was provided with a special pin with a lethal poison." It is to the credit of this man that he ignored the unwritten law of espionage agents and refused to make his exit "with a bare bodkin."

Although we have already expressed traditional Christian attitudes on suicide (America, June 18, p. 371), the issue is basic enough to warrant specific emphasis on a few points.

The radical malice of calculated self-destruction lies in the fact that it infringes the exclusive dominion of God and fractures one of the essential axes of human development. These lesions of right order put suicide in the category of actions which, like blasphemy and adultery, are intrinsically evil.

The peculiarity of intrinsically evil choices is that they are always and with qualification wrong and therefore proscribed. There is no such thing as a "moral feedback" whereby the splendor or apparently compelling necessity of motives can transform that which is crooked by essence into a beeline for heaven. No Christian witness, thrust into the Colosseum, could excuse apostasy and Caesar-worship by pleading: "It was such a big lion and such a teeny-weeny pinch of incense that I dropped on the altar." Judas' crime would have remained the betrayal of innocent blood, even if his paymasters had tempted him with the throne of David and a permanent niche in Israel's Hall of Fame.

On the other hand, there is what might be called a perilous "moral irradiation" in letting the end justify the means in the question of suicide. If suicide is right for any reason, such as safeguarding national secrets, the way is open for permitting it in order to preserve honor or escape the intolerable pain of terminal cancer. The original concession made to fine motives becomes an opening wedge for a general assault on all the sanctities of life. The transition is easy from permissible suicide to legalized euthanasia and all the horrors of a political eugenics program such as the one Hitler imposed in the last monstrous years of the Third Reich. How such trends can maximize themselves is clear from the analogy of contraception. Condemned by the churches generally within living memory, it was by turns tolerated, approved, and encouraged. Today some clerics are even prescribing it as the uniquely Christian duty vis-a-vis the population explosion.

It is plain, of course, that if suicide is wrong in itself, then the State may not condone, abet, or command it. Hobbes called the State a "mortal god," but this temporal deity cannot modify eternal canons; it may fancy itself to be a "great Leviathan," but all its portentous bulk cannot tip the scales in the moral universe.

Apart from essential morality, there is a dreadful thesis lurking in the claim that the State, for overriding reasons of policy, can order its agents to do themselves in. This is the thesis that inalienable rights may be sacrificed to national interests. Such a thesis strangely smacks of totalitarianism, whose basic position is that the individaul exists in order to serve the State. It is a denial of our own public philosophy of government.

More than that, it is a denial of the Christian truth that, in his personal being, man is not ordered to the utility of society. On the contrary, the community exists for man. This is a truth that Pope Pius XII often emphasized, as well as its corollary, viz., that every attempt by the State to dispose directly of the physical being of its members is wrong.

We preach morality and the public philosophy in season and out, lest the "descending curve of morality" touch the zero mark, never to rise again.

Medical Care for the Aged

SPEECH
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. FARBSTEIN. Mr. Speaker, although over the past 2 years voluminous evidence has been adduced to show the urgent need for Federal legislation to provide medical care for our older citizens, this Congress has taken only a faltering step forward. Although it has been shown that many senior citizens are pushed to the limit of their financial resources by medical bills, while others forego or delay treatment because of inability to pay, the Congress has failed, in my opinion, to meet its responsibility to our senior citizens.

Instead of passing the Forand bill, or a Forand-type bill, which afford the social security approach to this problem, the bill that was passed provides for Federal grants to States to enable the States to increase their expenditures for medical care to old-age recipients, and to enable them to institute programs of medical assistance for the aged. Where a Forand-type bill would have made unnecessary a means test and would have given medical assistance to our senior citizens as a matter of right, the bill that was passed would only afford assistance to those who can pass a means test or a test which will disclose the fact that the needy individual is unable to afford to pay for any medical care.

But this is only half of the problem in connection with this bill. It is necessary, before the law can become effective, that the States adopt legislation calling for a program of medical assistance to the aged before any call upon the Federal Government for contributions. Although it is true, if a State decides to participate, it may determine the amount, scope and duration of benefits and, within broad limits, the eligibility standards, I fear there will be too few States which will adopt the necessary legislative programs.

There is provision in the bill, if adopted by the States, and the State program accepts the same, that medical benefits cannot only be received by those needy individuals receiving old-age assistance, but those aged individuals who, although financially independent so far as their daily living requirements are concerned, cannot meet the medical bills which occur frequently. The new program would be designed to prevent aged persons from becoming indigent on account of medical expenses. The benefits under the bill may be made available almost immediately, if adopted by any State government.

The passage of this bill does not mean the end of the fight for medical care for our senior citizens. This is merely the beginning. I am certain that next year there will be reintroduced a bill which will contain the social security approach providing insurance against the cost of hospital, nursing home and surgical care for persons eligible for old-age and survivors insurance benefits. Such a bill will obviate the necessity for any means test and will permit all our citizens to support themselves in their old age by making small contributions during their working years.

At least the problem has been recognized. The conservative combination in the Congress had permitted only a slight step forward to be taken. I am certain that this step will be lengthened in the years to come.

Hon. Leo E. Allen

SPEECH
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. McINTIRE. Mr. Speaker, may I add to the comments of my colleagues by expressing my appreciation to LEO ALLEN for the sound counsel and warm friendship that he has extended me in the 9 years that it has been my privilege to serve in the House of Representatives.

LEO ALLEN has rendered distinguished service to both his State and his Nation.

We shall miss his stalwart defense of sound principles of government.

I extend my very best wishes to LEO and Mrs. Allen, and I express the sincere wish that their years ahead will harbor a bounty of good health and a great harvest of happiness.

A Tribute to George Washington Carver

SPEECH
OF
HON. HERMAN TOLL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

Mr. TOLL. Mr. Speaker, as the unquestioned giant of this and all future generations, science has come to dominate the attention of the world. And America is justly proud to find so many of her sons dedicated to scientific pursuits.

Among our men of science, a few stand out in exceptional splendor, for service to a cause worthy only of the clearest intellect. Included in the group—as one of a select, special nucleus comprising the most ingenious of all—stands George Washington Carver, the "Wizard of Tuskegee," and the miracleman of agricultural chemistry.

Entering American society as a slave of the Civil War era, George Washington Carver rose quickly to academic recognition, and upon joining the staff at Tuskegee Institute, Ala., soon claimed the attention of the scientific world.

The work of Dr. Carver centered in the preservation of our soil and to this end he proposed the planting of peanuts as a substitute for cotton. Certain of the scientific principles involved, Carver was also a practical man, and therefore set out to improve the economic status of the peanut; a course which carried him not only into the field of economics, but medicine, as well.

When finally he concluded his experimentation, Dr. Carver had developed hundreds of new uses for the peanut, including an oil for the cure of paralysis. In consequence, the farmers of the Southern States found a wide market for peanuts, which soon became a major money crop in the southern economy.

Captivated by so astonishing a performance, the Royal Society of Arts of London admitted Dr. Carver to its councils in 1916, and the scientific community hailed him as one of their most distinguished leaders. Thereafter, Dr. Carver was showered with honors and hired as an expert in his field to advise in the operation of a branch of the U.S. Agriculture Department.

A pioneer in the professional sense and a hero in the personal sense, he has earned the appreciation he receives today from every corner of the globe. All America is proud to join in honoring this man of genius and conscience whose service to mankind shall never be forgotten.

Tool Steel Makers See Import Threat—Call Any Cut in Tariff Folly, Hit Labor Costs

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 30, 1960

Mr. DENT. Mr. Speaker, as each day passes, more and more industries in my district and no doubt in other districts of our great Nation, find themselves pushed to the wall by imports from low wage, low standard producers in foreign countries.

At first the importation of foreign goods was like a mild cold but it has now become a dangerous case of pneumonia with Congress sitting idly by refusing to administer the proper medicine.

The proper medicine in this case being a clamping down on further tariff reductions and certainly stopping any further increase in quotas on all imports that compete with American production and labor.

We have heard so much about the Russian threat of an economic war that maybe we ought to at least give them credit for protecting their own domestic market, their own industry and their own workers.

The Russians are not permitted to see any imported product at a price less than that charged for a Russian made product.

I am sure our American industries and our American workers are entitled to some consideration since many of the foreign production facilities have been built with their tax dollars.

I present for the RECORD the presentation by Jim Gill, chairman of the Board of Vanadium Alloys Steel Co., Latrobe, Pa., before the Tariff Commission:

[From American Metal Market, Aug. 25, 1960]

TOOL STEEL MAKERS SEE IMPORT THREAT—CALL ANY CUT IN TARIFF FOLLY, HIT LABOR COSTS

WASHINGTON.—Producers of tool steel in the United States warned the Tariff Commission today that rising tool steel imports are threatening to export jobs of American workers.

The hearings were in protest to possible tariff concessions by the United States at the coming General Agreement on Tariffs and Trade negotiations.

Speaking for the industry, James P. Gill advised the Commission that foreign producers, with their lower labor costs, are able to sell their steels in this country at prices American companies cannot meet.

Mr. Gill, who is chairman of the board of Vanadium Alloys Steel Co., Latrobe, Pa., reminded the Commission that the tool steel industry is of strategic importance from the standpoint of national security, and declared, "any further reduction in the tariff rates on tool steel would threaten serious injury to the domestic industry."

"While costs of items such as scrap and power are somewhat similar here and abroad," Mr. Gill acknowledged, "the real difference lies in labor costs. This factor is even more important to tool and fine steel producers because it takes a great deal more labor to make a ton of tool steel than a ton of average steel produced on a high tonnage basis."

Canada was listed as the only foreign country whose tool steel industry paid hourly wages even approaching that of the American industry.

The 1959 hourly wage figures for the world's foremost producers of tool steels, in terms of American dollars, according to the committee, compare as follows: United States, $3.14; Canada, $2.45; Sweden, $1.12; United Kingdom, 92 cents; Belgium, 82 cents; West Germany, 76 cents; France, 52 cents; Italy, 50 cents; and Japan, 50 cents.

American companies have little or no advantage over foreign competition in productivity, Mr. Gill said, because "I know from personal observation and experience that productivity in European tool steel mills does not differ greatly from productivity in our own plant in the United States.

Most Canadian and European mills also have fine, modern equipment and production methods, he added.

IMPORTS RISING

The spokesman pointed out that although tonnage steel imports so far in 1960 have declined from the 1959 rate, imports of tool steel have increased sharply over last year. This rise is significant because 1959 reflected a big increase over 1958 tool steel imports. Imports under two major classes of alloyed bars in 1959 amounted to 6.5 million pounds. This was more than double the 1958 import figure of 3 million pounds.

Last year's large increase was not due to the steel strike that took place during the last half of 1959, he remarked. Imports during the first 4 months of 1960 already amount to 4.6 million pounds, which is nearly double the annual rate in 1959. Furthermore, he added, most of the American tool steel industry was not struck, and U.S. producers had at all times ample stocks of tool steel in warehouses.

As a further indication of the trend toward increased tool steel imports, Mr. Gill cited statistics on alloy content which more positively indicates the types of steels imported. He compared the dutiable amounts of vanadium, tungsten, and molybdenum—all three of which are used chiefly in tool steel.

The 6.5 million pounds of alloyed bars imported in 1959 contained 25.1 thousand pounds of dutiable vanadium, 81 thousand pounds of tungsten, and 73.8 thousand pounds of molybdenum.

The comparable figures for 1958, in thousands of pounds, were 7 vanadium, 21.3 tungsten, and 17.6 molybdenum. Thus, the alloys chiefly used in tool steel increased nearly four times while imports of the steel under broader classification were little more than double.

In the first 4 months of 1960, the 4.6 million pounds of imported steel bars contained 20,000 pounds of dutiable vanadium, 65,000 of tungsten, and 54,700 of molybdenum.

The Nation's large tonnage mills, Mr. Gill said, have neither the equipment nor technical knowledge to make the tool steels and special steels needed for missiles and similar items.

Fifteen steel companies were represented in the statement.

The 15 include Allegheny Ludlum Steel Corp., Pittsburgh, Pa.; Bethlehem Steel Co., Bethlehem, Pa.; Braeburn Alloy Steel Corp., Braeburn, Pa.; the Carpenter Steel Co., Reading, Pa.; Columbia Tool Steel Co., Chicago Heights, Ill.; Crucible Steel Co. of America, Pittsburgh, Pa.; Firth Sterling, Inc., Pittsburgh, Pa.; Ingersoll Steel Division, Borg-Warner Corp, New Castle, Ind.; Jessop

Steel Co., Washington, Pa.; Latrobe Steel Co., Latrobe, Pa.; Simonds Saw & Steel Co., Lockport, N.Y.; Steel & Tube Division, the Timken Roller Bearing Co., Canton, Ohio; Universal-Cyclops Steel Corp., Bridgeville, Pa.; Vanadium Alloys Steel Co., Latrobe, Pa.; Vulcan-Kidd Steel Division, H. K. Porter Co., Inc., Aliquippa, Pa.

Poison Labeling

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 30, 1960

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I read with interest in the Oakland, Calif., Tribune, July 22, 1960, a thoughtful column entitled "Mother Helped Put Antipoison Label Law on Books." I also noted this United Press International report in many other leading newspapers, including the Terre Haute, Ind., Tribune, July 24; Albuquerque, N. Mex., Journal, July 25; Syracuse, N.Y., Herald-Journal, July 25; and Baton Rouge, La., Advocate, July 28. Mrs. Patricia McCormack, who dug up and reported this story, is a veteran reporter and feature writer for UPI, who specializes in national features entitled "Woman to Woman," and "Child Care Today." Through her efforts, my colleague, THOMAS B. CURTIS of St. Louis, Mo., is being given just recognition for the years of work and effort he has engaged in so that this law might be passed. As the father of three children including a teenager, I know firsthand how important the passage of this Poison Labeling Act is. Many people will be interested how for 4 years, the gentleman from Missouri, Congressman CURTIS, gathered the facts and obtained support from professional groups, fellow legislators and other citizens to get this act into such fine shape that it was passed overwhelmingly at this session of Congress and signed by President Eisenhower. This all started with a frantic telephone call to TOM CURTIS from a St. Louis mother whose child had swallowed a bottle of nail polish remover which contained poison in it. TOM CURTIS pays the closest attention to phone calls and letters coming to him, and this act is the result of this. I am also bringing to your attention a letter from the mother of the child involved, from the July 18, 1960, issue of the St. Louis Post-Dispatch, as well as a news report from that newspaper of July 22 telling how the pen used by President Eisenhower was given to the youngster involved. A July 24 report from the St. Louis Globe Democrat is also of value. Mothers and fathers of youngsters throughout our country join me in expressing appreciation for the passage of this act and the great contribution my friend and colleague TOM CURTIS made in bringing this to the attention of the Congress and getting action on this serious problem.

[From the Oakland (Calif.) Tribune, July 27, 1960]

MOTHER HELPED PUT ANTIPOISON LABEL LAW ON BOOKS

(By Patrick McCormack)

NEW YORK, July 27.—We parents owe a vote of thanks to a Missouri mother who called her Congressman as well as her doctor when her toddling son guzzled fingernail polish remover.

When she found her son, Martin, drinking the polish remover, Mrs. Floris Mills, of Webster Groves, immediately called her doctor to find the antidote for the poison.

The doctor asked Mrs. Mills what the polish remover contained. But the bottle's label did not list the chemical contents. The doctor needed to know the contents to prescribe a specific antidote.

By good fortune, the general antidote the doctor prescribed saved the child's life. It doesn't always work for all poisons.

Mrs. Mills was upset. She asked herself why the label didn't contain a listing of chemical ingredients in the fluid. She thought that Federal laws covered such situations, that potential killers in the home had to be labeled.

At once, she called her Congressman, THOMAS B. CURTIS, Republican, Missouri, asking him to do something to protect children who innocently drink household poisons.

CURTIS thought Federal laws covered such situations, too. But when he checked with the Food and Drug Administration he was told that many household products which have dangerous ingredients were not bound by existing Federal labeling laws.

Further investigation revealed great interest in the problem of death and inury resulting from the accidental ingestion of hundreds of new, useful, but dangerous household products on the market.

The Food and Drug Administration was anxious to bring these products to the same standards of safety as many already covered by Federal law.

Doctors were particularly aware of the problem. In many locations, local medical groups established poison control centers in which records were kept on the harmful ingredients in thousands of products and to which individual doctors might refer inquiries concerning them.

These were a help, but frequently not help enough in an emergency, CURTIS learned.

The Congressman also contacted representatives of the industries making many of the products with potentially lethal ingredients. They shared the desire to prevent needless deaths.

The Congressman drafted a bill calling for the enactment of legislation to close the gaps in the labeling laws.

"Sometimes you find that legislation, like good wine, must be aged," CURTIS said. His bill, introduced in 1957, wasn't acted upon the first time around.

The father of five, he shared the anxiety Mrs. Mills felt over existing gaps in the law. He continued to work for passage of the bill.

The campaign started by Mrs. Mills received a big boost when Dr. Robert Grayson, president of the American Association of Poison Control Centers, endorsed the proposed legislation.

The endorsement came in 1960—three years after Mrs. Mills started her Congressman on the campaign to save lives.

Grayson, in a letter to CURTIS, reported that the Poison Control Centers Association, through its executive committee, favors passage of a uniform hazardous substances act.

"The need for such legislation is self-evident to those of us who are closely connected with this particular problem and we as a group would like to do all we can to promote its passage in the current session of Congress," Dr. Grayson said.

The American Medical Association's committee on toxicology also threw its support behind the measure. Dr. Bernard E. Conley, secretary of the committee, told CURTIS:

"We believe that legislation of this type is not only a valuable and effective means of reducing cases of accidental poisoning, but that by requiring identification of toxic ingredients it will aid the physician in making a prompt diagnosis and initiating treatment.

The bill—H.R. 7352—was signed into law this month by President Eisenhower. It gives the Federal Government authority to regulate the labeling of all hazardouus substances for nonmanufacturing purposes.

It covers the labeling of any hazardous substances in fingernail polish remover and other helpful liquids, creams, powders and lotions in the Nation's homes.

On the record, it's CURTIS' bill.

The Congressman likes to call the new law "Mrs. Mills' bill."

[From the Terre Haute (Ind.) Tribune, July 24, 1960]

LABELING LAW OMISSION FIXED BY CONGRESS

(By Patricia McCormack)

NEW YORK, July 23.—We parents owe a vote of thanks to a Missouri mother who called her Congresman as well as her doctor when her toddling son guzzled fingernail polish remover.

When she found her son, Martin, drinking the polish remover, Mrs. Floris Mills, of Webster Groves, immediately called her doctor to find the antidote for the poison.

The doctor asked Mrs. Mills what the polish remover contained. But the bottle's label did not list the chemical contents. The doctor needed to know the contents to prescribe a specific antidote.

By good fortune, the general antidote the doctor prescribed saved the child's life. It doesn't always work for all poisons.

Mrs. Mills was upset. She asked herself why the label didn't contain a listing of chemical ingredients in the fluid. She thought that Federal laws covered such situations, that potential killers in the home had to be labeled.

At once, she called her Congressman, THOMAS B. CURTIS, Republican, of Missouri, asking him to do something to protect children who innocently drink household poisons.

CURTIS thought Federal laws covered such situations, too. But when he checked with the Food and Drug Administration he was told that many household products which have dangerous ingredients were not bound by existing Federal labeling laws.

Further investigation revealed great interest in the problem of death and injury resulting from the accidental ingestion of hundreds of new, useful, but dangerous household products on the market.

The Food and Drug Administration was anxious to bring these products to the same standards of safety as many already covered by Federal law.

Doctors were particularly aware of the problem. In many locations, local medical groups established poison control centers in which records were kept on the harmful ingredients in thousands of products and to which individual doctors might refer inquiries concerning them.

These were a help, but frequently not help enough in an emergency, CURTIS learned.

The Congressman also contacted representatives of the industries making many of the products with potentially lethal ingredients. They shared the desire to prevent needless deaths.

The Congressman drafted a bill calling for the enactment of legislation to close the gaps in the labeling laws. But the bill, in-

troduced in 1957, wasn't acted upon the first time around.

The father of five, he shared the anxiety Mrs. Mills felt over existing gaps in the law. He continued to work for passage of the bill which finally was signed into law 11 days ago by President Eisenhower. It gives the Federal Government authority to regulate the labeling of all hazardous substances for nonmanufacturing purposes.

It covers the labeling of any hazardous substances in fingernail polish remover and other helpful liquids, creams, powders, and lotions in the Nation's homes.

On the record, it's CURTIS' bill.

The Congressman likes to call the new law "Mrs. Mills' bill."

[From St. Louis Post-Dispatch, July 22, 1960]

GIVEN PEN USED BY EISENHOWER IN SIGNING BILL

Mrs. C. H. Mills, 437 Woodlawn Avenue, Webster Groves, was given the pen yesterday which was used by President Eisenhower to sign into law the new Hazardous Substances Labeling Act. The presentation was made by Representative THOMAS B. CURTIS, Republican, of Webster Groves.

In 1956 Mrs. Mills called Representative CURTIS and urged him to introduce legislation to require the labeling of household products containing substances which are poisonous if taken internally.

Her son had swallowed the contents of a bottle of cuticle remover and information was not available for the proper antidote because there were no contents listed on the label. The new law provides that a clear warning must be printed on the labels of containers of hazardous substances. The statute also provides that first-aid instructions concerning dangerous ingredients be placed on labels.

Signing the bill by President Eisenhower culminated a long campaign by the American Medical Association for a law requiring labeling of all chemical products containing hazardous ingredients used in the home. Representative CURTIS was one of the leaders in the campaign for the new law after its need was brought to his attention by Mrs. Mills.

[From St. Louis Post-Dispatch, July 18, 1960]

EFFECTIVE IN CONGRESS

As the mother who called Congressman CURTIS in 1956 after my son drank cuticle remover and I was not able to find out what to do about it, I want to thank him and all others for the work and devotion which they have put into the passing of the Federal hazardous substance bill.

However, I feel I must do more than simply give him my thanks. Mr. CURTIS should be recognized for the type of consideration he gave me. He listened to me, and then went to work on the problem immediately, in spite of having to run in the 1956 election.

I received all the available literature on labeling of household chemicals and was kept in touch with the progress of the bill through 4 years and another election.

As much as I enjoy the satisfaction of knowing I said the right thing to the right person at the right time, it is even more important that in Mr. CURTIS we have a Congressman who does take the time and patience to listen, even to a mere housewife.

Mrs. C. H. MILLS.

Representative Ken Hechler Answers an Attack on His Record in Congress

---

EXTENSION OF REMARKS

OF

HON. KEN HECHLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 30, 1960

Mr. HECHLER. Mr. Speaker, in the Appendix to the CONGRESSIONAL RECORD, page A6352, August 24, was printed a letter I received from Clyde B. Pinson, one of my constituents. The following is the text of my response to Mr. Pinson, which was in his hands 24 hours prior to publication; he gave his letter to the press and it was published long before I received the letter in the mail:

AUGUST 25, 1960.

Mr. CLYDE B. PINSON,
Huntington, W. Va.

DEAR MR. PINSON: I was glad to receive your good letter of August 22. I love nothing better than a good, clean campaign on the issues, which will help the voters to make an intelligent choice on November 8.

Your letter furnishes a wonderful springboard for me to discuss some of the basic issues, and I welcome the opportunity.

Reelection really doesn't obsess me, as you say. You know, there are lots of very exciting things I enjoy doing. I love to write, I love to teach, I love to work with young people, and I love any occupation which enables me to help my fellow human beings and bring out their best qualities. I love serving in Congress because it give me an opportunity to help people, to help our State, our Nation, and the whole free world. It is a challenging job, and I love challenges—which is why I accept yours with such relish.

Your letter expresses a concern about my inacitivity and failure to "do something." I am glad, however, that my activities are sufficiently important to attract your attention and impel you to write me. As I stated, when your letter appeared in the press, long before I had a chance to receive it, I doubt whether you want a serious answer, or you would not have given it to the press beforehand in the way you did. Nevertheless, I am going to furnish a serious answer in the hope that it will illuminate the issues involved in this campaign.

The Democratic Party has a majority in the House and Senate, which enabled the Congress to pass an area redevelopment bill which would have helped many of our communities with chronic unemployment. West Virginia's one Republican representative, the Honorable ARCH A. MOORE, JR., voted for that bill, yet your Republican President vetoed it and thus helped choke off a program to do something for West Virginia. I voted for that bill, and stood up on the floor of the House of Representatives and invited President Eisenhower to visit West Virginia and see how the area redevelopment bill would have helped our State. The President didn't accept that invitation, although he has had plenty of time to visit India, Turkey, and many other foreign lands. In 1958, President Eisenhower, Vice President NIXON and many members of the Republican Cabinet came to West Virginia to make campaign speeches because our State had two Senators up for election, but despite our pleas they haven't been back to help us or even to inspect West Virginia. I'll be willing to bet you that they'll be back just before the election in 1960 to make some more campaign speeches, but when the chips were down and the President had a good bill in front of him to sign, he vetoed it.

I also fought and voted for a bill which Congress passed to control water pollution of our streams in West Virginia and all over the Nation. Cleaning up our streams and preserving our God-given natural resources was such a worthwhile program—particularly for our Ohio Valley area—that I was astonished when the President opposed this bill and torpedoed it with another veto. This measure would have "done something" for West Virginia, for all American communities and for lovers of the great outdoors everywhere. The spirit of a great Republican President, Theodore Roosevelt, must have wept at this shoddy spectacle.

I must also point out that I voted for bills to create a Coal Research and Development Commission and to preserve the markets for our small tobacco farmers. Yet the President vetoed both these bills in 1959 and stalled action on them for 1 full year, until Congress returned them in revised form to him in 1960.

Your letter said that I had done nothing to "feed our hungry children." President Eisenhower denied in his press conference on April 27, 1960, that there were any hungry children. In response to a question by Mrs. May Craig of the Portland Press-Herald, he answered: "Well, Mrs. Craig, you say they haven't been helped. I thought they had." Nonetheless, I believe that there are needy children in West Virginia, and these are the things I have done to help them:

I introduced a bill to require the Secretary of Agriculture to provide a balanced diet for needy persons from funds already at hand. The Department of Agriculture under Ezra Taft Benson fought this bill and deterred its passage.

I wrote, phoned and pleaded with the Department of Agriculture to add a few more staple items to the diet being provided needy persons. I was rebuffed at every turn.

I supported a food stamp plan to reduce our huge crop surpluses by helping to feed the needy. Secretary Benson has refused to use this law a Democratic Congress put on the books to do something for the needy.

I obtained a special order of $10,000 worth of vitamins for needy children in West Virginia from the Department of Health, Education, and Welfare after the State health department advised that the poor diet these children were forced to eat had lowered their resistance to flu and other diseases last winter.

Now may I move to your charge that I consistently opposed defense expenditures, while urging better preparedness in the space and missile fields. My position on this is well known, and I am sure you are aware of it. I made it clear at the beginning of this session of Congress that because I believe education is our real first line of defense, I would not vote for any defense expenditures which placed emphasis on muscles and material, without regard for the brainpower and trained hands that could put these things to the best use in our struggle to stay strong and to resist Communist pressures until some form of aid to education had been passed. Although this principle was thoroughly publicized and my position was made crystal clear, I heard no objection from you.

Now as for the request that I "do something" during these last days of the post-convention session of Congress. I am sure

that you know—if you keep abreast of national affairs through news media—that this session was called for the sole purpose of handling some "must" legislation, including several appropriations bills. These are major bills affecting the entire Nation. A new bill coming up would require committee hearings and debates for which there simply is not sufficient time prior to the adjournment of this session. I am proud of my record of "doing something" for our district and State. Among the proudest of these accomplishments, I list:

Helped put through two appropriations totaling $19,750 for a survey to determine the feasibility of a dam and reservoir on Twelve Pole Creek in Wayne County. This project had been inactive for 28 years since its inception due to lack of funds.

Called conferences and repeatedly put pressure on Navy and General Services Administration officials to free the idle Sylvania Plant for sale to an industrial employer. This plant is now available for sale to private industry.

Helped to get money to complete planning for the vast Belleville lock and dam project on the Ohio River in Wood County.

Assisted area industries with efforts to get defense contracts and spoke out in the House on 18 occasions in favor of more defense contracts and facilities for West Virginia.

Made countless appearances before the Civil Aeronautics Board and its officials in support of better airline service for the State and in appearance before congressional committees urged more funds for the Tri-State Airport.

Worked to convince the Eisenhower administration of the need for mandatory controls on importation of residual fuel oil, which had cut into West Virginia coal markets. These controls were imposed in March, 1959, and tightened in 1960.

Urged the U.S. Tariff Commission on several occasions to restrict imports of glass, ceramics, steel and fabrics which were cutting production of West Virginia plants and throwing workers out of their jobs.

Introduced and worked to have enacted a bill to transfer a Federal lock and dam on the Big Sandy River to Fort Gay, West Virginia, to improve its water supply and open the way to industrial development.

Repeatedly wrote, called and conferred in person with industrialists interested in locating facilities in West Virginia.

But if I did nothing else in Congress, I am proudest of all of the opportunity and inspiration I have tried to afford young people in West Virginia by enabling them to come to the Capitol to work for periods of a week or longer in my office and learn about our democratic processes. More than 60 high school and college students—45 of them winners in the nonpartisan "Week in Washington" contest which I conduct for high school juniors—have come from West Virginia to work in my office, and the door is always open to these energetic, idealistic young volunteers.

I am enclosing a summary of 101 points which represent my aims and achievements. I also am enclosing a detailed summary of legislation which I have introduced, and a history of what has become of these bills, indicating the number which have become law.

I would be glad to send these two documents to any person you suggest, or to anyone who writes in to ask for them.

In your letter, you state: "I shall be happy to consult with you on the problems we face." That statement particularly interested me, because I am always glad to consult with constituents like yourself who have constructive ideas.

However, in all the time I have represented you in the Congress, you have never communicated with me about issues or problems.

A thorough check of my files reveals that you have never once written me a letter, telephoned me, visited my office in either Huntington or Washington, nor made one single suggestion to consult with me on the problems we face. Our only communication is a response to a telegram I sent you on the occasion of your primary victory.

Since you have been in Washington recently having your picture taken with President Eisenhower, Mr. NIXON and others, I can only assume that you considered none of the problems you mention of sufficient importance to call my office about them, nor to contact me in Huntington, although our offices there are not too far apart.

If you have problems, however, I want to assure you that I shall be happy to consult with you and to attempt to give you the same intensive degree of personal service which I am proud of giving every voter in my district who comes to me for assistance, regardless of political affiliation.

Do you have problems? Why not come by my office, and you may be sure my all-West Virginia staff will give you a cordial welcome and we can discuss action in the best interests of our State.

I will be happy to confer with you at any time or place, provided it does not interfere with a rollcall vote in the House of Representatives, for I am very proud of my voting attendance record (95 percent in 1959, 100 percent in 1960) which is the best mark of any West Virginia Congressman and far above the average of all Members of Congress.

As I told 23,000 Huntington citizens in a letter asking them to make my campaign one financed by contributions from the people, "I will conduct a clean and constructive campaign on my record, never either privately or publicy attacking my opponent, but setting forth the details of my performance and platform." I intend to abide by that pledge.

You seem to be disturbed by the fact that frequent stories appear in the newspapers concerning my activities. I believe very deeply that every person in public life must be an educator, bringing facts to the attention of the people so they can make firm judgments. I also believe that a very important part of a Congressman's job is to keep the people informed on what he is doing. That is why I have worked hard to inform the people about the background of issues confronting the Congress, what goes on behind the scenes of Congress, and what your Congressman is doing or planning to do. In public life, one cannot retire behind a cloak of false modesty, but one must continue to give the people the whole truth about matters which affect their interests. So far as "gimmicks" are concerned, I guess everybody has to get a good, hearty laugh every now and then, and I get just as much of a kick out of this as the next fellow.

I have had your letter printed in the CONGRESSIONAL RECORD, with an invitation to my colleagues in Congress and constituents to comment on what they feel I have accomplished in my first term. After all, a fellow can't judge this with total objectivity himself, and I'd prefer to have others indicate what they think from their own viewpoint. From time to time, I'll send you copies of these letters.

We are living in very troubled times in the world. From Cuba to the Congo, the world is in ferment. If there is one thing we need in our own country it is a new moral leadership. We also need a rededication to basic ideals and principles, a redefinition of our national purpose, and a determination on the part of the people that we will lift our sights above the petty, backbiting, and selfish jealousies which sap our Nation's moral strength. We must be builders, and not wreckers. We must purify our hearts if we would strengthen our muscles.

Your servant in Congress,

KEN HECHLER.

Certified Bourbon

EXTENSION OF REMARKS

OF

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 22, 1960

Mr. BRAY. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD the following address of the Honorable Harold W. Handley, Governor of Indiana, at Lawrenceburg, Ind., on August 8, 1960, at the Introduction Day Celebration for Certified Bourbon:

ADDRESS BY GOV. HAROLD W. HANDLEY, OF INDIANA, AT INTRODUCTORY DAY CEREMONIES FOR CERTIFIED BOURBON AT LAWRENCEBURG, IND., ON AUGUST 8, 1960

Toastmaster Bill, Mr. Rosenstiel, members of the executive family of Schenley's Distilleries, to all of our good friends—the employees who are here in the room who after all make it possible for the executives to cash their checks—and good Hoosier friends all, I want to welcome Mr. Rosenstiel and the executive group back to Indiana, because I remember some 5 years ago when I was down here, things were pretty rough. They weren't sure that they were going to be able to keep the plant open. We had a lot of wonderful people in this area that were concerned about their jobs. And because of the foresight, vision, the merchandising ability of Schenley's, we once again see this great plant in real productive operation.

And it certainly means a great deal to the economy of the State of Indiana, not only to this particular area but to the State as a whole. And it is with a great deal of pride that I come down here today to place the seal of approval, the certification, on this new Indiana bourbon.

I think it's with a little extra pride because some of us happen to know that the Federal Government frowned upon this particular performance. And you know, Mr. Rosenstiel, you're in the heart of the States rights country, and if the Federal Government said "No" but we felt that you had a product of merit, we'd say "Yes." And we're glad to do it today. [Applause.]

We're all pretty much concerned about the buildup of bureaucracy on the Potomac. It's getting to the point where the Federal Government makes an awful lot of the decisions for us. It's just like the judge who told this boy, "I'm going to give you a very fair trial but I have to set the execution for tomorrow."

I think there's a great deal of difference between positive action and negative action, and Schenley Distillers has shown some real positive action. I was talking to Mr. Lockwood about his experiences in the district attorney's office in New York, and was reminded of his political opposition in those days, Tammany Hall. There was this Tammany Hall leader who was called by one of his friends who said, "You know, my brother has just been arrested. I'm afraid they're going to send him to the penitentiary. What can you do to help me out?"

The leader said, "I'll take a look at it." He investigated and found out that the fellow was guilty as charged, so he took no action whatsoever.

About a week later this irate call came and the man said, "You're a fine friend of mine. Did you see the the morning papers? My brother's picture is in the Rogues' Gallery. That picture of him in the paper—and he's going to the penitentiary."

But this Tammany leader said, "Well, now, what are you getting so concerned about?

Did you see the low number I got for him?" [Laughter.]

So you see, there is a big difference between positive and negative action. And so on behalf of this Hoosier State, to all of the members of the Schenley family, we certainly want to thank you, to tell you how grateful we are that you have once again resumed increased production, and we hope that with this certification you will expand your facilities even more.

After all, the attitude of our administration here is one that I am very proud of, that we all are proud of, all Hoosiers. Because it is an attitude that clearly illustrates the slogan of our department of commerce that "Indiana wants industry, and wants industry to feel wanted."

There's an old saying that a man is known by the company he keeps, and the State of Indiana wants to be known by the company it keeps. I don't think any State has a better industrial climate, and perhaps that's why more than two industrial major plants are built in Indiana each week the year round. There must be a reason.

This is a day that will long be remembered by both the Indiana distilling industry and by consumers of the world's finest quality whisky: Indiana certified bourbon.

It is a historic occasion, because it opens a new horizon to the distilling industry of our State and marks a sweeping departure from traditional methods in the merchandising of Indiana-made bourbon.

Now, as you all know, the new merchandising method was made possible by the promulgation last year of a regulation by the Indiana Alcoholic Beverage Commission. This regulation, known as rule 40, was designed to place the prestige of the State behind the prestige of the product, and open new markets for Indiana certified bourbon, both at home and abroad. It's a regulation that gives Indiana distillers the privilege of marketing their straight bourbon whisky as a product certified by the State of Indiana.

This action by the alcoholic beverage commission in the State of Indiana is Indiana's answer to foreign competition. By tradition, consumers regard a bottled-in-bond stamp as a hallmark of quality, whether it is affixed to a bottle of bourbon, a bottle of Canadian whisky, or a bottle of Scotch. Unfortunately, our Federal bottled-in-bond stamp has a diminishing value today because it can be applied only to whiskies that are heavy bodied.

Distillers have therefore been at a great disadvantage in competing with imported whiskies because both the Canadian bottled-in-bond stamp and the British bottled-bonding stamp may be affixed to whiskies that are lightbodied. And this is what the public taste seems to be veering toward, as demonstrated by constant increases in sales of imported whiskies in this country.

So Indiana sees a certification stamp as a great opportunity for distillers—not only Schenley, but any distiller—because it gives recognition to this changing public taste pattern. The new Indiana stamp is a hallmark of quality, a hallmark that will enable Indiana bourbon to compete with Canadian and Scotch whiskies whose popular appeal lies in their light body and mild, smooth taste.

I heard a story about Babe Herman, the legendary outfielder who was with the Dodgers when they were from Brooklyn. In a restaurant he asked for a sardine sandwich and the waitress said, "Domestic or imported?" He said, "What's the difference?" She said "Fifty cents." He said, "Well, why the hell should I pay 50 cents for passage of a bunch of lousy sardines from across the sea?"

Well, here we have a bourbon, certified with Indiana's stamp, that's as good as or better than you can get from across the sea * * * and Mr. Rosenstiel told me it's cheaper and going to be still cheaper * * * and besides, the tax money on it goes to our own Federal Government.

We see this product proving a boon to one of the State's principal agricultural products, corn, good Hoosier Indiana corn. I'm told that Schenley Distillers uses over 4½ million bushels of corn each year in the manufacture of its many fine products. And as the national reputation for Indiana bourbon grows, so will the demand for our State's fine corn. And of course, if the distillers of Indiana are able to expand their shipments, this will mean more employment for Indiana labor.

I don't know whether you gentlemen from outside the State know this, but at the International Livestock Show in Chicago, Indiana has had more than 70 percent of the corn kings of America. Indiana corn is the best corn in the Nation. And it takes good corn to make good Bourbon, so the combination has brought Schenley's to us in expanded capacity. And because of that fact we, in turn, have brought certification to Schenley.

The history of Dearborn County contains something of historic value and of great interest, namely that the first commercial distillery in Indiana territory was built here in Lawrenceburg—right on this spot where the Schenley distillery stands today—back in 1809. That was 7 years before Indiana was admitted to statehood.

We know that commercial distilleries did not come into existence in those times until long after the advent of home distilleries. The farmer-distiller always blazed the trail for the commercial distiller. So, since Indiana was a great corn-producing area even in those early times, it is reasonable to believe that farmer-distillers were making Bourbon here at the time of the Revolutionary War.

Back in those days there were no drugstores, no wonder drugs, and Bourbon was more than a beverage for settlers living on the frontiers. It was the only "patent medicine" that was available. Settlers used it as an antiseptic, as a painkilling anesthetic, and as an all-purpose medicine. Bourbon was practically indispensable to life on the frontier.

Also, bourbon was used as a medium of exchange. Merchants accepted bourbon as a barter for manufactured goods, farm supplies and foodstuffs. In Indiana Territory a gallon of bourbon sold for the same price as a bushel of wheat, about 25 cents. And if a farmer didn't have the cash to buy it, he could take his corn to a local distillery and have it converted into bourbon on a percentage basis. Hoosiers, you know, have always been a very resourceful people.

And because Lawrenceburg is located on the Ohio River, the early Indiana distillers had access to all markets along the inland waterways from Cincinnati to New Orleans. They did a thriving business in Louisiana Territory, shipping bourbon by the barrel on flatboats down the Ohio and the Mississippi to New Orleans. Indeed, Indiana bouron was the favorite of French-speaking settlers in the Mississippi bayous long before Napoleon sold Louisiana to the United States.

There were seven distilleries operating in the Lawrenceburg area and many others scattered throughout the Territory in the early years of the 19th century. Now we don't know too much about the details, but we do know that enormous quantities of bourbon were produced each year. Later history records that the Gaff plant in Aurora took orders for 2,820 barrels of bourbon during a 7-day period in 1875. And its fine quality is attested by the fact that it sold at an average of $50 a barrel. The same historian quotes "a gentleman who for years was connected with the Internal Revenue office" as saying that Lawrenceburg distillers "made enough whiskey to float a navy or flood a city." Now it's a fact that between the Civil War, when the Federal excise tax was enacted, and 1880, a period of only 15 years, Lawrenceburg distillers paid $30 million in Federal excise taxes.

But Lawrenceburg was not the only bourbon production center in the State. Throughout the 19th century there was hardly a town in Indiana that didn't have its own distillery. In fact, Terre Haute during the last half of the century became one of the greatest production centers in the Nation. And as the century came to a close the distilling industry, with an output valued in excess of $22 million, was Indiana's fourth largest industry.

Just prior to World War I, the industry in Terre Haute alone was producing about 15 million gallons a year and contributing in Federal excise taxes about one-seventh of all funds required to operate the U.S. Government. That's a far cry from today.

World War I was the turning point in the history of distilling in Indiana, for it brought grain rationing and production controls—and, ultimately, national prohibition.

A great Indiana industry was destroyed overnight, and the fame of its chief product—straight bourbon whisky—faded quickly.

After repeal of the 18th amendment, the Indiana distilling industry was not wholly resurrected. Only in Lawrenceburg was the revival anywhere near complete.

A new generation of consumers had come of age, a generation that was more familiar with Scotch and Canadian whiskies than with our incomparable bourbon, because, after all, bourbon hadn't been available for some 13 years.

For the past 26 years, from the time of repeal on to this day, Indiana distillers have consistently been outadvertised, outpublicized, and outmerchandised by producers of straight bourbon in other States. Consequently, Indiana bourbon has never been able to regain its eminent position of pre-prohibition times.

That's why we here in Indiana had to take the bull by the horns and create an effective means for merchandising Indiana straight bourbon. We can do it, because, after all, Indiana has more limestone and more limestone water than any other State in the Union; Indiana is a major corn-producing State, and corn and limestone water are the principal ingredients of good bourbon whisky. No State produces better bourbon than Indiana and no State has so much to offer to bourbon distillers, for in addition to an abundance of corn and limestone water, Indiana has everything else needed for a large-scale bourbon production.

We have access to the sea through the Great Lakes and the St. Lawrence Seaway. We have access to the Gulf of Mexico through the Ohio and the Mississippi Rivers. We have splendid statewide networks of highways and railroads. We are serviced by nine airlines. We have an adequate supply of skilled labor and we have low tax rates, and the State is on a pay-as-you-go basis, with a constitutional prohibition against the incurring of funded debt.

Indiana, gentlemen, is a good place to do business, a good place to live, and a mighty good place to work. It's a State in which every good distilling company should have a bourbon-producing plant.

At this time I want to commend Schenley Industries for its willingness to cooperate with the State of Indiana in its declared policy of making Indiana certified bourbon the toast of the world, which means a toast to Indiana as well.

Thank you very much, Mr. Rosenstiel.

What's Behind the Pledge?

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 30, 1960

Mr. MOORE. Mr. Speaker, I take great pleasure in extending in my remarks today the award-winning speech given by Miss Carolyn Funk of Wheeling, W. Va. Miss Funk was first place winner in the West Virginia State 4–H public speaking contest held as part of the annual State 4–H roundup, where she presented her speech, "What's Behind the Pledge," given at Jackson's Mill on August 25.

During her junior year at Bethany High School, 1959, Miss Funk placed second in the district division of the annual American Legion oratorical contest and won 4 years' tuition at one of the State's colleges.

Last summer, under the auspices of the United Christian Missionary Society and as a representative of Bethany Memorial Church, she traveled throughout Mexico visiting the Mexican missions. Upon her return from this trip, she gave a full report of the visit from the pulpit of the Bethany Memorial Church.

During her senior year in high school, she was vice president of the class; as a junior, she was class president. She graduated as an honor student and was girls' State representative and delegate to the honorary West Virginia State leadership meeting in June 1959.

Traveling and meeting different races of people is not new to Miss Funk for in addition to visiting Mexico, she has lived in Hawaii for 5 years where she made many friends with people of all nationalities.

Miss Funk's speech follows:

WHAT'S BEHIND THE PLEDGE?

How often have you said: I pledge—
My head to clearer thinking;
My heart to greater loyalty;
My hands to larger service;
My health to better living;
For my club, my community, and my country?

Yes; you have given this pledge many times. Do you remember, when you were a brandnew 4–H member, how carefully you memorized the 4–H pledge? Do you remember that every time you gave this pledge you tried very hard to have each word in its correct place? This was long ago, and now all of us know the pledge well indeed. In fact, some of us know it so well that we can stand on our heads and say it backward. I have seen this done at camp, and that was some stunt. So we say we have learned this pledge well. We have memorized the words, but do we understand the meaning? Just what's behind the pledge? I see the word "citizenship." Let's look at each of the four H's and find citizenship.

I pledge my head to clearer thinking. Everyone of us must be a clear thinker if we are going to be a valuable American citizen. We must be able to evaluate that which we hear and read and see. Evaluation—you know the old childhood adage, "If I told you to go jump in a lake, would you do it? No." But evaluation is not always easy. You cannot with indifference say, "This is yes and this is no, or this is black and this is white." Evaluating, making wise choices, takes practice.

How does 4–H help to develop the head H? The 4–H member has the chance to vote at his club meetings. He is evaluating choices. The 4–H member has the chance to broaden his outlook as he meets many new and different types of people at meetings—county, State, and nationwide. Through the charting program the 4–H member thinks seriously of world problems. I pledge my head to clearer thinking—I evaluate.

I pledge my heart to greater loyalty. The true American citizen knows the ideal his country upholds. In America, we believe in democracy and in equal rights. "We hold these truths to be self-evident, that all men are created equal." Thomas Jefferson said this for the benefit of the American people. It makes no difference if these citizens are red or white, brown or black or yellow. They are all entitled to equal rights. How often Jefferson's words are abused. If we are going to be loyal American citizens, we must stand for this ideal of equal rights, even when those around us fall short of the goal.

What does 4–H have to say about loyalty? I especially like 4–H because it stresses the ideal of loyalty to oneself. If I am going to be loyal to myself, I must do my project work honestly and to the best of my ability. If I am going to be loyal to myself, I must be willing to take an office in my club, to better myself for leadership. If I am going to be loyal to myself, I must be able to use encouragement and criticism constructively—to make the best better. I pledge my heart to greater loyalty—I stand for an ideal.

I pledge my hands to larger service. The useful American citizen not only dreams of high ideals, he actually does something about them. If we are going to keep all our many freedoms in America, there is need of many skillful hands. There is need of doctors, lawyers, ministers, teachers, farmers, factory workers, plumbers, politicians, nurses, businessmen, researchers, repairmen—just to name a few. But above all, there is need of the teacher who puts that spark of interest in her pupils; there is need of the researcher who wrestles with the problem until the solution is found; there is need of the politician who keeps his promises.

How does 4–H progress the development of the Hand H? The 4–H member increases the power of his hands as he does his project work and community project work. Through charting, the member ponders long his life vocation. He learns to help himself as he helps others. I pledge my hands to larger service—I am useful.

I pledge my health to better living. Without health a citizen just can't be very useful. One of our greatest Presidents knew the importance of good health. When he was a boy he was frail, but he went westward and strengthened his body until he became as strong as western cowboys. As he rode with the Rough Riders his sound mind and healthy body were indeed an asset to our country. Yes, Teddy Roosevelt knew the importance of good health.

Part of the 4–H principle is a sound mind and healthy body. Without these it is hard to think clearly or to have loyalty or to be of service. I pledge my health to better living—I take care of myself.

Just what's behind the pledge? I see the word "citizenship," spelled with four H's—"Head, Heart, Hands, and Health."

Further Reduction in Rates of Import Duties Harmful to Scissors and Shears Industry

EXTENSION OF REMARKS
OF
HON. A. D. BAUMHART, JR.
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 30, 1960

Mr. BAUMHART. Mr. Speaker, the importation of foreign-made goods has seriously affected production in our country. One of the imported items which has been most harmful to my Congressional District is the importation of scisors and shears. I have always opposed this free importation of foreign-made goods which in effect tends to export good jobs and import competitive items. I trust that future sessions of the Congress will give consideration to this problem before it is too late for the industry mentioned here, as well as the many other industries which are affected in the same manner. Recently I received a "summary" of the situation from Mr. C. L. F. Wieber, president of the Clauss Cutlery Co. of Fremont, Ohio. Under unanimous consent I incorporate the following in the CONGRESSIONAL RECORD:

SUMMARY OF INFORMATION PRESENTED TO THE U.S. TARIFF COMMISSION AND THE COMMITTEE FOR RECIPROCITY INFORMATION BY THE SHEARS, SCISSORS, AND MANICURE IMPLEMENT MANUFACTURERS ASSOCIATION

The Shears, Scissors, and Manicure Implement Manufacturers Association has filed a written brief and presented oral testimony to the Tariff Commission and the Committee for Reciprocity Information opposing any reduction, during the GATT negotiations at Geneva, Switzerland, in the present rates of import duties on scissors and shears provided for in paragraphs 357 and 1531 of the Tariff Act of 1930, is amended.

Further reduction in the rates of import duties on scissors and shears are opposed for the following reasons:

1. The domestic scissors and shears industry is truly a small business as there are only two domestic firms which employ 250 or more production workers, and none with more than 500 production workers.

2. There are only 20 firms manufacturing scissors and shears in the United States. This is less than one-half of the number manufacturing scissors and shears before the import duty reductions made during 1950 and 1951.

3. Approximately one-half of the firms still manufacturing scissors and shears have less than 10 employees each.

4. The rates of duties on scissors and shears valued at more than 50 cents per dozen provided for in paragraph 357 of the Tariff Act of 1930 were reduced 50 percent during 1950 and 1951.

5. The rate of import duty on scissors and shears in fitted cases provided for in paragraph 1531 has been reduced 60 percent since the Tariff Act of 1930 were enacted.

6. Scissors and shears are an ideal import item because:

(a) They are light in weight,

(b) They are cheap to ship from abroad,

(c) They are not fragile,

(d) They will not deteriorate,
(e) They will not go out of style, and
(f) The foreign cost of production is substantially less than the domestic cost of production.

7. During 1951 the quantity and value of imports of scissors and shears valued at more than 50 cents per dozen were greater than during the entire 10 prewar years of 1931–40.

8. Imports of scissors and shears valued at more than 50 cents per dozen during 1959 had a foreign value of $3,059,673 which is more than 49 times the average annual value during the 10 prewar years.

9. The quantity of scissors and shears valued at more than 50 cents per dozen imported during 1959 was 8,204,568 pairs which is more than 50 times the average annual quantity imported during the 10 prewar years.

10. Imports of scissors and shears valued at more than 50 cents per dozen increased 21 percent from 1958 to 1959.

11. Imports of scissors and shears valued at more than 50 cents per dozen during the first 5 months of 1960 were 22 percent higher than during the first 5 months of 1959.

12. Foreign manufacturers, since the end of World War II, have cut their prices on scissors and shears so that the average value of an imported pair during 1959 was less than half of the value of a pair imported during 1946.

13. The major sources of imported scissors and shears are West Germany, Italy, and Japan. Hourly wages paid to employees in the scissors and shears industry in these countries are from one-tenth to one-third the hourly wages paid in the United States for similar work. In the United States, the labor cost of producing a pair of quality scissors or shears is about 75 percent of the total cost.

14. Domestic manufacturers are unable to sell scissors and shears in foreign markets due to low prices of scissors and shears produced in West Germany, Italy, and Japan.

15. Imports of scissors and shears valued at more than $1.75 per dozen during 1959 were equal to 95 percent of domestic manufacturers shipments of similar scissors and shears.

16. The value of shipments of domestically manufactured scissors and shears declined from $19,526,000 in 1948 to $11,058,000 in 1958, a decrease of over 40 percent.

17. Some domestic manufacturers are presently operating at a loss.

18. Many employees in the domestic scissors and shears industry are trained only for this type of work and have been unable to find new work in other industries.

19. Scissors and shears are essential items for use during national emergencies. Certain types are included on the "List of Items Essential for Survival" issued during February 1958 by the Office of Defense Mobilization.

20. The domestic scissors and shears industry has the employees, equipment, and know-how to produce surgical scissors and bandage scissors in case of a national emergency.

For the reasons summarized above domestic manufacturers of scissors and shears have requested that scissors and shears classified under paragraphs 357 and 1531 of the Tariff Act of 1930, as amended, be removed from the list of products to be considered for possible U.S. concessions during the coming negotiations under the Trade Agreements Act of 1934, as amended and extended.

Each pair of scissors or shears imported means one less pair will be manufactured by U.S. workmen in U.S. plants, financed with private capital and paying taxes to the U.S. Government.

On the Other Foot

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 25, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by John Herling as it appeared in the Washington Daily News of August 23, 1960:

ON THE OTHER FOOT
(By John Herling)

Must we believe that unethical practices are built into the American business system? The scandal in the Chrysler Corp. compels us to find an answer.

When Robert F. Kennedy, former chief counsel of the McClellan rackets investigation, looked into improper practices of the labor or management field, he came up with serious findings against a group of business "respectables."

His list of the so-called respectables included some of the country's blue-chip companies whose top officers, according to the committee investigators, had been hip deep in collusion with certain characters who had muscled their way into the trade union movement. In return for current and future favors, so-called trade union representaitves had "supplied" labor to employers either at cut-wage rates or other profitable considerations.

Loud and justified indignation was heard. The scorn and the legislation were, however, directed mainly at the trade union movement. Senator JOHN F. KENNEDY worked for a law to apply equally to malpractice in labor and in management. But, by and large, under Landrum-Griffin, companies and their managements came through with scarcely a legislative glove laid on them. Here and there, some provision in the Landrum-Griffin law called for certain types of "reporting and disclosure." But, as one of the administrators of the Landrum-Griffin law told me sardonically: "This is a 50-50 law, all right. Both labor and management are mentioned in it, in equal percentages—like the famous stew made up of half horse and half rabbit."

You will recall that the McClellan investigation went on full tilt despite the establishment of codes of ethical practices by the American Federation of Labor and the Congress of Industrial Organizations; despite the expulsion from the AFL–CIO of the Teamsters and other unions whose leadership was declared corrupt; and with the approval of key AFL–CIO leaders.

During and after the McClellan hearings, as Bob Kennedy shows, questions were raised about the ethical practices of management itself. The National Association of Manufacturers and the U.S. Chamber of Commerce—and its large corporate memberships—were both queried about the need for ethical practice codes. These questions were ducked. But now, with the Chrysler supplier scandals made public, the time for evasion has passed.

What do we find is alleged to have happened in the Chrysler Corp.? Its miracle man president, William C. Newberg, was fired for "conflict of interest." He is charged with profiting from personal interest in two firms supplying parts to the Chrysler Corp. He is not the only one. Jack W. Miner, director of marketing for the Plymouth-De Soto-Valiant Division, was tied in with an advertising company which did profitable business with Chrysler. Stockholders' suits have been brought. The Chrysler management has hired a big law firm, headed by former Republican presidential nominee Thomas E. Dewey, to "check on the adequacy of its continuing investigation"—an investigation being conducted by the corporation itself.

Will Chrysler's appointment of Tom Dewey satisfy the public? Remember the scorn which was deservedly heaped upon James R. Hoffa when he appointed former Senator George H. Bender, Republican, of Ohio, to report to him on malpractice inside the Teamsters Union?

Let us be candid. Only congressional committees have power to study the nature and extent of this and related conditions in the national business community. The Attorney General also has power to investigate. What's good for organized labor is good for organized business. Let's have a 50-50 deal.

The Ukrainian Congress Committee

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 30, 1960

Mr. KEOGH. Mr. Speaker, 20 years ago this autumn an organization was formed to represent the views of more than 2 million fine Americans of Ukrainian ancestry. It is a privilege for me today as it reaches that milestone in its history to salute that organization, the Ukrainian Congress Committee of America, and its noted chairman, Prof. Lev E. Dobriansky, of Georgetown University and its Institute of Ethnic Studies, who has been the leader of the congress committee during more than half its lifetime.

The Ukrainian Congress Committee, under the direction of such leaders as Dr. Dobriansky, is dedicated to the security interest of the United States which it serves principally through information concerning the struggle for freedom of the captive nations behind the Iron Curtain and through concrete proposals in the propaganda aspects of the cold war. Through information provided by the congress committee we have been able to pierce the myth of Soviet unity which Communist Russian has foisted upon the free world. Dr. Dobriansky has pointed out that the non-Russian nations within the Soviet borders are peoples with enduring histories and that the Ukraine with its 42 million people is the largest of the non-Russian nations within the Soviet Union—which cannot by any stretch of the imagination be called a nation itself.

Mr. Speaker, it is my hope that the Ukrainian Congress Committee will continue to flourish so that it can proceed with its mission of informing all the American people about the conditions within the Soviet Union. I heartily congratulate it on its 20th aniversary and I commend it for the great work it has done during those years.

Know Your Congressman—Legislative Record, Duties, and Responsibilities of Congressman Gordon L. McDonough

EXTENSION OF REMARKS
OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 30, 1960

Mr. McDONOUGH. Mr. Speaker, it is the desire of all Members of Congress to become intimately and personally acquainted with all of the people they represent and likewise for the people they represent to know their Congressman.

This is not always possible as much as the Congressman and the people he represents try to become personally acquainted.

However, through correspondence, the press, radio, TV, and other means of communication, all Congressmen try to inform their people what they are doing; the bills they sponsor, introduce, and promote; the committees they are assigned to; the major issues they have voted for; and their duties and responsibilities.

In order to properly inform the people of the 15th District, I am submitting the following summary of my legislative record, my duties and responsibilities, and some of the important legislation I have promoted:

MAJOR ISSUES CONGRESSMAN M'DONOUGH HAS SUPPORTED AND VOTED FOR

The McDonough record speaks for itself. But the record of achievement in legislation initiated by him is but a small part of the total record of accomplishment built by the consistent and vigorous efforts of the Congressman from the 15th District in behalf of his constituency.

He has supported legislation to establish a strong adequate national and civilian defense to meet any enemy attack.

He has urged legislation to outlaw the Communist Party in the United States and to combat communism both within the United States and abroad.

He stands firmly opposed to the admission of Red China to the United Nations.

He has consistently supported new and improved veterans' hospitals and necessary increases in pensions for service and nonservice-connected veterans and war widows and dependents.

He has supported lower downpayments on new homes and liberal loans for alternations and repairs of existing homes, and for slum clearance under housing legislation.

He has supported increased social security payments that would provide adequate pensions to our senior citizens, and legislation to provide health and medical aid for our needy senior citizens.

He believes in a sound fiscal policy which will hold inflation in check and at the same time promote stable economic growth in the United States and maintain a maximum level of employment.

He has supported civil rights legislation to eliminate discrimination because of race, creed, or color in education, voting rights, and employment.

McDONOUGH believes in economy in Government through elimination of waste, extravagance, and duplication of services. He also believes in providing maximum service to our citizens for every dollar spent by Government.

He believes in tax reduction, if such reduction can be achieved while we at the same time maintain our national defense at the high level necessary and meet the technological challenge of the Soviet Union in the field of scientific achievement.

LEGISLATIVE RECORD OF CONGRESSMAN GORDON L. M'DONOUGH

The record of achievement attained during his term of service to the people of the 15th Congressional District is outstanding. It is a record of action rather than words—of accomplishment rather than promises. It is the result of his consistent efforts to act and work in the best interest of all the people in his district as well as for the Nation.

During the eight complete Congresses in which McDONOUGH has served, he has introduced the following major bills which have resulted in ultimate action and public law.

Now let's have a look at the McDonough record.

California ownership of tidelands: A bill to establish the title of the States to tidelands areas was introduced by McDONOUGH in the 79th Congress. His fight to establish California's ownership of tideland property which is so important to the citizens of our State culminated in enactment of Public Law 31, 83d Congress, which recognizes California's ownership of tideland property.

Los Angeles post office expansion: A bill for the expansion and remodeling of the terminal annex post office was introduced by McDONOUGH in the 80th Congress. The improvement and extension of facilities at terminal annex which included an additional floor on the building was necessary as this post office handles the bulk of ingoing and outgoing mail for the Los Angeles area, and the tremendous population increase in the Los Angeles area since World War II resulted in a corresponding increase in the mail load handled at terminal annex. The expansion and remodeling of terminal annex has been completed as a result of Public Law 233, 81st Congress, and efficient mail service in the Los Angeles area has been maintained.

Federal buildings for Los Angeles: Congressman McDONOUGH introduced a bill in the 80th Congress for the construction of a new customhouse and Federal office building to meet the increased need in the Los Angeles metropolitan area, and to afford greater service and convenience to the public. Congressional action providing approval of this building was completed July 1956, and construction on the new Los Angeles customhouse and Federal office building will soon be underway.

Los Angeles harbor improvements: Los Angeles Harbor is one of the largest harbors in the United States, and with constantly increasing commerce, facilities for the loading and unloading of vessels must be expanded with harbor channels extended and enlarged to provide more space for vessels and to assure adequate channels for larger vessels to make port at Los Angeles.

Congressman McDONOUGH introduced bills to improve the east basin of Los Angeles Harbor by dredging and enlarging, and to improve the west basin including the removal of a drawbridge, and these harbor improvements were authorized in Public Law 641, 84th Congress.

He also obtained reimbursement to the city of Los Angeles for funds which had been expended on the East Basin Harbor improvement for necessary immediate work prior to the congressional authorization.

Air pollution control—smog: Recognizing the serious threat of smog to the health and welfare of every citizen of Los Angeles, McDONOUGH introduced a bill in the 84th Congress to provide for research by the Federal Government into the causes of air pollution, its control and prevention.

The Federal program for research on air pollution now in progress under the direction of the Department of Health, Education, and Welfare was inaugurated with enactment of Public Law 159, 84th Congress.

Marina Del Rey project: The McDonough bill introduced in the 83d Congress provided for authorization of the Marina Del Rey small craft harbor, a project urgently needed to supply a base for the U.S. Coast Guard Air-Sea Rescue Unit, and which also will provide additional small-craft facilities and a useful recreation area. Authorization for this project was included in Public Law 780, 83d Congress. Congressman McDONOUGH's vigorous efforts also obtained the following appropriations for the Marina Del Rey project: $25,000, Public Law 163, 84th Congress; $355,000, Public Law 641, 84th Congress.

Repeal of taxes: Congressman McDONOUGH introduced legislation in the 80th Congress to repeal the excise tax on theater admissions. Partial repeal of the admission excise tax was enacted under Public Law 324 of the 83d Congress and Public Law 1010, 84th Congress.

Veterans: In the 79th Congress, McDONOUGH introduced a bill to extend National Service Life Insurance for 5 additional years thereby assuring life-insurance benefits for all men in service which otherwise would have terminated. The extension of National Service Life Insurance was established under Public Law 118, 79th Congress.

McDONOUGH introduced a bill in the 83d Congress to extend the 3-year presumption of service connection to veterans in all types of tuberculosis. This bill was designed to bring relief to many veterans with types of tuberculosis other than pulmonary, which were contracted as a result of service. The 3-year presumption of service connection was extended to veterans in all types of tuberculosis under Public Law 241, 83d Congress.

McDONOUGH introduced legislation in the 85th Congress to increase pensions for widows of Spanish-American War veterans. The increase in pension was effective under Public Law 425, 85th Congress.

Armed services: The McDonough bill introduced in the 82d Congress fixed the personnel strength of the United States Marine Corps to assure full efficiency of the corps, and also gave the Commandant of the Marine Corps a place on the Joint Chiefs of Staff. This was accomplished with the enactment of Public Law 416, 82d Congress.

Air Force Academy: A bill to establish an Air Force Academy to provide the highly specialized training necessary to provide competent and efficient officers for the United States Air Force necessary for the defense of our Nation was introduced by McDONOUGH in the 81st Congress. The U.S. Air Force Academy, now located in Colorado, was authorized with enactment of Public Law 325, 83d Congress.

Post Graduate Naval Academy in California: The McDonough bill to establish an additional Naval Academy in California and his fight to improve and extend facilities for the technical training of officers for the U.S. Navy resulted in establishment of the Post Graduate Naval School at Monterey, Calif., December 22, 1951.

U.S. flag: McDONOUGH introduced House Joint Resolution 167 in the 80th Congress to assure that the flag of the United States always shall receive proper respect and be placed in its proper position by providing that no foreign or supranational flag shall be displayed in a superior position or in place of the flag of the United States.

This protection of the flag of the United States was established with enactment of Public Law 107, 83d Congress.

Scientific research: In the 85th Congress, McDONOUGH introduced a bill to establish the National Aeronautics and Space Administration. The National Aeronautics and

Space Administration was established with the enactment of Public Law 568, 85th Congress.

In the 80th Congress, McDONOUGH introduced a bill to provide a research program to develop economical methods to convert sea water to fresh. This program is of vital importance to southern California, as a practical economical method which will convert sea water to fresh for industrial, agricultural, and domestic use, will help solve the all important problem of continuous adequate water supply to meet continuing needs of an increasing population and industry. This bill also provided for establishment of demonstration plants, one of which is scheduled for construction in southern California with construction beginning early in 1961.

The research program now in progress by the Federal Government to convert sea water to fresh was initiated under Public Law 448, 82d Congress.

McDONOUGH also introduced a bill in the 80th Congress to provide for Federal research into the causes and treatment of multiple sclerosis. This program was initiated under Public Law 835, 84th Congress.

Statehood for Hawaii: McDONOUGH introduced legislation in the 80th Congress to grant statehood to Hawaii. Hawaii became the 50th State in the Union with the enactment of Public Law 3 of the 86th Congress.

Automobile exhaust control: McDONOUGH introduced a bill in the 86th Congress to provide for the necessary research by the Surgeon General to establish the amounts of exhaust gases discharged by motor vehicles and their effect on human health to provide the basis for necessary Federal control to eliminate harmful exhaust from motor vehicles. Research was authorized under Public Law 493 of the 86th Congress.

Recognition of the American schoolteacher: A bill introduced in the 82d Congress by McDONOUGH provided for the issue of a special postage stamp honoring our American schoolteachers who receive so little recognition for the service they render to our Nation. The special stamp honoring the American schoolteacher was issued July 1, 1957.

Equal rights: A bill introduced by McDONOUGH in the 82d Congress provided naturalized citizenship rights to all immigrants having the right to permanent residence in the United States, and provided quotas for Asian and Pacific peoples. The provisions of this bill were included in Public Law 414, 82d Congress.

IMPORTANT DUTIES AND RESPONSIBILITIES OF CONGRESSMAN GORDON L. M'DONOUGH

Banking and Currency Committee

McDONOUGH is a ranking member of the powerful and important Banking and Currency Committee which has jurisdiction over the Federal Reserve Board, the Federal Home Loan Bank Board, the Export-Import Bank, the International Bank for Reconstruction, the International Finance Corporation, and all legislation concerning the financing and rehabilitation of homes, and military housing.

Housing Subcommittee

He is also a ranking member of the House Subcommittee on Housing which has made a specific and detailed study of the need for all types of housing throughout the United States, which includes multiple housing, individual homes, slum clearance, and rehabilitation, and reconstruction of blighted areas in the cities throughout the Nation.

Committee on Science and Astronautics

He is a ranking member of the Committee on Science and Astronautics which has the duty and responsibility to pioneer the study of interplanetary travel and communication, and outer space exploration. The efforts of this committee have resulted in the successful advances in the exploration of outer space and the establishment of its practical uses as typified by Tiros I, Pioneer V, Echo I, and others.

Joint Senate and House Committee on Defense Production

He is also a member of the Joint Senate and House Defense Production Committee, which has the responsibility of making a continuous study of the programs authorized by the Defense Production Act and of reviewing the progress achieved in the execution and administration of these programs for the defense of our Nation.

Voting record and attendance

With the multiple duties and responsibilities required by the foregoing committee assignments and congressional responsibilities, Congressman McDONOUGH has one of the best records for being present and voting on important and vital issues debated and voted upon in the House of Representatives.

He is also a member of the Inter-Parliamentary Union by appointment of the Speaker and approval of the House.

He was a U.S. delegate to the 46th Conference of the Interparliamentary Union, which was held in London in September 1957, and also a U.S. delegate to the 48th Conference of the Interparliamentary Union, which was held in Warsaw, Poland in September of 1959. Some 700 delegates from 46 countries attended the Conferences.

Resolution of the Commercial Law League of America

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, August 26, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following resolution which was adopted by the Commercial Law League of America at its annual convention, held in French Lick, Ind., July 17–20:

Whereas there are certain instrumentalities of the U.S. Government which are known as nonappropriated fund activities; and

Whereas these nonappropriated fund activities carry on their functions without benefit of congressional appropriations; and

Whereas these nonappropriated fund activities include such important Government commercial activities as the operation of military post exchanges and ship stores with annual gross sales in excess of $1,200 million; and

Whereas the nonappropriated fund activities are the only Government instrumentalities which are still cloaked with sovereign immunity from legal suit; and

Whereas it would be in the best interests of industry, commerce and labor that this cloak of sovereign immunity be removed from the nonappropriated fund activities: Now, therefore, be it

Resolved, That the Commercial Law League of America favor the passage of appropriate legislation to remove the sovereign immunity which shields the nonappropriated fund activities so that they might be sued in courts of law to the same extent as any other instrumentality of the U.S. Government; and be it further

Resolved, That the Commercial Law League of America instruct its duly authorized representatives to take appropriate steps to draft and to arrange for the introduction of proposed legislation to carry out the purpose of the above resolution, and to encourage its membership to actively support the same.

Report From Washington by Stuyvesant Wainwright

EXTENSION OF REMARKS
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 30, 1960

Mr. WAINWRIGHT. Mr. Speaker, this is my eighth annual report from Washington to the citizens of Long Island's First District. It is my custom each year to submit this report so that a record of the year's congressional business is available. At this point I ask your permission, Mr. Speaker, to address myself directly to the men and women of Suffolk and Nassau Counties.

The simplest breakdown is to divide this report into two parts: First, a legislative report on this 86th Congress, properly labeled the "Wait and See" Congress; the second part will deal with personal service rendered in the district and to the individual.

I. LEGISLATIVE SECTION

In 1958 at the conclusion of the 85th Congress I wrote in this report that the 85th had been a good session. That also was a Democrat-controlled Congress; but in 1957 and 1958 the Democrats cooperated in the national interest. It was not a major election year. Unfortunately, the same cannot be said for the present 86th Congress. With presidential elections in the offing, the Congress—with a 2-to-1 Democrat majority—turned from statesmanship to gamemanship.

The Democratic leadership—the JOHNSON-RAYBURN team—failed to take action on issues which they were later to incorporate in their party platform. They rejected all major requests made by President Eisenhower in January. A few of these requests were: liberalization of the Immigration Laws, a Farm Bill designed to eliminate "give-away," much needed additional Federal judgeships, new conservation proposals, a sound minimum wage, health insurance for the aged, a housing bill, school construction aid, a depressed area assistance bill, and proper financing of the interstate highway program. With legislation floundering, Congress recessed on July 2 for the hoopla of party conventions. Needed bills gave way to balloon flying, histrionics, and portly cheer leaders reviving the "old college spirit." After 10 days of hearts and flowers, 6 weeks of recess and NIXON and KENNEDY both nominated on the first ballot, Congress reassembled.

The Senate returned on August 8 and proceeded to accuse President Eisenhower of being "silly" to expect twenty-one measures to be passed in 4 weeks. Yet the President had been urging 18 of these measures for 2 years. The Sen-

ate then turned to discussing which presidential nominee had been absent from the Senate on more occasions. A crescendo came when 3 hours of oratory was delivered at the celebration of a Senator's 50th birthday. All this momentous drama played to a sell-out audience in the galleries. Occasionally a young spectator would lean on the rail under the approving eye of a parent, displaying a "Vote for ———" banner until an usher would smilingly reprove this offender to senatorial dignity.

The House convened on August 15 and in an entire week worked the grand total of 1 hour and 12 minutes. The Democratic leader did not even bother to show up in Washington. The reason the House loafed through the week of August 15 is the fact that KENNEDY and JOHNSON in the Senate could not unify their party—66 Democrats, 34 Republicans—behind the Democratic Party platform.

The reason the Senate twiddled its thumbs in political quandary lay in ineffectual leadership. During the final 2 weeks of the rump session, Congress could only manage compromise measures on care for the aged and minimum wage. Of the 21 needed bills advocated by the President, 4 were enacted—2 of these being the ratification of the Antarctica Treaty and the appropriation of funds for Latin American aid. Of the five "must" issues in the Democratic program, none was successful. The Kennedy bills on minimum wage and care for the aged were defeated by his own party.

The lesson here is that wishful thinking does not enact legislation. An old Democrat, Columnist Walter Lippmann, summed it up a few days ago as follows:

> It is plain enough that the Democrats would be better off if there had been no August session of Congress. Senator JOHNSON and Speaker RAYBURN, who engineered it, made a miscalculation. They supposed that the session would help JOHNSON to win the presidential nomination and then to shine in August as the great legislative operator. In fact, with President Eisenhower in the White House, the odds were overwhelmingly against any Democratic success. For while the Democratic majority can say "No" to the President, and they did, a Republican President can say "No" to a Democratic majority, and he did. In our congressional system positive political achievement in a very short session against the will of the President is impossible.

That the Democratic leaders failed, even with their immense majority, can mean only one thing. The Democratic majority refused to buy the Kennedy legislative proposals. Senator KENNEDY already feels that this congressional rejection of his program may cause his defeat in November.

II. PERSONAL SERVICE RENDERED TO THE DISTRICT AND TO THE INDIVIDUAL

Due to the incredible population growth of the first district—the 1960 census shows a count of approximately 900,000 persons—this personal service phase of congressional work has increased almost beyond the physical ability of my small staff and myself. It is virtually impossible for me to spend as much time on each case as I would like. However, you may be sure that I examine each individual problem to make certain that proper action is taken. I am especially proud of my professional, nonpolitical staff who have worked long, extra hours to serve you.

Of this year's several hundred military cases, over 94 percent have been successfully resolved. A great many people think this type of work is easy for a Congressman. It just is not so. For example, the Congressman can never himself authorize a compassionate reassignment or a transfer. The decision is up to the military service. All the Representative can do is to make sure all the facts are reviewed. Unfortunately, it is often true that the armed services get bogged down in the tremendous volume of peacetime administration. Request forms might lie weeks in a sergeant's "in" box. A Congressman stimulates the machinery, cuts the redtape.

The annual review of our files reveals over 100 veterans cases completed, 267 passports and citizenship cases expedited and 136 visa cases handled and processed. This is over three times the number received by the average legislator. The visa problems we receive are extremely complicated. One individual case, successful this year, was actually initiated early in 1955. It concerned a young man of Polish descent, born in this country. He was taken to Poland as a child by his parents and thus acquired dual citizenship. Having remained in Poland by necessity during the war, his chance to come to the United States finally arrived in 1955. Naturally, this was within his right as an American citizen. The problem arose when the Polish, Communist-controlled government, ignoring his American birth, claimed him as a national. After 5 years of negotiation with the State Department, our Embassy in Warsaw, the Immigration Service, and relatives in the United States, I am happy to report that the man and his family have arrived safely in this country. Incidentally the file of correspondence in this case is over 4 inches thick. It is also most gratifying to have been of assistance in having several foreign-born orphans admitted for adoption by couples in Suffolk and Nassau—five from Korea, two from Italy, two from Germany, and one each from Greece and Norway. Miss Alison Anderson of my staff has done unselfish service on all these cases.

Another service to this office is to fulfill requests for everything from a 400-foot Navy destroyer, the U.S.S. *Myles S. Fox*, for Port Jefferson's Fourth of July celebration, to simply a copy of a House resolution. Perhaps the bulkiest item in this category was the many flags that were flown at my request over the Capitol this Fourth of July. As a matter of interest, these flags will some day be collectors' items in that they were certified by the Architect of the Capitol as having been flown on the first day our 50-star flag became official. Since it is rather unlikely that there will be any additional States admitted to the Union for many years, or possibly ever, this event is historic. All flags so flown are paid for by the constituent.

As in past years, we have filled our entire quota to each of the service academies, including six at the Merchant Marine Academy at Kings Point. Perhaps the most important aspect of the service function is to keep you, the citizen, informed. This report is but one method. Each week while Congress is in session I submit to our weekly newspapers a column for publication. I also broadcast a weekly radio program over a number of local stations. Both of these efforts are designed to give you a better insight into the workings of our Government. This is based on my fundamental belief that a Representative is responsible to the people. What he does or fails to do in Washington is in the last analysis your concern. Perhaps the high point of this year's radio programs was the interview with Capt. Edward Beach, a distinguished friend and skipper of the Navy's atomic-powered submarine, *Triton*, immediately after the return from his epic, globe-encircling voyage.

Another important area of service is to provide you with proper postal facilities. In this instance it is necessary to repeat the fact that Suffolk and Nassau Counties are colossal "growth regions." I would estimate that an average of four letters a day leave my office on some postal matter. This year we have been especially fortunate in acquiring a record of 15 new post offices—Babylon, Center Moriches, East Hampton, East Islip, East Patchogue, East Setauket, Massapequa, Montauk, Shelter Island, Greenport, Shirley, East Quogue, Farmingdale, Farmingville, and Shoreham. In addition, Amityville now has "foot delivery"; Cutchogue, Farmingdale, and Greenport all have new R.F.D. routes; Port Jefferson will have outgoing mail on Sunday; Sag Harbor has delivery service to North Haven; and Westhampton Beach has had city delivery approved. Each one of these items represents many man-hours in Washington, especially on the part of Mr. Ralph A. Patterson of my staff.

As in past years there have been several million dollars in Federal Housing Administration loans and Defense Department contracts awarded to Long Island. This fact in itself is a mark of economic growth and national prosperity. The Army Corps of Engineers reports over $5 million in construction in Suffolk alone. While on the subject of the engineers, I might mention that their work at Fire Island Inlet has not been satisfactory. Guided by the New York Park Commission, they failed to provide the type of inlet channel to give maximum safety. Several tragedies have occurred. All that they did was to put sand on the park commission beach. All my attempts to keep this from happening were to no avail. At the present time I have asked for a complete review of the project. This along with my beach erosion program must be constantly watched or else the State park commission will force deviation.

My personal economic prediction for Long Island, highly accurate over the past 8 years, is extremely optimistic for the next 6 months. Despite every effort

of partisan Democratic politics to claim that we are in the midst of a depression, the proof contained in facts and figures continues to provide evidence of a healthy, expanding economy.

Finally, through our efforts the Federal Aviation Agency has agreed to locate a new $41 million air route traffic control center near MacArthur Airport in Islip, as well as to relocate a facility at Montauk.

As you know, I hold regular office hours in Huntington and Wainscott on alternate weekends to hear your problems and suggestions. In Washington I welcome your mail. An effective democracy must involve, by its very nature, the interest and opinions of all its member citizens. It is a pleasure and an honor to serve you in Congress.

Mr. Speaker, I thank you for this opportunity to address my annual report to the people of the First District of New York.

Life Line Program Has Grassroots Support

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 30, 1960

Mr. FISHER. Mr. Speaker, the patriotic and religious educational movement known as Life Line is having a tremendous impact on the thinking of Americans about important national issues.

Under Life Line's auspices, a daily radio program, originating in Washington, is broadcast over more than 100 stations throughout the country. Also, there is published a triweekly newspaper, Life Lines, containing up-to-the-minute discussions of matters that are of vital interest to all Americans who are concerned about preserving freedom in the world.

An example of the influence of the Life Line movement is shown in a letter recently received by the organization from a constituent of mine, Mr. Curtis Bozarth of Lampasas, Tex. Under leave to extend my remarks, I wish to insert this letter in the Appendix of the RECORD:

LAMPASAS, TEX., *August 25, 1960.*

LIFE LINE,
Washington, D.C.

DEAR SIR: I am a U.S. history teacher in Lampasas Junior High School and am very interested in the program called "Life Line." I have been working on a program in my classes which we call Freedom Foundation. We attempt to give the American way of life or our American heritage much greater stress than before. We started this program in 1951 and have had great success. As I listen to "Life Line" over WFAA, Dallas, Tex., I can see we are interested in the same thing, namely preserving our American way of life against government social problems.

In our school, from the 1st grade through grade 12, we carry on this program. We do a very simple thing and we think it is very successful. We stress eight basic principles which cover the American way of life; namely:

1. Freedom of the individual.
2. Importance of the individual.
3. Trust in God as each individual understand Him; freedom of religion.
4. Dignity of work.
5. The profit motive.
6. Free competition.
7. Government as a protector, not a provider.
8. Private ownership of property.

As you can see, we are trying to accomplish the same thing you are. We believe it can be done in the classroom. I am interested in securing information I can use in my class work or club programs. "Life Line" has so many good ideas that I am wondering of you could send me copies of talks or ony other information. I assure you that it will be used to good advantage.

Thanking you in advance for your trouble on my behalf, I am,

Respectfully yours,

CURTIS BOZARTH.

Jets and Whirlybirds

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 24, 1960

Mr. DAVIS of Georgia. Mr. Speaker, I have asked leave to extend my remarks in the RECORD by the inclusion of this editorial so that attention will be called to the fact that the Federal Aviation Agency is currently planning the inauguration of airline service at the new $100 million Dulles International Airport on July 1, 1961. It is claimed that this airport will be a showpiece since it has been designed in the most modern manner for the exclusive purpose of serving the Capital of our country. Dulles International Airport is located some 30 miles west of Washington. Even under the most optimum conditions, surface transportation can be expected to consume a very substantial amount of time. I am advised that new, 155 miles per hour, 25-passenger helicopters will be operating in the New York area next spring. With similar machines operating in the District, the distance between Dulles International and downtown Washington could be covered in under 10 minutes. It seems that this matter deserves the urgent attention of both the Civil Aeronautics Board and the Federal Aviation Agency.

The editorial follows:

[From the Washington Sunday Star, July 10, 1960]

JETS AND WHIRLYBIRDS

The Federal Aviation Agency wisely is seeking bids for a variety of transit facilities to link the Dulles International Airport to Washington and the National Airport, for the 30-mile distance to the city is sure to pose severe headaches when the new jet airport opens next summer. Along with ground transportation, however, we think the Civil Aeronautics Board would be well advised to consider the possibilities of regularly scheduled helicopter passenger service, of the sort already functioning at air terminals in New York, Chicago, and Los Angeles.

Such scheduled service as exists in these cities requires a special certification from the CAB, and thus far the agency has been reluctant to extend it. The main reason is that the New York-Chicago-Los Angeles helicopter operations all have required substantial Government subsidies, which have been granted on the theory that such service is a promising venture still in the developmental stages. This CAB attitude, of course, is understandable, for there are limits to how far such subsidy programs can and should go.

The need for subsidies, however, are expected to lessen progressively as new improved helicopter aircraft are developed. Already, one of the several firms which have applied for scheduled flight certification here has on order a fleet of 25-passenger turbine engine helicopters, which will constitute a step toward more economical operation. Other improvements are sure to follow.

There is no doubt that ground transit carriers, no matter what the future of the whirlybirds, will handle most of the airport-to-airport and airport-to-city traffic, for the passenger load will be enormous and certainly ground travel will be cheaper. As a supplement, however, officials are becoming more and more convinced that the Dulles operation also will provide a strong public requirement for an effective helicopter program. Its possibilities, at the very least, should be considered, and discussions to this end between officials of the FAA and the CAB should be initiated before any more time elapses.

Jewish Home for Convalescents To Honor Harry D. Cohen, Its President, on the Occasion of Its 45th Anniversary

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 30, 1960

Mr. ZELENKO. Mr. Speaker, on December 11, 1960, at the Hotel Biltmore, in New York City, the Jewish Home for Convalescents will honor its president, Harry D. Cohen. It is important that the history and efforts of this institution be made a part of this RECORD, for it is indeed a classic example of an American community effort.

In reciting the story of the Jewish Home for Convalescents, located at Grand View on the Hudson, and in bringing it to the attention of a larger public than the community in New York City which it serves, I do so because its story is a reflection of life as we know it in America—where everyday people are concerned about the welfare of a neighbor on a true humanitarian level. It is a story of good will, opportunity and achievement, and in its dissemination projects a plan which can benefit other communities. To paraphrase an early neighbor, bestseller author, Harry Golden, "Only in America" could this story be told.

It was back in 1915 in New York City that everyday people struggling to support their families, felt the existing need to succor the needy who had become ill and although discharged from the hospital, had no place to recuperate. This

socially creative urge expressed itself in the affiliation of some 15 small fraternal societies of the East Side which began a search for a suitable location for a rest home. They planned that on the basis of an annual $50 membership by enough affiliated organizations they could create the fund with which to initiate the enterprise. Neighborhood doctors Phillip Bereano and Julius Weiss, merchants Samuel Goldstein and Emanuel Bauman, restaurateur Solomon Hechter, and lawyer Morris D. Reiss were of the committee that brought back the report that the opportunity had been found. It presented itself when a roadhouse on the Hudson River, some distance from the city, had been foreclosed.

It would only need a deposit of $500 to sign the contract. The bank was impressed with the project and made the terms easy.

It had to be a labor of love—how else to explain the fact that East Side ladies like Jennie Leibowitz, Rose Markowitz, Betty Zucker, and Rose Cohen would go up to the building on the river to clean rooms, wash floors and sew linens. How else to explain how Eddie Stein and Max Orenstein would solicit the merchants of the East Side for their overstocked weekend perishable foods and cart them up so that needy sick people could be nourished and restored to health. The efforts of this pioneer group soon became the talk of the organizational life of the community and Roumanian, Hungarian, and Russian organizations joined them. In time there were some 110 affiliations. Labor and industrial groups joined in too, for here was a group of people that was really being helpful to working people. The Masons, Odd Fellows, and Pythians and their ladies' affiliates added their support.

Soon the bank's mortgage was lifted and there was now room for expansion. Solaria were built, modern plumbing introduced and an elevator installed. The department of social welfare under whose legal supervision the enterprise functioned looked upon the program with great approval—it rated it A–1 for plant and administration. The home had reached a point of development where it was referred to as "Grand View the Gem on the Hudson." What earned it that name was the scenic beauty of the Hudson River at that point. The patients were resting in chaises and lounging chairs on the large veranda overlooking the river, with sun, mountain air, and river breezes blending in a well balanced portion of a health restorative. Plentiful food, adequate rest, and medical supervision assured speedy recovery.

The patients represented a true cross section of the New York community, for this was intended to be a true nonsectarian philanthropic enterprise. They came from the city's municipal and private hospitals, from the social service agencies, and were recommended by the fraternal organizations and private physicians. They included people with backgrounds of 23 different nations, and of all creeds and colors. The project of the city people appealed to the neighbors of the surrounding villages and the nonsectarian character invited the interest of appellate division Justice Arthur Tompkins, Grand View Mayor James Bloor, and the Drs. Kline and Drs. Rooney, fathers and sons.

In its time the home attracted, in New York City, Dr. Julius Weiss, Leather Merchants Samuel Goldstein and Isaac Lippman, Counselor Morris D. Reiss, and Construction Contractor Maurice Schwartz to become presidents of the organization. Samuel Koenig, the textile executive, made gifts of substantial improvements. Dr. O. L. Friedman, the noted expert on geriatrics, headed the medical board.

Harry D. Cohen, who has been the president during the past 10 years, was an immigrant who had been brought up in a home which had encouraged philanthropic interest. Together with his brothers he found his way into the company of the pioneers in 1915. He prospered as a dress manufacturer and Miami hotel owner. During all this time he has given this philanthropic interest the same devotion he has shown to his own business activities.

Recognition has come to the Jewish Home for Convalescents in its selection as one of the agencies of the Greater New York Fund to receive an allocation from its annual fund raising campaign.

An example of the home's progressive outlook is the seminar which is conducted annually when the social workers of the hospitals are taken for a day's outing to the institution where coupled with a recreation program, a period is devoted to the exchange of ideas of how the service can be put to a more efficient use by the public, and speakers from the department of hospitals and the department of social service are heard.

The home with its 100-bed capacity presently accepts guests for a period of 2 to 4 weeks and under the new program a stay will be of longer duration. It is most gratifying that during its existence the home has brought important help to over 50,000 families in restoring people to health and enabling them to take again their positions as active members of the community.

During the past several years, with the discovery and use of new drugs and procedures, a new hospital approach to immediate patient ambulation reduced the need of convalescence of hospital patients in the home as the institution had been practicing it for many years.

Always progressive in outlook, the governing board studied the problem and learned how urgent was now the need for care for the aged sick. There was now an overwhelming demand for nursing care. It consulted with the department of social welfare and decided to request charter authority to extend its functions to include nursing care aid to supplement its dwindling convalescent care program.

The State's architects studied the building and plans were formulated to convert one wing of the building from a ward into a series of private rooms. They would experiment with the idea of a concentrated health and care program to serve the community's needs in one center instead of in separate institutions. The idea would encourage an ambulatory existence for all as part of the same health and restoration and maintenance program.

A new day was dawning. The opportunity to serve people would now be greater than ever and it would be measured by the readiness of the organization to adapt itself to the needs of the changing times, changes dictated by science, medical outlook, and community viewpoint. Since the care of the aged was a greater responsibility than the care of the fully ambulatory convalescent patient, the safety measures prescribed by law would be extensive and the home must be prepared to implement them.

And so now in its 45th year of existence, the institution is launching its programs to create these new facilities and is bringing itself to the attention of foundations, labor, industry, fraternal societies, and the legal and accounting professions to grant encouragement and material aid to a project which may serve as a pilot for implementation by other communities throughout the land, illustrating how a people's project, although unendowed, renders superb service.

U.S. Workers Entitled to Protection

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 30, 1960

Mr. DENT. Mr. Speaker, I am happy to see an increasing number of Americans becoming articulate in their demands for sensible and constructive thinking in our trade and aid programs.

Certainly it is not unbecoming to an American to demand equal rights under the law of supply and demand for American workers as well as American enterprise.

If any Member of Congress kids himself or his constituents with the argument that "if we do not do the Russians will," he is only doing the bidding of those amongst us in both our country and abroad whose whole interest in foreign trade and aid is the dollar he makes for himself.

While on the subject of Russia maybe our promoters of foreign trade and aid ought to know that the Russians have a trade policy that shows how they take care of home industries and protect their own markets.

The Russian Government forbids any article imported into Russia to be sold for less than the same article—or equal—manufactured in Russia.

We as Americans should remember one simple truth, "We are as strong internationally as we are at home—no stronger and no weaker."

I am happy to present for the RECORD the presentation by Thomas Carpenter, district 50, research assistant, before the U.S. Tariff Commission.

[From United Mine Workers Journal, Aug. 15, 1960]

U.S. WORKERS ENTITLED TO PROTECTION—THOMAS CARPENTER, DISTRICT 50 RESEARCH ASSISTANT, OBJECTS TO FURTHER TARIFF CUTS ON LOW-WAGE IMPORTS

A notice of intention to negotiate pursuant to the Trade Agreements Act of 1934 as amended and extended, including a list of dutiable items to be considered, was published in May 1960. Under schedule I entitled "Chemicals, Oils, and Paints," paragraph 1 through paragraph 95 of the Tariff Act of 1930, there appears a list of chemical, oil, and paint products, numbering some 425 items, imported into the United States and proposed for consideration in trade agreement negotiations. Generally speaking, these items are either directly or indirectly competitive imports of practically every major industrial chemical employer in the United States.

District 50, United Mine Workers of America, represents, for purposes of collective bargaining, a large number of workers who contribute to the production of either the source material or the end product of practically all of the items listed in the above announcement.

Taking into account the broad scope of the chemical industry in the United States, we find that a substantial number of the chemicals listed above are used by other industries in the production of durable goods: that is, building materials, electrical equipment, furniture and fixtures, hardware, lumber products, machinery, metal products, motor vehicles and equipment, and transportation equipment; and nondurable goods; that is, beverages, food products, leather and leather products, packaging, paper and paper products, petroleum and coal products, rubber products and textiles.

District 50, United Mine Workers of America, represents, for purposes of collective bargaining, a considerable number of workers employed in the manufacture of those products itemized in both the durable and nondurable goods lists mentioned above.

Therefore, in behalf of the members of District 50, United Mine Workers of America, who may be affected by the proposed negotiations, it is the desire of District 50, United Mine Workers of America, to object to further decreases in tariffs on the May, 1960, list.

Free enterprise in the United States has prospered and grown through competition. Competition has caused American industry to engage in exhaustive and costly research to make more products cheaper and better. We have today, resulting from an intranational competitive chemical industry, a most superior complex machine contributing its fair share to the success of the United States of America in peace and war. The members of District 50, United Mine Workers of America, employed in this industry have likewise made substantial contribution to the success of this industry and the maintenance of an American standard of living.

Now this industry and the people who work to make it successful turn to the U.S. Government for the least that can be asked; i.e., an opportunity to continue to serve the United States. The American worker is entitled to necessary protection from the competitive imports of products produced by the chemical industry in other nations where wages, working conditions, and living standards are greatly inferior to our own.

For example, the workers in the six nations comprising the European Economic Community receive average hourly earnings that are between 21 and 22 percent of the average hourly earnings received by the chemical worker in the United States. It must be noted that the chemical producer in the United States is required by law to pay minimum straight-time hourly wages of nearly double the average hourly earnings of the foreign chemical producer manufacturing these competitive imports.

American industry can continually improve its output per man hour, but productivity alone cannot make up the differential between the domestic industry wages and the wages paid to their foreign counterpart.

Blocs of nations such as the European Economic Community can within that geographic area remove trade barriers because this relatively small area (approximately one-sixth of the size of the United States) has within its confines similar living and economic conditions. The problem of differentials is of no significance in this community of nations. However, comparing the wages of this economic bloc with those of the United States, we have the following:

Comparison of average hourly earnings of nonsalaried workers in the chemical industry[1] in the European Economic Community (Common Market) countries with comparable workers in the United States for comparable periods

Country	Average hourly domestic rate	Earnings U.S. dollars	Percent of U.S. rate	Year
United States		$2.31	100.00	1958
Belgium:[2]				
Males	32.08 francs	.645	27.92	1958
Females	18.59 francs	.373	16.15	1958
Germany (Federal Republic):				
Males	2.51 marks	.599	25.93	1958
Females	1.64 marks	.391	16.93	1958
Italy	234 liras	.374	16.19	1958
Luxembourg	32.47 francs	.651	28.18	[3]1957
Netherlands	1.82 gilders	.482	20.87	1958
France	2.50 francs	.505	21.86	1958

[1] International Standard Industrial Classification 3[1] (chemical and chemical products).

[2] Hourly rate estimated on daily average earnings of 240.6 francs for male and 139.4 francs for female and an average work day of 7.5 hours. Combined average hourly earnings (excluding United States) equals $0.503. Percent of combined average to U.S. average equals 21.77 percent.

[3] Latest figures available.

Sources: Yearbook of Labor Statistics, 1959, International Labor Office, and U.S. Department of Labor, Bureau of Labor Statistics.

Based on the above data, we find such vast differences in the wage structure that it would seem completely unrealistic to presume that any real competition could exist between the domestic and foreign industries, based on labor costs portrayed in this table.

The vast and dynamic machine of the industrial United States requires all of its components in working order. The interdependence of various large and important segments of industry on the chemical industry was outlined above and discussed in a statement by the president of the Manufacturing Chemists Association before the House Committee on Ways and Means, Subcommittee on Foreign Trade Policy, in 1957, and is well known to interested persons and need not be restated here.

While it is true that some American chemical manufacturers have acquired chemical plant facilities in foreign countries and enjoy cheap foreign labor, that in itself would be no justification for the further reduction in tariffs in order to unfairly enhance their competitive position against the workers in the chemical industry in the United States.

It appears that our Congress is also concerned about the unilateral trade program. On January 26, 1960, Congressman BAILEY [Representative CLEVELAND M. BAILEY (Democrat, West Virginia)] submitted to the House of Representatives House Concurrent Resolution 512, and Senator KERR [Senator ROBERT S. KERR (Democrat, Oklahoma)] for himself and Senators THURMOND, CURTIS, DWORSHAK, ALLOTT, and JOHNSTON (South Carolina), submitted to the U.S. Senate, Senate Concurrent Resolution 104. These documents express the sense of Congress that the United States should not grant further tariff reductions in the forthcoming negotiations since:

"Profound changes in the international competitive standing of the U.S. producers have occurred since the passage of the Trade Agreements Extension Act of 1958;

"Whereas, imports have increased sharply while exports have declined."

Both of these resolutions are in appropriate committees of the respective Houses of Congress and we feel certain that they capably express a growing concern of Americans everywhere.

On March 30, 1954, President Dwight D. Eisenhower sent a message to Congress, on foreign economic policy, containing the following passage:

"I have approved the Commission's recommendations that the United States withhold reductions in tariffs on products made by workers receiving wages which are substandard in the exporting country. This policy shall be placed in effect. I have also approved the Commission's recommendations concerning raising of labor standards through consultative procedures and cooperation in international conferences such as those sponsored by the International Labor Organization."

The essence of the first sentence of the President's message, quoted above, is also stated on page viii of the Notice of U.S. Intention to Negotiate.

This announced policy should bear some weight in these negotiations where the wages paid in the exporting nations are substandard to those of the United States. The United States of America has adopted a very formal policy as to what is substandard. This is outlined in the Fair Labor Standards Act. This act proclaims that all persons, employed by employers engaged in interstate commerce, shall be paid not less than $1 per hour. If we are to compete in international commerce, the United States must require that any foreign producer, desiring to sell his products in the American market, pay his workers the minimum required to be paid under domestic policy. The alternative, then, is to impose necessary restrictions on competitive imports, produced under substandard wages and working conditions, as will more fully protect the American worker in his employment opportunities as a citizen and as a taxpayer.

WE SHOULD NOT UNDERSELL OURSELVES

The policies of the United States are not to be taken lightly by Americans themselves nor should they be undersold to our foreign counterparts.

The history of the United States is resplendent with bold and virtuous actions. In this matter, an action to raise the standard of living of foreign workmen to that of American workmen is preferable to lowering the American standard to that of our foreign competition.

In reemphasizing the position of District 50, United Mine Workers of America, in this matter, it is noted that under the Fair Labor Standards Act we have, by law, established certain restrictions upon the employment of child labor by domestic employers. Oppressive child labor is defined as the employment of minors (1) under 18 in occupations found to be particularly hazardous, (2) under 16 in any other occupation, and (3) under 14 in limited work outside school hours in nonmanufacturing and nonmining occupations.

Further, under the Fair Labor Standards Act, there is established a national policy that all persons, employed by employers engaged in interstate commerce, shall be paid not less than $1 per hour. Consideration is now being given by Congress of increasing the minimum under the Fair Labor Stand-

ards Act from $1 per hour to $1.25 per hour by step rates over a period of 3 years.

In connection with this subject matter, it might be well for both the Tariff Commission and the Committee for Reciprocity Information, during their investigation of this matter, to consider the imposition of additional import restrictions on goods produced by foreign manufacturers which pay wage rates to their employees and impose restrictions on their workers that are below the minimum standards required by law to be maintained with respect to domestic manufacturers within the United States of America.

We respectfully submit that we are opposed to any further reduction of tariff duties on competitive imports during the forthcoming negotiations.

At the Summit: Rubble and Reality

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 26, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Jay Lovestone as it appeared in the AFL–CIO Free Trade Union News of June 1960. Jay Lovestone is assistant director of the AFL–CIO department of international affairs:

AT THE SUMMIT: RUBBLE AND REALITY

(By Jay Lovestone)

Khrushchev worked hard to get the Paris summit. There he expected, as Hitler did at Munich, through massive intimidation, to have the heads of the democratic states make new concessions which would enable him to pursue more advantageously further political and territorial aggrandizement. Berlin, as the most exposed position of the democratic camp, was his immediate target. Sole possession of all Berlin would assure success for his next act of aggrandizement: another summit when he felt he would be strong enough to confront the democratic world with another ultimatum promoting his drive for Soviet domination of all Europe.

At the Paris summit, Khrushchev also hoped to have the Big Three agree to some arms reduction scheme without adequate control. Thereby, he sought to weaken Western capacity for effective military defense.

After Camp David, the Soviet dictator was optimistic. President Eisenhower used Khrushchev's own words when he referred to the "abnormal situation" in Berlin. He raised Khrushchev's spirits still higher when he said that the position of the Western troops in Berlin could not be guaranteed.

Christmas 1959 saw the free world in the grip of a great illusion about the Paris summit reducing international tension and assuring peace. Many were suffering from a great obsession that Khrushchev was endowed with a peaceful disposition and good will, which provided a unique opportunity for attaining just and harmonious relations between East and West. At the beginning of the new year, the free world was vacillating and fearful. And, to cap it all, the United States was approaching a presidential election campaign with its countless possibilities for confusion and partisan conflicts.

NOT FOR APPEASEMENT

But the American people were not for appeasement of Soviet expansionism. Intensely eager as they were for peace, they were not at all convinced that Khrushchev had broken with Stalinist cold war policy. At this time, labor, more than any other voluntary organization, reflected accurately the mood developing among the American people. In September 1959, the AFL–CIO convention, meeting in San Francisco, while Khrushchev was guest of the city, unanimously declared:

"Khrushchev has been more truculent and demanding in his aggression than Stalin. The present Kremlin course toward the problem of German reunification and Berlin is far tougher than the hardest Soviet proposals put forward under Stalin. In the current Berlin crisis, the Kremlin is seeking to push its territorial position considerably westward by absorbing first Berlin and then all Germany behind the Iron Curtain. No diplomatic niceties or jovial smiles can hide this ominous development."

The subsequent Adenauer and De Gaulle visits to the United States stimulated the maturing realistic American attitude toward the projected summit. State Department declarations began to reflect the growing sentiment among the people for negotiating the Berlin issue at the summit without being bound by costly concessions previously offered to Moscow by the Big Three Foreign Ministers at the Geneva Conference.

It soon dawned upon the Kremlin that the United States, with varying degrees of support from its allies, was not going to oblige Khrushchev. At this point, it is important to keep in mind certain dates significantly emphasized by the Kremlin. According to Khrushchev, an American U–2 plane had violated Soviet air space on April 9. During a reception at the Czechoslovak Embassy in Moscow, he said: "This reconnaissance plane * * * should have been shot down. But our military missed the chance, to say the least." Though fully aware of this incident, Pravda reaffirmed, on April 18, its faith in the strategy of peaceful coexistence.

But soon, there was to be a change of Soviet tune. On April 20, Under Secretary of State Dillon strongly assured the AFL–CIO Conference on World Affairs that the United States would not hand over Berlin to Moscow or accept any disarmament without effective control. The Dillon address was the turning point in Soviet calculations as to what it could expect at the Summit. On April 25, at Baku, Khrushchev replied to Dillon with a menacing declaration regarding Berlin. He said:

"Preservation of the present situation in West Berlin would signify the preservation of a breeding ground of provocations, a breeding ground that may give rise to all sorts of surprise developments and conflicts and may even cause a catastrophe."

This was the tipoff that the Kremlin saw practically no prospect for the summit settling the Berlin issue to its satisfaction. In addition, the Geneva disarmament negotiations showed strong Western unity in insisting on effective international control. By now, it was clear to the Kremlin that the summit was to meet in a new atmosphere and not in the clouds of Camp David.

WHY DID KHRUSHCHEV EXPLODE?

Unmindful of this important turn of affairs, many, who were prisoners of high hopes and grand illusions, were surprised and stunned by Khrushchev's torpedoing of the summit. Attempts to explain his destructive action have ranged from the serious to the superficial and the silly. These explanations generally rested on the false assumption that Khrushchev was forced into dynamiting the summit by heavy triple pressure: (1) by the Stalinists under Suslov's leadership; (2) by the military; and (3) by the Chinese Communists. One correspondent, William L. Ryan, cabled from Paris:

"The Soviet boss has been required to kick overboard all he has built with great care over the past 3 years. Apparently, in the Stalinist and Red Chinese view, his peace gestures went much too far and threatened communism as a constantly moving dynamic force." (May 18, 1960.)

But what edifice of peace did this Soviet dictator ever build? And when? In the Ukraine, where, as Stalin's right-hand man, he directed the murder of millions? In 1953, in East Germany, when he crushed the workers' revolt against life-sapping speedup and Soviet tyranny? When he threatened to rocket-bomb London and Paris during the Suez crisis? Through his Berlin ultimatum of November 1958? Through his support of Peiping in Tibet and Mao Tse-tung's seizure of more than 30,000 square miles of India's territory?

When Khrushchev ordered the merciless suppression of Hungary in October 1956, he knowingly risked western disillusionment with his peaceful coexistence campaign. He took the risk—and took Hungary. Despite his reprehensible savagery, he has been able to garner huge dividends—politically and morally speaking, for example, in the post-Hungary western culture exchanges with and so-called tourist pilgrimages to the U.S.S.R.

Time and again, Khrushchev admitted that it was Lenin who initated the so-called peaceful coexistence policy as part of the strategy for Communist world domination. Khrushchev's teacher and master, Stalin, pursued this strategy vigorously in the thirties. His peaceful coexistence flirtations with democracies were soon followed by the Stalin-Hitler marriage and the Soviet war against little Finland as an aggressor. These pages from the history of Soviet foreign policy help in understanding Khrushchev's good behavior before Paris and bad behavior at the summit.

In regard to Soviet foreign and domestic policy, Khrushchev's head and hand are no longer seriously questioned—let alone challenged—in the Kremlin hierarchy. The so-called anti-Party group of Malenkov-Molotov has been destroyed. Whether Molotov is a diplomatic goatherd in Outer Mongolia or Malenkov is a shepherd in some remote Soviet village, is of no political consequence. Marshal Zhukov and Bulganin are now political zeros. Just before the Paris summit, Khrushchev tightened his grip on the Party machinery through another substantial reorganization of the Party hierarchy. The illusions Khrushchev generated about himself in the free world and the prestige gained through the sputniks and the luniks have strengthened his authority throughout the Iron Curtain domain.

In comparison with his behavior at Paris, Khrushchev's speech in East Berlin, immediately after the summit debacle, was "restrained" and rather mild. It did not announce that Moscow was about to sign its oft-threatened separate peace with Pankow. It set no new ultimatum. This soft speech showed how wrong were those who maintained that Khrushchev had been forced by a Suslov-led hard-line opposition to be tough—3 days before—at Paris. In effect, that would mean that Khrushchev could, in one night, by telephone, defeat his so-called Stalinist opposition and again become good enough for the western democracies to put even greater trust in him and his coexistence campaign.

ROLE OF MILITARY FORCES

The argument that the military forced Khrushchev to torpedo the Paris summit, abandon his peaceful coexistence policy, and adopt a hard line is equally wrong. The theory that the military dictate Moscow foreign policy is not exactly new. Only a few years ago, we were told that the Soviet military were the great hope and force for the liberalization of Soviet policy at home

and abroad. Marshal Zhukov was then hailed as the great countervailing force to Khrushchev. This theory exploded when Khrushchev easily got rid of Zhukov in November 1957. Now we are asked to believe that the military are for an aggressive Soviet foreign policy, while Khrushchev is for an understanding with the West. Khrushchev, we are told, has to follow the "tough line" dictates of the army.

The theory is based on a misconception of the relationship between the Communist Party and the armed forces. The Soviet military are not the masters but the instruments and servants of the Communist Party. Any reversing of this relationship would mean the end of the one-party system in the Soviet Union. Such a change could not be brought about without a deep-going transformation, possibly a revolt or even a revolution.

Such a change could not be brought about without a deep-going revolution. Nothing of this sort has occurred in the Soviet Union before, during, or since the Paris fiasco. In fact, only a few days before the summit conference, Khrushchev purged the opponents of his foreign policy among the high command. Most prominent among the purged were Marshal Konev, commander of the Warsaw Pact armed forces and known for his intransigency in international affairs; Marshal Sokolovsky, former Chief of Staff, and Marshal Rokossovsky. The latter two were once closely associated with Zhukov. Malinovsky has always been loyal to Khrushchev, to whom he owes his present office.

Last January, as a step toward modernizing and increasing its striking power, the Red Army was reported to have been reduced by about 1,200,000 men, including 250,000 officers. This reduction decreased the prestige and power of the Army in relation to the Communist Party. Moreover, the ability of the U-2 unarmed reconnaissance planes to penetrate the Soviet defense system has certainly not enhanced its status.

Khrushchev has always met the slightest dissatisfaction in the armed forces with intensified ideological activities and increased party control especially of the officer corps. Toward this end, an increased number of periodicals have been published since the beginning of the year to propagate the Communist Party viewpoint in the Army. Several days before the Paris blowup, there was held a conference of secretaries of the party organizations in the Army. It was devoted, among other objectives, to the strengthening of party surveillance of the armed forces. In this connection, it is appropriate to cite Sovietskaya Aviatsiya:

"The role of party political work has grown; it has strengthened its influence on decisions about concrete tasks for raising military preparedness * * * This has found expression in the growth of the party ranks. Last year, 22 percent more soldiers, sergeants, and officers were accepted into the ranks of the CPSU than in 1958 * * * In all military units, full-fledged party organizations and party groups have been created." (May 12, 1960.)

Some have argued that Malinovsky accompanied Khrushchev to Paris, upon orders from his opponents, in order to supervise the Soviet dictator. This is not so. Since disarmament was to be considered at the summit, it was only natural for the Soviet Defense Minister to be there. Furthermore Malinovsky's presence was to symbolize Khrushchev's readiness to apply military intimidation. Marshall Malinovsky was taken along by Khrushchev as his wild dog and not as his watchdog. His role in Paris was also to foster the illusion that Khrushchev now heads a constitutional government, since he, like Eisenhower, was accompanied by his Minister of Defense and Foreign Minister.

THE CHINESE FAIRY TALE

Nor is there any foundation in fact for the widely held notion that the Chinese Communists forced Khrushchev to adopt their hard line and to blow up the Paris summit. Had Peiping been able to bring about such a reversal of Moscow's international course, the entire relationship between the U.S.S.R. and Communist China would have been basically changed. Then, Peiping would not be Moscow's junior partner—as it is today. Then, Communist China would now be the master of the Soviet Union. So complete a change of power relationship could flow only from a complete reversal of respective power positions. That would signify that there had occurred a profound weakening of the economic, military and diplomatic strength of the U.S.S.R. and a corresponding strengthening of the Chinese positions. This has not happened.

Of course, there are differences between Moscow and Peiping in regard to international and other matters. But these differences are in approach, in respect to propaganda forms, and not over principles. Between Moscow and Peiping, there is absolute unity over the ultimate goal of Communist world domination. For a number of reasons, Chinese Communist tactics are more rigid and inflexible, more intransigent and aggressive, than Moscow's. Mao Tse-tung's China is in an earlier stage of revolutionary development than Khrushchev's Russia. During the comparable stage—30 years ago—Moscow's international propaganda line also was harsher and harder against the democracies than it is today. In those days it was Moscow which pursued an ultra-left course.

Peiping also has its gripes and resentments over not getting more technical and military assistance from Moscow. Mao Tse-tung is bitter at the West for not recognizing Communist China as a big power, for excluding it from the summit and the U.N. Peiping wants more help from Moscow for overcoming this inferior world position and chafes at the Kremlin's inability to deliver. But what is decisive in regard to these resentments and differences is that Moscow continues to call the tune and has the last word. Thus, Mao's trusted adviser on foreign affairs, Yu Chao-li, echoed Khrushchev in Peiping's authoritative organ, Red Flag, by saying that "some ruling forces in the United States and in other Western countries have been forced to accept a certain moderation and to abandon, partially, the state of tension," because "the east wind dominates over the west wind." He further stressed:

"My country's Government and people, together with all Socialist countries, are decided to coexist peacefully with non-Socialist states. We welcome the relaxation of international tension. We hold firmly to the policy of general disarmament, the prohibition of testing and using atomic weapons, and we desire that between the two blocs nonaggression pacts should be concluded. My country's Government has always supported the efforts of the Soviet Government and of Comrade Khrushchev with regard to the opening of an East-West summit conference and other peace propositions." (Jan. 1, 1960.)

Six months later, during the 11th session of the General Council of the WFTU, meeting at Peiping, Liu Ning-I, president of the so-called All-China Federation of Trade Unions continued Mao's support of Khrushchev by saying:

"In order to avert the danger of war and safeguard world peace, we favor the holding of talks between the Socialist and imperialist countries and, through such talks, the settling of international disputes, the reaching of agreement on general disarmament and prohibition of nuclear weapons; and even the concluding of pacts of mutual nonaggression." (June 7, 1960.)

Liu wound up his remarks with all-out support "for the persistent and unflagging efforts the Soviet Union had made in this respect and the Soviet Government's new proposal of June 2 on universal and complete disarmament."

The aforementioned triple pressure theory rests on a dangerously false axiom. Its explanations of Khrushchev's outburst at Paris reflect and call for continued trust in his aims and policies as peaceful and liberal, if not yet fully democratic. Based on this axiom, Western relations with the Kremlin would lead to paralyzing complacency and accepting Soviet promises and pledges without enforcing guarantees.

The U-2 incident and whatever mistakes were made in handling it did not cause or lead Khrushchev to torpedo the summit. He merely seized upon this incident as the excuse for carrying out his previous plan to smash the summit. Before coming to Paris, Khrushchev had already realized that he could not get, at this summit, either Berlin or uncontrolled arms reduction. To participate in a summit without attaining his objectives would be a defeat for him. Such a defeat would hurt his position in world communism and slow down his drive for world domination.

And, at this time, Khrushchev did not dare to carry out any threat which might lead to war against the NATO powers. The very ill-fated U-2 incident, which he exploited, helped debunk his bragging about Soviet military invincibility. By now, America knew too much about the actual military strength and weaknesses of the Soviet military machine. Also, the Soviet people had been quite shaken by the fact that an unarmed American glider-type reconnaissance plane could, with impunity, penetrate their much-vaunted military establishment for more than 4 years. Khrushchev's insults against President Eisenhower were calculated to reassure the Soviet people that he is strong and not afraid to abuse even the United States.

Toward further overcoming the Soviet people's developing skepticism about his boasts of invincible military power, Khrushchev demanded an apology by President Eisenhower as a prerequisite for going on with the summit. He knew he could not get such an apology, because it would humiliate America in the eyes of the whole world. It would seriously undermine the faith of all NATO members in United States prowess and reliability for firm action at a critical moment.

There were costly mistakes in American and other Western democracies' policies which led to the nightmarish situation at Paris. Yet, the aftermath of the summit fiasco is not all bad. Had the democratic powers appeased Soviet expanionism, it would have whetted Khrushchev's appetite for further aggrandizement and aggravated the danger of a new world war.

WHAT IS AHEAD?

Khrushchev's truculent behavior in dynamiting the summit has served to disillusion many people who now see more clearly his role in promoting Soviet world domination under cover of hypocritical smiles and demagogical pretensions to peace. What he did at Paris has had a salutary effect on the German Social Democratic Party and important sections of the British labor movement which were, with all good intentions, drifting dangerously into suicidal pacificism.

The post-Paris world situation will become increasingly grave. Moscow will bring to bear all sorts of new pressures. The latest Soviet "disarmament" proposals are not an improvement of Khrushchev's past proposals. They only prove that the Kremlin will resort to all sorts of tricks for the purpose of undermining western capacity to resist Com-

munist aggression. The coming months will see Moscow intensifying the cold war to desperate levels.

Only the joint strength—military, economic, and political—of the western democracies has to date saved the free world from Soviet conquest and Communist domination. This power and unity of NATO must be greatly strengthened in order to discourage and deter Soviet aggression and preserve world peace and human freedom.

Paris has exposed the folly of relying on "Summitry." Our government and allies should utilize the regular and normal channels of diplomacy for negotiating with the Soviet Union agreements to preserve world peace. Even in these negotiations, the western statesmen should keep in mind that the traditional rules of civilized diplomacy do not apply in dealing with totalitarian dictators who are not bound by any rules—except those which they set for binding others and keeping them bound. Moreover, unless the democracies have superior strength, their negotiations with dictators will prove disastrous.

In all such negotiations, it is imperative for the democracies to make their own proposals for eliminating the sources of world strife. Without such initiative, the free world diplomats will tend to be negotiating on the dictators' basis and from weakened positions.

It is a human and moral necessity for every democracy to seek ways towards lasting peace. But we are not striving for peace alone. We are not striving merely to survive. We are striving for peace and freedom, for advancing human dignity and well-being—regardless of race, color, or creed.

The free world must recognize the urgency of all liberty-loving peoples uniting their capacities and resources for overcoming poverty and hunger, dictatorship, all forms of colonialism, and the threats to peace, freedom, and social progress. Such recognition demands energetic efforts to make the democratic world economically, politically, morally, and militarily superior to communism or any totalitarian despotism.

Whether this great goal can be achieved so that all mankind can enjoy peace and freedom, depends in great measure on the readiness and ability of free world labor to do more than its share in working and fighting for human well-being, dignity, liberty, and peace.

Hon. Edward H. Rees

SPEECH
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. TUCK. Mr. Speaker, I cannot allow this occasion to pass without associating myself with those who have made remarks in respect to the high type of public service rendered by our distinguished colleague from Kansas, the Honorable EDWARD H. REES. I served during the 83d Congress as a member of the Post Office and Civil Service Committee during the time that Mr. REES was chairman of that committee. He presided with dexterity and skill, and with fairness and impartiality. He enjoys the respect and confidence not only of the members of that committee, but of the Members of the House of Representatives in general. I soon came to recognize his true manly worth and his nobility of character. He certainly deserves to rank as he does among the great men who have served in the House of Representatives. He is a solid and substantial man. He possesses sterling qualities of character and he will be greatly missed when he leaves this body.

I wish him every happiness and contentment in his retirement and hope that he may be spared many more years of his useful and happy life. His friendship means much to me and I shall always remember our associations in the House of Representatives.

Hon. Paul Brown

EXTENSION OF REMARKS
OF
HON. A. PAUL KITCHIN
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 29, 1960

Mr. KITCHIN. Mr. Speaker, it has been a privilege to know and serve with my colleague, the Honorable PAUL BROWN, and as a result of this association I have a profound feeling of respect, admiration, and friendship for this truly great American.

PAUL BROWN has represented the people of the 10th District of Georgia well and conscientiously for over a quarter of a century, and I daresay there are few men in this body today who have a finer attendance record than has our beloved colleague. He has dedicated his life to the principles of sound constitutional government and the problems and welfare of his people have received his constant attention. He has made an outstanding contribution to the strength of our Nation and he is highly regarded by Members on both sides of the aisle.

It was with regret that I learned of his decision to retire and return to Georgia, but as he leaves the Congress I salute him for a job well done and sincerely trust that he and his fine wife will enjoy many years of good health and happiness.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

Appendix

How To Win a War

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 31, 1960

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to include the following article entitled "How To Win a War" which appeared in the August 1960 issue of the Freeman. The author, Ed Lipscomb, is director of public relations and sales promotion of the National Cotton Council of America. This is indeed a most thoughtful appraisal of the situation our country is facing today and I recommend it to the attention of all Members:

HOW TO WIN A WAR
(By Ed Lipscomb)

If all the words which have been written and spoken about the cold war with Russia could be placed end to end, they probably would match the length of an average satellite's orbit.

Every newspaper you read, every newscast you hear, gives the cold war day-to-day attention. Authors write books about it; politicians issue statements about it; and men on public platforms bring it into every presentation.

The reason is simple. Here is an international conflict which everyone agrees will determine the nature of civilization and the conditions of human life for generations to come. From the standpoint of the United States, we must either win this war or witness the death of our Nation.

I wish I could tell you how we are doing with it. Intelligent appraisal, however, is extremely difficult. Consider the matter of Russia's actual strength. I know, of course, that the Communists have been making imposing claims, but I also know that with Communists it is a matter of fundamental principle to lie. They have emphasized in their party literature since the days of Karl Marx that truth is anything which promotes the cause of communism. Evasion or denial of unwanted facts and the invention of plausible replacements for them are considered to be proof of patriotism rather than of perfidy.

I know that the Soviets have launched some satellites, and that strategically their progress here has been impressive; but I also have read that their moon shot was so arranged that no reputable tracking station could confirm or deny they even tried one; and I find that a responsible professional says their moon photographs are entirely a hoax. I know that their missiles are a fearful menace, and am confident they fired a big one into the Pacific, but again their claims of power and accuracy must be accepted or rejected on Communist word alone.

Surely they have large jets, since such a plane brought Khrushchev here; yet I understand that no airline in the world has ordered one for its own use, which suggests that a major aviation official was correct when he said that these planes are too inefficient and uneconomical for serious consideration.

They beat their chests and boast that they are going to overtake us in industrial production, with all the military capability this suggests; but even their own figures show that despite claims of mechanization, it still takes one farmer to feed himself and one other man, whereas an American farmer feeds himself and 22.

HOW STRONG ARE WE?

It is almost as difficult to feel reasonably intelligent concerning our own military strength. Judged on the basis of speeches by Senators and Congressmen trying to make political capital out of the defense issue—or statements from military officials seeking larger appropriations and greater control—one would have to conclude that we are years behind in missiles, that our strategic air force is archaic, that our warships are sitting ducks, and that in general our position is dangerous and deplorable.

Yet I have heard the Chief of Naval Operations assure a group of officers that we are capable of destroying 70 percent of the total population of Russia within 24 hours; and I have heard another admiral say that he was criticized by a congressional committee for insisting that we already have all the submarines we could possibly use for the destruction of enemy shipping.

Adding to the difficulty of intelligent appraisal by folks like you and me is the soap opera atmosphere of overdramatization which has become standard procedure with most of our editorial fraternity. The newscaster must get controversy into his program, even to his tone of voice; and daily headlines must stir the emotions whether anything of importance has happened or not.

When I add up the speeches and statements, the reports in print and on the air, a limited amount of actual knowledge, and considerable thought and study, I still must admit my earlier statement that I simply cannot give you a very intelligent appraisal of our current status in this fateful conflict with communism that means national survival or servitude for us all.

ON THE HOMEFRONT

I can, however, tell you positively how we can win it—the only way we can win it—and it is not merely by appropriating more billions for defense, or even by insisting that we get as much defense as we already are paying for.

We can win it only by winning a second war—a decisive war—that is going on inside our own boundaries. It is a war between forces which would keep us powerful by maintaining the initiative, the independence, and the self-respect of our individual citizens, and forces which through exaltation of the godhood of the group would assure the economic cataclysm and accompanying ideological collapse on which our foreign enemy depends to leave us and our allies incapable of successful resistance.

Amazingly, we tend to underemphasize the relationship between the intercontinental cold war and the conflict within our own country. We have become so conscious of comparisons in military strength and international influence that we fail to follow the signs and significance of our victories and defeats on a far more important front. We tend to become so afraid of Moscow that we are not sufficiently afraid of Washington.

This is the war which every major Communist leader has predicted we would lose, and in losing it insure our national destruction. Marx, Lenin, Stalin—even Khrushchev as late as his visit last year—all have declared again and again that this would be the pattern of our disappearance as a world power.

I said I could not tell you much about how we are doing in the military race with Russia. I find no such problem in connection with the war here at home. We are losing it. Let me call your attention to just three areas of evidence.

WE MARCH TOWARD INSOLVENCY

First in our overall trend. All of us know that it is definitely and rapidly in the exact direction our Communist opponents have so often visited would bring our total defeat.

The trend, for example, is toward national insolvency. We take counterfeit comfort in the fact that we are staying with a so-called "temporary" debt limit of $295 billion—a limit that recently was raised three times in 1 year. There is irony, almost cynicism, however, in the fact that this is merely the acknowledged debt. Our real Federal debt—in the form of fixed obligations already definitely established—amounts to $750 billion.

Even if we accept the acknowledged figure, then add the debts of State and local governments, and finally private debts, we come out with a total equivalent to approximately twice the current market value of every single tangible asset in the United States—the land, the mines, factories, machinery, office buildings, residences, livestock—everything.

You would think that such a financial situation—plus the warning inherent in the loss of half the purchasing power of our money—plus the fact that foreign countries are now holding 17 billion liquid dollars, half of them subject to demand in gold—plus the fact that the Federal budget contains built-in increases exceeding $2 billion for the year ahead—would lead to some sort of serious concern for economy.

On the contrary, in the last session of Congress, there were 20 major bills introduced which alone would have added between $50 and $60 billion a year to the present total of Federal spending.

Our slide toward insolvency is being given further impetus by the flight of some of our industries to foreign lands, and the weakening of others by steep increases in imports from abroad.

You know the story—in sewing machines, in electronic equipment, in office machines. You know that half the barbed wire and half the plywood used by the entire American market now come from overseas. You know that imports of cotton textiles have increased 216 percent in 5 years, and that foreign steel is coming into Cleveland at $55 a ton less than the price of steel produced right there in the same city.

You would think that the leadership of American labor would be alarmed. Yet the recent bitter steel strike was settled on the basis of a wage increase which, if applied to all employed persons in the country, would raise the total cost of domestically produced goods and services more than $45 billion a year.

DECAY OF PERSONAL INCENTIVE

The trend also is toward destruction of incentive.

A man of exceptional competence and ability finds that the more hours he works the less he earns per hour of effort, until he reaches the point where he can keep less than one-tenth of each additional dollar.

The investor in corporate equities finds that half his profits are absorbed before he sees them and that a further major portion must be surrendered after that.

The factory worker finds that if he exceeds the approved rate of production, he is disciplined by his union or frowned upon by his fellows, and that his progress depends on the passage of time rather than on his energy, his intelligence, or the merit of his performance.

The man who works intermittently qualifies for public compensation between jobs. If his earnings are small enough, he qualifies for admission into a communal housing unit. If he stops work at 65, regardless of health and ability, he qualifies for social security payments.

From the mental anesthesia of the television screen to the use of ever-greater leisure for the modern equivalents of stick-whittling and cracker-barrel-sitting, we see around us a glorification of mediocrity and deification of the unproductive which reflect loss of intellectual ambition, decline of crusading spirit, and decay of personal incentive.

POLITICAL PATERNALISM

The trend also is toward perpetual programs of private life by public plan.

Again and again we have seen the whole sorry story of political paternalism paraded before us—the design for the nursemaid State—the plan for government by fairy godmother—the promise of heaven-on-earth through ballots cast on Capitol Hill. We are familiar with the philosophy that the answer to every difficulty is more legislation or larger figures in appropriations bills—that all we need to do is turn over our problems, our paychecks, and our independence to political agents, and everything we should have will be provided.

Under such a philosophy, we have seen Federal outlays for civilian programs increase 83 percent in 6 years of a so-called conservative administration; and we already have reached the point where 40 million people—who with their families account for roughly half our total population—now receive checks from the National Treasury.

A VESTED INTEREST IN CONFLICT

The trend, then—the trend toward national insolvency, toward destruction of personal incentive, toward accomplished but unadmitted socialization and regimentation—this is a major reason for serious, even desperate, concern over our homefront war for survival.

A second reason is one we do not hear much about. It is the extent of our vested interest in a high level of international tension, and in the waste and extravagance that accompany it. The connection between our posture of prosperity and a continuation of Russian sword-rattling is so obvious that I have wondered at times why the coyotes of the Kremlin do not seriously array themselves in sheep's clothing, agree to drastic disarmament, abandonment of any form of aggression, and establishment of an international atmosphere of peace and serenity. Certainly I can think of no quicker or surer way in which they could throw us into the financial tizzy and tailspin they so greatly desire.

Think about these vested interests for a moment. The most powerful, perhaps, is the interest of our bureaucracy—the hundreds of thousands of officials and clerks required to give away billions of dollars, prepare multitudinous programs, and operate all manner of redtape in the much maligned name of defense. In a wholly relaxed atmosphere, what would happen to military aid for our allies, the bulging State Department, the Office of Civil Defense, and the most extensive peacetime fighting establishment we have ever sought to maintain? Half the Federal budget, more than half our Federal employees, and arguments for everything from subsidized bomb shelters to subsidized training for scientists would no longer be justified.

Think of industry—the contracts for airplanes, missile parts, guns, and equipment—the contracts for military construction, housing units, and a multibillion-dollar highway system promoted in the name of defense mobility—the contracts for building ships and submarines, and even for sirens in every city.

Think of labor—the political demands of the unemployed—the quick absorption or bankruptcy of public compensation funds—wage scales no longer buttressed by high-priced military buying.

If the economic impact of peace did not bring promptly the full financial cataclysm Mr. Khrushchev predicts, he would need only to wait a little longer while we adopted emergency boondoggling measures, arranged for displaced civil servants and industrial casualties to be put on public or subsidized payrolls, and brought our national budget back near its present level. Here would be the moment in history for him and his friends to throw off their sheep's attire and revert to wolfhood, so that we in turn would undertake to pile another major defense program on top of our newly achieved socialistic utopia, with an outcome he could readily depend upon.

The point here, however, is not to speculate on possibilities, but to express the conviction that the tremendous vested interest of influential and important American groups in the maintenance of international tension—and the part which that interest plays in giving our economy a hue of rosiness—is a second reason for concern on the domestic front.

MATCHING OUR WORDS WITH DEEDS

A third and tremendously significant reason why I say we are losing the home war is that practically nobody is fighting wholly, sincerely, and unreservedly on the side of the forces that would keep us strong. Our defense is dependent largely on men and groups who either fight on one side one day and the other the next, or who fight with one hand while accepting bribes from the opposition with the other. Since such divided loyalty invites defeat, I want to explain exactly what I mean.

If you will ask around, you will find that practically everybody is opposed to national insolvency, to destruction of incentive, and to political domination of private and economic life. You will find that he is opposed to preemptive statism, and to the fiscal irresponsibility that can bring it upon us. At least he will say he is, and the chances are he really is—except the part that applies to his own community or puts a few temporary extra dollars into his personal pocket.

I can cite you illustration after illustration, and you can add more from your own experience, of the howls that go up when a man faces the specific application, to his own pocketbook, of the very principles of national strength to which he claims allegiance.

Try to close a military installation because of the economies which can be made by consolidating it with one in another area—try to cut a subsidy of any kind—try to eliminate the expense of Federal involvement in real estate mortgages, or pork-barrel projects, or loans at less than cost—try even to merge two offices in the same city if the merger reduces payrolls—and you will hear screams from sources that range from corporation heads and bank presidents to the lowliest tenants of public apartments, depending entirely on who is personally touched.

I would like to make a statement here which I want you to correct, if I am wrong. I do not know of a single businessmen's organization, of any kind, which customarily passes resolutions on public policies, whose record will not reveal support for programs or projects which are part of our trend toward defeat.

Here, then, are three reasons for solid conviction that as of this moment we are losing, and losing at a fearsome pace, the second war—the domestic war—on which the outcome of the cold war depends: (1) the trend toward exactly the conditions which our mortal enemies have predicted would bring our defeat; (2) the vested interest of large and influential groups in the perpetuation of international tension; (3) the absence of sincere, honest, wholehearted support for the simple principles and practical policies that would keep us strong.

THE WAR INSIDE EACH OF US

The most vital question which confronts us, however, is not that of losses already sustained in this second war, or even the question of our current status, but the all-decisive question, "Can we win it?"

If we can, and if we do—if we are truly victorious here—we will defeat foreign Communists and international gangsters on any front they choose, bt it military, economic, diplomatic, ideological, or what you please. We will confound the hopes and contradict the prophecies of our enemies, and earn the respect and admiration of our friends.

How, then, can we win this second war? We can win it, and win it only, if you and I and others like us can win still another war—a third war. It is the war which each one of us must fight inside himself.

We may not have thought about it much—we may balk at even admitting it—but inside each of us, way down where we really live, there is going on a personal miniature of the domestic war I have just described. It is a war to determine which side we are really on—not which side we say we are on, but the side we really support.

Here is a war where it is impossible for you or me to be spectators or bystanders. It is impossible even to be neutral, for we ourselves are the battleground. Our decisions, and ours only, will determine the outcome.

Arrayed on one front in this personal war is a tremendous force of animal inclinations and natural desires—the appeal of immediate benefits, business advantages, or personal profits from political programs. Here also is the power of inertia. Here is reluctance to get involved. Here is temptation to kid ourselves into believing that just one man doesn't make any difference—or that because we don't get a direct dole or handout every month we are not a part of the problem—or even that we and our fellow Americans are somehow immune to the age-old and unchangeable law of cause and effect.

On the other side are our conscience, our judgment, and our knowledge that throughout all history no nation has ever survived which continued much further than we already have come down the road we are traveling.

Neither I nor any other man can tell you how you are coming along with your own personal war. I can, however, tell you how you can win it, and in winning it achieve personal invincibility which no amount of legislation can bring, and no amount of persecution by either fellow citizens or outsiders can overthrow.

PRACTICE WHAT WE BELIEVE

First, you can practice what you profess to believe. You can apply in private and business life the principles you publicly

espouse. Three out of every four average Americans, when asked about the principles they support, will give the answers which you and I know to be right. Among businessmen, the figure is more likely to be 4 out of 4.

Hence, I say that the first battle you and I must win is to practice what we profess to believe. To do otherwise means not only to lose our personal war, but through our hypocricy to influence others to lose theirs also. Just as the temperance lecturer who gets drunk is a greater liability to his cause than is the admitted barfly, so the businessman who preaches free enterprise while he participates in programs of political intervention is a greater liability than the admitted Socialist.

You can join the WCTU, vote for prohibition, circulate resolutions to close liquor stores, and wear a tall black hat and swallow-tailed coat complete with cane, but your neighbor still will not think you believe in temperance if he sees you staggering around your yard or patio at cocktail time. You cannot convince him that you are opposed to statism if you support resolutions calling for Federal funds for local projects, or make him think you believe in individual freedom and independence if you expect Washington to underwrite, directly or indirectly, your personal or business risks.

Unless you and I are willing to fight and win this very first battle, all three of the wars I have mentioned are already lost as far as we personally are concerned.

WE CAN HELP THOSE AROUND US

The second thing you can do is to initiate, in your own particular area of influence and konwledge—be it large or small—a conscious effort to help those about you to win their personal wars also.

You and I may not be able to do a thing about the personal wars of people in distant places. We may not be able to help everyone in our own State, or even our hometown. But there is not one of us who cannot be effective, both by example and by precept, among the people we see and talk to every day.

How much good will you be able to do individually? I do not know, but I know that neither you nor I nor any other man on earth can do anything except individually. I further know that we cannot wash out our responsibility with a signature on a bank check, when our brains and talents and personalities are more important than our money. And I know still further that if you will work among those about you with the aggressive, intelligent, result-getting leadership which is you at your best—if you will work with the same crusading spirit, the fire and the zeal, the loyalty and drive which you know to be typical of a dedicated Communist—you will be amazed at what you can do, and you will be amazed at how overwhelming will be your own inner victory.

How many of us will have to win our personal wars—in order to win the bigger war on the national front, and in turn the cold war itself?

The answer to that depends on the completeness of our personal victories and the amount of enthusiasm with which that conquest inspires us. Not many are needed if we are sufficiently on fire. Karl Marx, one man, was a misanthropic ne'er-do-well. Saint Paul was a puny epileptic or otherwise physically handicapped man. Hitler was a psychopathic paperhanger in Austria. Certainly no reader of these words would consider himself inferior to any of them—or to any of the twelve whom Christ himself assembled—before these became dedicated men. Perhaps we cannot match them in dedication, but the degree to which we succeed will determine the number who are needed.

PERSONAL VICTORIES NEEDED

Here, then, is our war—a war that is going to decide the nature of civilization, and the conditions of human life for generations to come. I have broken it into three parts, but for you and me it is not in reality three wars. It is one war. The outcome of it is wholly dependent on whether or not you and others like us are victorious on the battlefront that lies inside ourselves.

I won't win, no matter how the domestic front and the international front come out, if I don't win my personal war and contribute my utmost to similar victories for those around me. And I cannot be beaten, no matter how other fronts come out, if I know that I have applied to my daily life the principles in which I believe, and have given my utter best to those within my reach.

For my own part, I can give you my answer. I am going to win my war, and I am going to try so hard to help others to win theirs that I am going to know, down inside, that if everyone who reads this did the same, along with others across this land who feel and profess exactly what we do, there is no question as to the outcome of both our domestic and our cold war campaigns.

May I urge that you join me in the prayer and determination that we, each through his own victory and the effort which that victory inspires, may achieve the invincibility of soul which makes personal defeat impossible—that together we shall make a vital and conceivably decisive contribution to our cause and to our country—and that with others of like purpose and spirit we may demonstrate to all the world that an individual man must be respected when he earns the right to respect himself.

This is the war we are in. This is the way to win it.

Second Declaration of Independence

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, August 30, 1960

Mr. KEFAUVER. Mr. President, last Saturday night, at Hopkinsville, Ky., one of the outstanding Democrats of our Nation, the Honorable Buford Ellington, Governor of my State of Tennessee, delivered a fighting speech on behalf of our party.

Governor Ellington is a real leader, able, courageous, and well qualified to speak for our cause. His remarks at Hopkinsville were in character with his convictions and leadership. I ask unanimous consent that Governor Ellington's speech be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

SECOND DECLARATION OF INDEPENDENCE

(Remarks of Gov. Buford Ellington, of Tennessee, in behalf of nominees of the Democratic Party, general election of 1960, Hopkinsville, Ky., August 27, 1960)

Four years ago the sister border States of Kentucky and Tennessee wandered away from the Democratic fold and voted a Republican national ticket. That won't happen in 1960.

This is the year of Democratic return to national power by one of those lop-sided majorities we knew so well in the days of Franklin Delano Roosevelt.

This is the year that the Democrats will devastate the Republicans in the manner Harry Truman did at the whistlestops of 1948.

KENNEDY TO THE WHITE HOUSE

This is the year that Kentucky and Tennessee are going to join most of the other States of America in sending to the White House the able and distinguished JOHN F. KENNEDY, of Massachusetts.

This is the year that those famous "J-J boys"—Lyndon Johnson, of Texas, and Keene Johnson, of Kentucky—will join Jack Kennedy, in Washington, Lyndon as the next Vice President of the United States, and Keene as the next U.S. Senator from Kentucky.

This is the year that the First Congressional District of Kentucky sends back to Washington your distinguished Democratic nominee from Murray, FRANK ALBERT STUBBLEFIELD.

This is the year that Tennessee sends back to the Senate that distinguished Democratic son of hers, ESTES KEFAUVER.

Yes—this is the year of great victories for the Democratic nominees on the national, State and local levels—and it's the year that Kentucky State Democratic Chairman Smith Broadbent is going to have the pleasure of watching Republican National Chairman THRUSTON MORTON look up next November and wonder what happened.

TIME TO GO TO GETTYSBURG

Early one morning next January, JACK KENNEDY and LYNDON JOHNSON, by direction of the American people, are going to walk up Pennsylvania Avenue to the White House, knock on the door, and say: "Ike. Ike. Get up. It's time to go to Gettysburg."

WHERE WE ARE HEADED

Destiny has placed the great ticket of KENNEDY and JOHNSON before the American people—a ticket that will show a looking-on world who we are and where we are headed.

Those new frontiers Mr. KENNEDY is talking about are not fictional phrases to die at the end of a campaign. They are realities of our national life. They are elements of survival. They are necessities for the maintenance of the dignity and destiny of America as the foremost Nation of the world.

I LIKE KENNEDY

I like JACK KENNEDY. He heads our ticket, doesn't he? He won on the first ballot, didn't he? He drew a strong man like LYNDON JOHNSON immediately to his side, didn't he?

I like KENNEDY's fighting ability, his organizing ability, and his winning ability.

I went to the Los Angeles convention openly and heartily for LYNDON JOHNSON, just as my friend Earle Clements did.

But along with Johnson, with Truman, with Stevenson, with Symington, with Eleanor Roosevelt, with Earle Clements, and with other good Democrats, I accept the convention's one-ballot decision and I am just as openly and heartily for JACK KENNEDY as I was for LYNDON.

TOUCHIEST ISSUE OF THE CAMPAIGN

Especially do I like the calm, appealing, and forthright manner in which JACK KENNEDY is meeting the most unwarranted, yet the touchiest issue of the campaign, the religious faith issue.

America already has enough physical dangers upon its hands from elsewhere, without now getting into a religious hatred fight at home. I was taught religious freedom from childhood all through life. I was reared in a community where some of my closest friends were Catholic. I roomed with a Catholic boy in school. I did not hesitate when I assumed the duties of Governor of Tennessee to appoint Catholics in my cabinet.

There is simply no place in America for religious hatred among its people.

CLASSIC IN AMERICAN HEROISM

I am a Protestant, JACK KENNEDY is a Catholic; but it was that Catholic boy, whose ship was split in two, who was flung with surviving comrades in the Pacific on a war night, who helped save them, who went through an experience that is going to become a classic in American history of heroism—it was this young Catholic boy who was willing to lay down his life for freedom, and by such action help to make it possible for you and for me to be alive and to be here tonight. How do you hate a man like that?

DIVIDE, DELUDE, AND DAMAGE

Great agencies elsewhere in the world, who have attempted in this strange new space age to terrorize America, now sit back to watch this 1960 election in America, hoping that the fires of hatred will break out among us, and do what outside enemies could not do—and that is to divide, delude, and damage our people. Religious freedom is a major heritage of ours. It is not on the market. It must not be swapped for a vote of hate. A thin minority may attempt it—but I have the abiding faith in America that its freedom-loving and religion-respecting citizens will by overwhelming majorities go to the polls next November and vote for JACK KENNEDY or DICK NIXON solely on the basis of belief in their qualifications, and not on the basis of religious hatred.

I have that confidence in America. I have that confidence in my Southland. I have the that confidence in Kentucky, and I have it in Tennessee.

SECOND DECLARATION OF INDEPENDENCE

This is a rich moment for the Democratic Party to offer to the people of America in this campaign year a "second declaration of independence"—independence from fear, independence from hatred, independence from hesitancy, and independence from humiliation.

The dignity and the destiny of America are involved in this year's presidential decision.

What sort of policy, what sort of peace, is it that finds the President of the United States in rapid succession frozen out at the summit, blocked out at Tokyo, and shouted out by Castro?

FOREIGN POLICY CRAZY QUILT

Republican foreign policy for the past 7 years and 8 months has given us only a political crazy quilt, patched at all corners, and coming loose at the seams. We don't like it.

Republican achievements or efforts on the foreign fronts have left us with uneasiness and humiliation. We don't like it.

Republican domestic programs and policies have been decided too frequently to the better interest of highly placed and privileged people. We don't like it.

We have had 7 years and 8 months of Republican coolness and delay toward the welfare of our older people. We don't like it.

We have had 7 years and 8 months of secrecy and highhandedness in National Government. We don't like it.

ANTAGONISM TO TVA

We have had 7 years and 8 months of outright antagonism toward TVA. We don't like it.

We had the Dixon-Yates scandal. We don't like it.

We had the Goldfine scandal. We don't like it.

We had Sherman Adams. We had Talbott.

VICUNA COATS AND BORROWED RUGS

We had vicuna coats and borrowed rugs. We had private business solicitation on Cabinet stationery. We don't like that either.

And we have had 7 long years and 8 long months of Ezra Benson and the farm problem.

Now at this point watch Candidate NIXON enter the scene from another direction.

For 7 years and up until the Republican national convention this year he defended Mr. Benson.

Hardly had the nomination of the Republican Party come his way before Mr. NIXON decided that Mr. Benson would have to go.

Well, we Democrats haven't been too happy with Ezra from the beginning, but you've got to say one thing for him: He will stand up and fight.

He expected, of course, the Democratic attack.

"YOU, TOO, RICHARD?"

But now to receive a mortal political wound from NIXON must have made him understand what Caesar meant when he turned to Brutus and said: "You, too."

Ezra Benson has become a symbol of Republican political expediency. When it served their purpose to exploit him, they did so. When it was expedient to do away with him, down came the hatchet. And you may believe me, it was wielded by an expert.

FARM PROGRAM OF BOLDNESS

Having repudiated Mr. Benson and thereby his policies, the Nixonites are now searching for a farm program good for presentation during a campaign year.

But the Des Moines farm rally last weekend turned out to be perhaps the most enthusiastic preelection Democratic ovation in Midwest farm history. JACK KENNEDY and LYNDON JOHNSON got specific. They made bold pledges. They outlined practical measures.

It was their first public appearance together of the national campaign and it brought real hope to the surplus-burdened and parity-hurt farm people of America.

Declining farm incomes, said Mr. KENNEDY, and the Republican disinterest in farmers, are the major domestic issues of the current campaign.

POSITIVE ACTION NEXT JANUARY

Citing the Democratic Party platform, Nominee KENNEDY promised positive action beginning next January to raise farm income to full parity and to protect the family-type farm as a way of life.

The Democratic Party, he said, would not go back on its commitments.

It will present a program of positive action beginning in Congress next January. Included in that program will be a system of sterner farm production and marketing controls, if necessary, to gain better incomes. The program also involves a positive policy of management of farm supplies that would emphasize better diets for the low income at home, and more food for the undernourished abroad.

POLITICAL DUST STORMS

The Democratic record of keeping promises is one of the reasons that the KENNEDY and JOHNSON appearance at Des Moines was a vote-producing turn in this campaign.

It is evident that the farmers of America are now quite weary of the political dust storms blown on them these past 7 years and several months by the Republicans.

And there seems to be no great shouting from the Midwest for 4 years of Mr. NIXON, the man who defended the Benson policies, then abandoned them, and now wanders around without a convincing farm program.

BLACKBOARD OF HIS CAREER

Mr. NIXON, when standing before the vast blackboard of his political career, has many erasures he should like to make in 1960. Undoubtedly first of all, he'd recall the loose words that implied red and pinkish tendencies in general to the Democratic Party.

Today all the American people have all they can do to combat communism, and no one party can lay proper claim that it and it alone is the party of patriotism.

Nor can any one political party lay proper claim that it and it alone is the party of peace.

Yet that is exactly what the Republican propagandists will attempt again this year, and we might as well get ready for it.

NOW IT'S "POOR RICHARD"

We also might as well get ready for a propaganda picture of the Republican Party as one now suddenly stricken with poverty.

They have already pictured poor RICHARD as a boy suffering from malnutrition of cash on which to make the campaign.

That's the political joke of the year.

The Republicans have always managed to run an expensive campaign and to raise dollars when the Democrats were struggling for dimes and quarters. All you have to do for proof of that is to examine the official record of expenditures for the campaigns of 1952 and 1956.

FAST EYE ON MR. NIXON

We've got to keep a fast eye on this Mr. NIXON. He's the summer replacement on television instead of a rerun of Ike; and the makeup men have already gone to work on him, politically and for the screen.

Yet it is a matter of impartial observation that something between Mr. NIXON and the American people has always failed to click.

His image has never been a steady one.

We had the old NIXON and the new NIXON and what we will get this year is yet to become clear.

But it is clear that we have a real tough fight on our hands and we should dispose of it before we look around and attempt to count the house.

ONE-CENT ELECTRICITY

It isn't hard for any of us to appreciate what TVA means. We only have to reflect that of every item in our basic cost of living, electricity is about the only one that has not been pushed up by inflation. As a matter of fact, in this TVA country electricity steadily has become cheaper and more abundant.

"One-cent electricity" was a dream in our land for many years. The other day, TVA announced that for the first time, the average cost of the power we use so freely in our homes and businesses throughout the Tennessee Valley has dropped below 1 cent a kilowatt-hour.

DEMOCRATS MADE IT POSSIBLE

How's that for something the Democratic Party made possible, over the greatest sort of hate and opposition, more than a quarter of a century ago?

TVA'S NATURAL ENEMY

Throughout all the years of TVA history, the Republicans have been, despite occasional lip service to TVA, its most natural enemy.

All the visits of Eisenhower or NIXON to Kentucky or Tennessee can't undo the damage—and when and if Mr. NIXON visits us in this campaign, simple political honesty would require that he admit that insofar as TVA is concerned, it has no friend in him.

IN TRIBUTE TO ALBEN BARKLEY

Looking around this area, thinking of its wondrous development, realizing that the most of these things were made possible under Democratic vision, fulfillment, and direction, how could the good people of Kentucky do anything but vote a Democratic ticket this year, undoing that departure from Democratic ranks 4 years ago?

In simple gratitude and justice, you can't do anything else.

You've got to do it in honor of the memory and the greatness of a famous Kentuckian and American who also helped to make all this possible, the beloved Veep, Alben W. Barkley.

INDICTED FOR FAILURES

In this Democratic victory atmosphere tonight, we have thus far indicted the Republican Party for failures in the foreign field, fumblings and favors on the domestic front, disregard of many critical items of the welfare of our people, petty scandals and some not so petty, a general air of hesitancy and confusion, all of which have led to an uneasiness and a feeling of second-place status among the American people.

But in fairness at least one good thing may at last be said about what's happening under the current Republican national administration.

SPACE-AGE JACKPOT

In recent weeks we have hit the jackpot in space-age developments. All America rejoices. Security and survival are not partisan affairs.

Heretofore the Republican space-age policy was about as up to date as Benjamin Franklin flying his kite with a house key attached.

Now we are back in the race and maybe in the lead.

Yet one by one we have seen nation after nation resist or impede the efforts of America to form a great band of freedom-loving people around the world.

PLAYING SECOND FIDDLE

We were reduced, for a time at least, to playing second fiddle in the orchestra of the world.

Let's examine the casualty list over the past seven and a half years of the nations that have preferred cold wars with America rather than warm friendship.

The record is a ghastly one.

While the United States was not an active participant, this country was represented at a Geneva Conference between France, Russia, Communist China and Great Britain in the summer of 1954. We made no protest when this conference divided Vietnam at the 17th parallel, after which time the territory north of the parallel went Communist. The situation in Laos remains obscure and troublesome, and we still are in doubt as to the results of a revolution there 2 or 3 weeks ago.

MARINES IN LEBANON

We landed Marines in Lebanon in 1958 for the announced purpose of protecting American lives and property. In fact they were landed to try to keep order and keep Lebanon from going the same Red route as Iraq. Lebanon had been on the verge of a civil war for several months. When the Iraq revolution occurred in July of 1958, the situation in Lebanon became more acute. We were pulled off the hook by U.N. action, but the Lebanese people have never since been as close to the United States.

CRISIS IN SUEZ

We offered the Egyptians help on Aswan Dam, a project of vital importance to them. Our offer of help, for some reason, was withdrawn in an abrupt and rude fashion. This was followed within a week by Egyptian President Gamal Abdul Nasser's seizure of the Suez Canal, which was followed by the Anglo-French landings in Egypt, placing the greatest strain on the United States-British-French alliance which had been known for 150 years.

WE CLOSED OUR EYES

There are many situations in Africa only slightly more orderly than the situation in the Congo, but which have not received such widespread attention. We were not prepared for the rush of developments all over the continent. We closed our eyes to long-term trends in Africa. We were caught short, with no ready policy or trained personnel.

Iraq has moved from the position of a firm and stanch ally to a neutralist position at the best—a hostile position at the worst, following a bloody revolution in July 1958.

THE NIXON RIOTS

Vice President RICHARD NIXON's visit to Lima, Peru, and Caracas, Venezuela, in May of 1958 provoked rioting and anti-U.S. demonstrations. There is a generally increasing anti-U.S. feeling in Latin America today.

DIMINISHING INFLUENCE

All over the world, Communist influence is increasing; U.S. influence is decreasing. This is demonstrated by the Japanese riots, the Cuban situation, African affairs, and Latin American animosity. There is an increased feeling throughout the world of neutralism toward the United States, if not downright anti-Americanism. The Soviets have been able to intervene at will throughout the world, while we have seemed powerless to counterattack, gain or even hold our own ground.

We have failed to demonstrate that we were ably prepared to cope with any single major world crisis which has happened within recent years.

That's the Republican record.

Oh, in this hour, for the greatness of a Cordell Hull.

Coming out of that "lost face" status is the most imperative demand of the American people today, and the solution lies in the election of the new frontier ticket of JACK KENNEDY and LYNDON JOHNSON.

A "ONE BY ONE" NATION

The Republican Party, massing its privileged strength, seems never to have been willing or able to achieve a sympathetic relationship with the individual.

But this is a "one by one" Nation—a Nation made up of the freest individuals on earth—and the Democratic Party recognizes the status of the individual ahead of any clique or faction or group.

But examine now the Republican attitude toward the individual.

One of the coldest expressions of political philosophy was made in the Senate when Republican Senator KEATING, of New York, arose and said:

"We Republicans think of a person first as a taxpayer."

Well, our answer there is: We Democrats think of a person first as a human being. We are concerned first about his welfare, rather than his dollar. We are concerned at all times with human betterment.

TIME TO CHANGE SYMBOLS

Do not ever förget this: Back in 1952, when the Republicans rode into national power behind a military hero, Big Business became the political byword, and the Homburg hat became the symbol.

Well, the Democrats feel that the little businessman and the farmer and the laborer are also entitled to be in the picture.

It's about time for a few old straw hats and battered felts to be worn again.

JACK KENNEDY would look good in either, and he'll look good in that President's chair.

Thank you and good voting next November.

Job of Vice President—Partygoer or Potential President

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 31, 1960

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include an editorial which appeared in the St. Louis Globe-Democrat under date of June 24, 1960, as follows:

JOB OF THE VICE PRESIDENT—PARTYGOER OR POTENTIAL PRESIDENT

Senator MIKE MANSFIELD, of Montana, in a speech to the Senate yesterday, expressed the opinion that the Vice Presidency should go back to its former status of the pre-Eisenhower days in which the Vice President simply presided over the Senate and cast an occasional vote to break a tie.

The Senator specifically expressed disapproval of the Vice President sitting in on Cabinet meetings, being part of the administration team, and participating as an ambassador of international good will.

This is a unique and retrogressive point of view. The Vice Presidency, one of only two elective offices open to the vote of all the people, was sadly overlooked until President Eisenhower took office.. As a result, during the first 164 years of the Republic's history, some of our ablest and most potentially useful citizens vegetated in the job.

One Vice President resigned and another left town in disgust, and most of the rest until Mr. NIXON's time, devoted themselves to quips, ribbon cutting at ceremonial affairs, and going to parties which the President wanted to avoid.

Far more important, seven Vice Presidents succeeded to the Presidency. If there was one important similarity among all of them, it was their unpreparedness for the job—many of them not even being current on present plans, commitments and policies of the administration which they unexpectedly were called upon to head.

President Truman, for example, suddenly called to office at one of the most critical hours of the Nation's history, had been kept entirely in the dark by his predecessor and found himself at an appalling disadvantage in his early negotiations with other nations.

Vice President NIXON, on the other hand, because of the status given him by the President, has been by all odds the outstanding Vice President in our Nation's history.

In periods of the President's incapacity for reasons of health or absence from the country, he has been able to continue the administration of government on an even keel, which contrasts to the vacuums occasioned by the incapacity of former Presidents—notably that of President Wilson.

He has been well informed on all matters of policy. If he had been called upon to assume the Presidency, there would have been none of the period of uncertainty and "learning the job" which has featured all previous Vice Presidential successions.

On the international scene, Vice President NIXON has been a superb salesman of the United States wherever he has traveled—especially in South America and Russia where his dignity, quick intelligence, and ready graps of a momentarily shifting scene made legions of friends for America and the free world.

As a result of these experiences, Mr. NIXON is far beter qualified than any other for his party's nomination for the Presidency and, if elected, will make one of our greatest Presidents. In this fact, in all probability, lies Senator MANSFIELD's complaint.

It would be interesting to know how the presidential candidates of both parties feel on this matter and if they are willing to downgrade the Vice Presidency as Senator MANSFIELD suggests.

Our view is that the United States cannot afford the luxury of having the man who might at any moment have to take on the massive burdens of the Presidency trained only as a partygoer and ceremonialist. We need more—not fewer men—of topflight stature and availability in the second highest office of the land.

Emphasis on Penmanship and Spelling in School

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 31, 1960

Mr. YOUNG of North Dakota. Mr. President, the annual convention of the International Association of Master Penmen and Teachers of Handwriting was held from August 13–20 in Bedford, Pa. Among other business accomplished at this meeting was the unanimous endorsement of a resolution which had previously been passed by the North Dakota State Legislature urging school authorities to give adequate emphasis to penmanship and spelling in North Dakota schools. This resolution was called to the attention of the convention by a prominent citizen of my State and a good friend and former colleague of mine in the State Senate of North Dakota, the Honorable Henry C. Frojen, of Oakes, N. Dak. Mr. Frojen, himself an expert penman, is a member of the association mentioned above.

I am proud of the fact that North Dakota has apparently taken the initiative in this most worthy project of bringing to the attention of the proper authorities the necessity for teaching our children the importance of good spelling and good penmanship at an early age.

Mr. President, believing that the action of the convention of the International Association of Master Penmen and Teachers of Handwriting is of national importance and of interest to members of the U.S. Senate, I ask unanimous consent to have printed in the Appendix of the RECORD a portion of a newspaper story which appeared in the Bedford Inquirer of Bedford, Pa., on August 19, 1960, together with a copy of the resolution adopted by the North Dakota State Legislature and endorsed by this international association.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PENMANSHIP GROUP MEETING HERE BACKS NORTH DAKOTA ACTION

A resolution passed recently by the Senate and Legislature of North Dakota urging school authorities to give adequate emphasis to penmanship and spelling was unanimously endorsed Tuesday in a resolution approved by delegates attending the annual meeting of the International Association of Master Penmen and Teachers of Handwriting at the New Hoffman Hotel in Bedford.

Copies of the resolution will be sent to the National Association on Education, the largest educational organization in the country.

The resolution follows:

HOUSE CONCURRENT RESOLUTION E–1

EMPHASIS IN SCHOOLS ON PENMANSHIP AND SPELLING

Whereas communication by handwriting means is still the most prevalent method; and

Whereas the art of penmanship and the rudiments of spelling are no longer properly emphasized in our primary schools, high schools, nor in our teachers colleges; and

Whereas the art of writing legibly and accurately can only be learned and improved by reinstating and emphasizing teaching of penmanship and spelling by rote and by emphasizing its importance in society to students and teachers thereof; and

Whereas some of the most intelligent thoughts are often lost or uncommunicated because of illegible handwriting today; and

Whereas businessmen and others are observing increasing difficulty with the inability of their employees to spell properly: Now, therefore, be it

Resolved by the House of Representatives of the State of North Dakota (the Senate concurring therein), That the superintendent of public instruction, the board of public schools, the board of higher education, the presidents of the various teachers colleges, and the principals of each elementary and secondary public school in this State, are hereby directed to place greater emphasis on instruction of students in the art of penmanship and the rules of spelling, so that our future adults will not be handicapped by inadequacy in these essential fields; be it further

Resolved, That copies of this resolution shall be sent by the secretary of state to the superintendent of public instruction, each member of the board of higher education, each member of the board of public school education. The superintendent of public instruction will mimeograph copies for the principals of schools and presidents of each teachers college.

Jets—Aid to Latin America

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 31, 1960

Mr. FASCELL. Mr. Speaker, recent events in Latin America have focused new attention on the Caribbean, Central, and South America.

More and more Americans are becoming increasingly aware of their economic difficulties. We are also recognizing the tremendous economic interdependence which almost inextricably binds us.

A modern-day miracle is making its helpful contribution in solving at least a part of the problem of our southern friends.

The helper? Jet speed. The faster you can get from here to there, the more people are going to take the trip.

This proposition, proven by scientific studies, looms large today as a potent factor in bolstering the economies of numerous Latin American countries. For today is the jet age, and a 575-mile-an-hour jetliner gets people from here to there 40 percent faster than ever before.

Thus comes the obvious conclusion: Where the jets go, more people are going. The nearly 1 million U.S. visitors who traveled to the Caribbean, Central, and South America in 1959 spent almost $200 million in the area.

Even a 20-percent increase in this travel, which experts predict the jet airliners can easily generate, would mean an extra $40 million poured directly into the economic bloodstream of those countries this year.

Proof that reduced travel time brings increased travel is compiled in a survey made by Pan American World Airways, pioneer carrier which has been serving virtually all of Latin America for three decades.

As further proof, three Caribbean resorts whose air facilities enabled them to be among the first spots to welcome jet service last year recorded impressive travel gains.

In Puerto Rico, which Pan American has made the jet capital of Latin America with some 62 jet flights a week currently, travel figures practically shot off the chart under the impetus of the faster, more luxurious service. Puerto Rico's visitor count zoomed from about 270,000 in 1958 to a staggering 331,000 last year. Similarly, the number of visitors to Nassau rose from 178,000 to 264,000, and Jamaica shot up from 170,000 to 191,000.

Jet speeds combine with the changing work pattern of U.S. employees to provide even brighter prospects for Latin American vacation spots. "The paid vacation of from 2 to 4 weeks has become almost universal in the United States," the Pan American survey notes. "This circumstance would appear propitious for an increase in vacation travel to more distant points." This is especially significant in view of the fact that the survey found approximately 52 percent of the clipper travelers were vacation travelers.

And as a final bright note, the traveling public has obviously taken instantly and enthusiastically to jet travel everywhere on all airlines.

The Connally Reservation and the World Court

EXTENSION OF REMARKS
OF
HON. JAMES O. EASTLAND
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Wednesday, August 31, 1960

Mr. EASTLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a forceful editorial entitled "Facade for the Jungle," published in the Wall Street Journal of today, August 31, 1960.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FACADE FOR THE JUNGLE

This newspaper believes that the Connally reservation is a useful protection of the U.S. interests, since it permits this country to determine when an issue before the World Court is primarily an American domestic matter and hence beyond that Court's jurisdiction.

But whether one likes or dislikes the reservation, it seems to us President Eisenhower, in addressing the American Bar Association, made a curiously unconvincing case for abolishing it.

We seek, the President argued, peace with justice, which is another way of saying a world of law. "Look at what peace means. And how are we ever going to travel that road unless we are ready to make some concessions?"

The idea that the United States is somehow deficient in making concessions in international affairs won't stand much scrutiny. At vast expense we have tried to rehabilitate and defend much of the world.

The United Nations itself, for what it is worth, could not function without its primary financial and other support from the United States. As for Connally-type reservations, other nations have put strictures on the terms of their adherence to the World Court, but no one seems to demand concessions from them.

More importantly, abandoning the Connally reservation could not possibly bring a just peace or a world rule of law one whit closer. The stipulation is valuable from the point of U.S. interests; its removal would be of zero value from the point of view of advancing peace.

The issues of peace and war, we may be very sure, lie far deeper than anything like this. The world's peace is threatened by the militant Communist conspiracy which never hestitates to violate any treaty or precept of international conduct when it suits its purposes. We can and must resist communism, but we can have scant hope of converting the Communists any time soon.

Because of these realities in the world situation, the United Nations has never been able to live up to the reason for its existence. Declaring unity among the nations could not bring actual unity when one powerful nation seeks only the tragic unity of Communist dictatorship.

That is even more specifically true of the World Court, which it was hoped would be the U.N.'s judicial arm. We have just had a glaring example of Soviet "justice" in the Powers trial; obviously there is no common denominator between the Soviets' legal philosophy and our own.

At one point in his speech Mr. Eisenhower himself indirectly emphasized this difficulty. He noted the debt the writers of our Constitution owed to the legal tutelage and traditions of Britain; indeed, the Constitution as we know it could not have been written "except for this great heritage."

So it would be possible to have an international court including the United States, Britain and other countries with a common understanding of the nature of man and law. But how can anyone talk seriously of a functioning World Court that could embrace such nations along with Cuba, the Congo, and the Kremlin?

The trouble with all this, it seems to us, is that people sometimes let their desire for real peace lead them into wishful thinking. Thanks to Communist imperialism, the "world rule of law" that we have today is the law of the jungle. It may be pleasant to think that this can be changed simply by establishing forms and institutions. But without the substance of a common legal understanding, the forms must be empty.

In fact, worse than empty. For to the extent that the United States involves itself in a World Court that is but a facade for the law of the jungle, it puts itself at the mercy of the jungle. That is why we think it necessary to keep the Connally reservation. And why we think it a peculiar sort of folly to encourage the delusion that an international fiction can alter the world's stark actualities.

Veterinary Positions—U.S. Department of Agriculture

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 31, 1960

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

RESOLUTION ADOPTED, 97TH ANNUAL MEETING, AMERICAN VETERINARY MEDICAL ASSOCIATION

VETERINARY POSITIONS—U.S. DEPARTMENT OF AGRICULTURE

Whereas the recruitment, classification and retention of doctors of veterinary medicine in the Department of Agriculture presents a serious problem; and

Whereas this problem has received the attention and study of the American Veterinary Medical Association for a number of years; and

Whereas recommendations made to the Department of Agriculture has not solved the problem; and

Whereas this Association is quite concerned about the effect the shortage of veterinarians has on programs in the Agricultural Research Service particularly in connection with disease prevention and control, inspection and quarantine, and research; and

Whereas this Association believes a review and reclassification of veterinary positions in the Department is indicated: Therefore be it

Resolved, That the American Veterinary Medical Association, in convention assembled, requests the U.S. Civil Service Commission to conduct a complete occupational study and survey of veterinary positions in the U.S. Department of Agriculture and other agencies in the Federal Government; and be it further

Resolved, That a copy of this resolution be transmitted to the Chairman, U.S. Civil Service Commission, the chairman of the Senate Committee on Post Office and Civil Service, the chairman of the House Committee on Post Office and Civil Service, and to other apropriate officials as deemed desirable.

Foreign Policy Association

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Wednesday, August 31, 1960

Mr. FULBRIGHT. Mr. President, on August 19, 1960, at the request of the Foreign Policy Association, I placed in the Appendix of the RECORD a statement prepared by the organization in response to certain charges against it. I have now received a communication from Mr. Edgar C. Bundy, general chairman of the Church League of America, which takes exception to a portion of the Foreign Policy Association's memorandum. I am glad to ask unanimous consent that their telegram be inserted in the Appendix of the RECORD.

I may say that I have not had an opportunity to check the accuracy of the memorandum prepared by the Foreign Policy Association or earlier material put in the CONGRESSIONAL RECORD, which the Foreign Policy Association's memorandum was designed to rebut. My purpose in inserting this material is to make available to the public the two sides to this controversy.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

WHEATON, ILL.,
August 26, 1960.

Hon. J. W. FULBRIGHT,
U.S. Senate Office Building,
Washington, D.C.:

In your extension of remarks, CONGRESSIONAL RECORD for Friday August 19, 1960, you insert statement of Foreign Policy Association in which utterly false statements appear concerning my alleged associations with anti-Semites and with two men in particular Al Zoll and Harry A. Jung. FPA then states, "So far as we know, these statements in the pamphlets have not been challenged." I have never been associated with anti-Semites in any manner, shape or form in my entire life nor with Messrs. Zoll or Jung. I have deplored anti-Semitism publicly and in writing. I have been the target of extreme abuse by the anti-Semites because I would have no truck with them. Not only have the statements in National Council of Churches pamphlet quoted by Foreign Policy Association been challenged by me as soon as they appeared in print but I have on file letters from National Council of Churches officials and other who have distributed this vicious propaganda that they are not using it anymore and have regretted its use. One church editor was forced to retract and apologize for passing this falsehood on when notified of impending lawsuit for libel and slander. I respectfully request that my reply to the Foreign Policy Association insertion in the CONGRESSIONAL RECORD be incorporated in the RECORD before this present Congress adjourns.

EDGAR C. BUNDY,
General Chairman, Church League of America.

"The Role of the Organized Profession in Achieving the Goals of Education"—An Address by Robert H. Wyatt, Executive Secretary, Indiana State Teachers Association, August 8, 1960

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 30, 1960

Mr. BRADEMAS. Mr. Speaker, few men have done more for public education in the State of Indiana than Robert H. Wyatt, the able and dedicated executive secretary of the Indiana State Teachers Association. Mr. Wyatt has served in that position for 22 years and every Hoosier has reason to be grateful to him for his continuing effort to improve the educational system of our State.

Earlier this month, Mr. Wyatt delivered an address to some 600 leaders of education in Indiana—school superintendents, principals, college presidents and college professors, presidents of local education associations and committee chairmen—on "The Role of the Organized Profession in Achieving the Goals of Education."

ELEVENTH INDIANA LEADERSHIP CONFERENCE

Mr. Wyatt's address, delivered at French Lick, Ind., on August 8, 1960, to the 11th Indiana Leadership Conference, is one of the finest discussions of the need for our investment in education and improving our educational system that I have ever seen. As the only Indiana member of the House Committee on Education and Labor, I am particularly proud that Indiana can offer to the Nation such thoughtful leadership toward meeting the challenges confront-

ing American education as Mr. Wyatt's address represents.

Mr. Speaker, under unanimous consent I insert the text of Mr. Wyatt's address at this point in the CONGRESSIONAL RECORD:

THE ROLE OF THE ORGANIZED PROFESSION IN ACHIEVING THE GOALS OF EDUCATION

(By Robert H. Wyatt, executive secretary, Indiana State Teachers Association)

A DESIGN FOR THE DECADE

No real solution to the problems of education can be had without first identifying our objectives and viewing them in context with all the other social and economic problems with which they are so inextricably entwined. Obviously, we cannot as a professional organization involve ourselves directly in all of the problems that face the people of this country. Just as certainly, however, we cannot grasp our own problems, nor the solutions; nor can we interpret them to the public which must ultimately make decisions unless we do treat them in the perspective of education's place in the total social and economic structure.

WILL LAISSEZ FAIRE EDUCATION DO THE JOB?

There are many among us who really and truly believe that an educated citizenry is good for the economy. This thesis was powerfully expounded in the well-known book of the U.S. Chamber of Commerce, entitled "Education: An Investment in People." But there are many of this group of citizens, however, who believe that a sort of laissez faire policy in education will do the job; and that if we starve the educational facilities of a community severely enough, somehow or other the illiterate victims of the starved community's program will rise up and produce a school system from local effort. If we had unlimited time both as a nation and as individuals, such a program would not be so serious; but we do not have that kind of time. We do not have it in relation to our faster growing neighbors and opponents overseas. But what is more important we do not have it in relation to the fulfillment of the responsibilities and imperatives that are so explosively emerging in the social conscience of hundreds of millions of previously suppressed people in this country and throughout the world.

GROWTH OR DECAY

On the other hand, fortunately, there is a growing number of our people who hold to the opposite philosophy that the whole Nation will advance or stagnate together; and that if substantial numbers of our people are denied education or, because of ignorance or poverty or other reason, cannot free themselves from disease or malnutrition or ignorance or slums or crime, then most certainly these undeveloped human resources cannot and will not produce the economy that must undergird a high standard of living and national strength. Any sound philosophy of national growth must be based upon this thesis: That it is the social and intellectual development of our people that ultimately produces the foundation of economic growth necessary to achieve our ideals as a nation.

In the past month, we have been witnesses to the two national conventions of our political parties. It is interesting that one of the major issues discussed at both of these conventions is the issue of speed of economic growth. This was particularly sharp in the Republican convention between Gov. Nelson Rockefeller, of New York, who believes that our rate of growth must be doubled in the immediate future and Senator BARRY GOLDWATER, of Arizona, who seems to believe that we should let this subject alone.

The Democratic platform sets as an economic growth objective "an average rate of 5 percent annually." The Republican platform asserts that much has already been accomplished in the matter of annual growth, but believes that "we can and must do better."

There is thus a substantial agreement on goals. There is also a substantial measure of agreement that growth must be primarily a matter of expanding the American system of free enterprise. The Democrats say that "free, competitive enterprise is the most creative and productive form of economic order that the world has seen." The Republicans "accord high priority to vigorous economic growth and recognize that its mainspring lies in the private sector of the economy." On the issues of how to reach their common objective, the parties are at variance on such matters as high interest rates, credit policies, monetary programs, tax reform, and the role of the Federal Government in stimulating a rapid development of our human resources. I shall not invade the differences between the parties, nor comment upon their performances in the past. That I shall leave to you and your own judgment.

PROGRESS MOVES IN CYCLES

Those of us in the teaching profession have a natural interest, however, in history, and are inclined to be sensitive to the larger movements and trends of history, and to integrate into our projections and our planning the lessons of the past. It is sometimes dangerous to attempt to interpret the great swings of history, or to determine our immediate location in those large cycles of human experience. It is a relatively simple and basic fact, however, that these movements follow the line of mass psychological changes.

WE SPENT LAVISHLY IN THE TWENTIES

The enormous public spending requirements of World War I were followed in the twenties by an equally great effort on the national level to cut back public expenditures, reduce taxes, reduce public debt, and restrict the growth of our economy as far as public participation was concerned. At the same time, the great economic growth that attended the war spilled over into the twenties for a period of some 10 years and stimulated the greatest buying of consumer goods, private speculation, and wastefulness that our Nation had ever seen.

This period is noted for very few significant social advances so far as solving our massive problems of disease, housing, hospitalization, natural resources, education, problems of the aged, unemployment and disability practices, and a host of other social problems involving the welfare and the savings and investments of little people.

WE MADE SOCIAL PROGRESS IN THE THIRTIES

It is scarcely necessary to recount the events of the thirties and the sharp revulsion of public opinion that produced our all-time greatest decade of social advances in the fields that had been so obviously neglected in the twenties.

It is scarcely necessary to recount the events of the forties, with their second great outpouring of money and energy for World War II and succeeding conflicts. It is likewise unnecessary to recount the explosion of emotionalism that found its expression in witch hunts, attacks upon intellectualism and foresight of any kind, and the vigilante operations that had their forerunners in the Klan of the twenties, and previous war-generated manifestations of overemotionalism.

But, in the late forties and early fifties, we had the good fortune of having a somewhat larger segment of our population with an awakening insight into economic history, and a sufficient social consciousness to realize that a nation grows strong and remains healthy only if attention is paid to massive, widespread economic growth of all the people, and to the massive, widespread development of human resources through the enlargement of the welfare of human beings of all ages, and all abilities, and all stations in life.

OUR ECONOMIC GROWTH RATE DECLINES

As a result of this new and enlarged understanding of the imperative role of government in a modern free nation, we passed through a period, specifically 1947–53, in which we experienced an economic growth of some 4.6 percent annually, and a very considerable concern for the problems of all kinds of people. Since that time, the forces which came to the fore in the twenties have gained preeminence in our national life, and by one means and another, have brought about a slowdown of economic growth and attention to social problems. As the decade of the fifties ended, we were moving at an economic growth rate of some 2.6 percent and the control group in our Government had crossed off or vetoed a significant number of measures for the development of our human resources through better housing, better education, and healthier communities. At the same time our neighbors in Western Europe were experiencing a growth rate of something over 4 percent annually, and our major rival for world leadership, Russia, and our newfound friend, Japan, were experiencing an annual growth rate of 6 percent.

PRIVATE COMSUMPTION VERSUS PUBLIC PROGRESS

At this point, I should like to look more closely at this disturbing trend in the history of the 1950's. Since 1953, our gross national product—which is the sum total of goods and services produced and purchased—has increased in terms of 1959 dollars from $417 to $479 billion, a net gain of $62 billion. In 1953, this product consisted of 61 percent personal consumption of goods, 24 percent Government purchases of goods and services, and 15 percent private investment. In this 6-year period, the $62 billion of net gain in production was allocated as follows: 92 percent for private consumption rather than 61 percent, 15 percent to private investment as compared to the same figure in 1953, and an actual loss of 7 percent in Government purchases of goods and services.

Now, not all private consumption is either good or bad. Not all government purchases of goods and services are either good or bad. But two striking facts are plain to be seen by either a layman or an economist:

BILLIONS OF DOLLARS OF PRIVATE CONSUMPTION FOR LUXURIES

1. Billions of dollars of private consumption for alcohol, tobacco, and an enormous list of trivial gadgets and luxuries are either useless or actually destructive as far as increasing the economic growth and productive power of our Nation. A disheartening bit of evidence in this respect emerged from a survey of corporation-employed scientists by the Opinion Research Corp. in which 78 percent testified that management was misusing their talent in ways which to them seemed unproductive except in management's push for profits. Another bit of sobering testimony appears in a recent release by the Committee for Economic Development which reports the conclusions of six visiting Soviet economists who questioned the ability of any economy to stand up against the enormous losses from: (a) the economic waste in frequent model and style changes; (b) the $11 billion spent for advertising; and (c) the influence of the banking industry on Government monetary and credit policy.

BILLIONS OF DOLLARS OF UNMET NEEDS

2. That there are billions of dollars of unmet, crying needs in those areas in which

only Government can function, such as the education of our raw human resources, the treatment of our disease-laden swamps and rivers and streams, the clearance of our disease- and crime-breeding slums, the building of parks and hospitals and recreation facilities for millions of our children and adults, and a host of other needs which are totally beyond the capacity of the individual to meet. There is only one force in this Nation that can function in some areas of redirecting and rechanneling our gross national product and that force is the Government.

THE CHALLENGE OF THE SIXTIES IS GROWTH

As we enter the sixties, therefore, it seems to me that we are poised somewhat ominously at a point not too unlike the last years of the twenties as far as national policy and direction are concerned. We have on the one hand a powerful and predominant group who think in terms of remaining forever on the present plateau of economic activity and public expenditure; while on the other hand there are those who grasp the fact that healthy economic growth evolves from the development of human resources whether through public expenditures or private action. This concept, so vital and so imperative for our national health and our military preservation must become a basic part of the thinking of America and its leaders in the 1960's, or the growth of this Nation will be stagnated into mediocrity.

PUBLIC UNDERSTANDING IS RISING

In spite of the fact, however, that there is a large reactionary force opposing Government action to stimulate economic and social growth, there are, at this juncture, the most hopeful signs of widespread, popular understanding of this concept that we have ever seen in our Nation's history. In the last several years there have been numerous pronouncements of groups of businessmen, scholars, and professionals that have identified these twin objectives of national economic growth and national development of human resources as being integral parts of the same thing. Some examples of this rising mass of evidence of public understanding are these:

1. Edwin J. Dale, Jr., in the New York Times, February 7, 1960: "A new 'great debate' is raging. * * * The debate has been inspired by a single idea: that the basic trouble with American society is that we devote too much of our resources to increasing an already affluent level of private consumption, and too little to public services of all kinds."

2. Walter Lippmann, on February 9, 1960 (New Republic, Mar. 7, 1960): "The central issue of the world struggle is whether the Soviet system or a liberal system can best deal with the problems that beset mankind. In that struggle we shall surely lose if we tell the world that, though we have the richest economy in all history, our liberal system is such that we cannot afford a sure defense and adequate provision for the civil needs of our people."

3. The Rockefeller Bros. Fund report, "The Pursuit of Excellence," in 1958, concluded: "All of the problems of the schools lead us back sooner or later to one basic problem—financing. It is a problem with which we cannot afford to cope half-heartedly.

"It will not be enough to meet the problem grudgingly or with a little more money. The Nation's need for good education is immediate; and good education is expensive. That is a fact that the American people have never been quite prepared to face.

"Perhaps the greatest problem facing American education is the widely held view that all we require are a few more teachers, a few more buildings, a little more money. Such an approach will be disastrous. We are moving into the most demanding era in our history. An educational system grudgingly and tardily patched to meet the needs of the moment will be perpetually out of date. We must build for the future in education as daringly and aggressively as we have built other aspects of our national life in the past."

4. The Committee for Economic Development, an organization of several hundred industrial leaders and scholars ,in a pronouncement January 1960, entitled, "We Can Have Better Schools," calls for a substantial increase in public expenditures for schools, including Federal assistance to education, and closes with the statement: "The expenditure required will contribute more to the welfare of the country than many existing Federal expenditures, some of which could well be cut. But if the program implies higher taxes, they will be justified by the anticipated benefits. The committee is now reviewing the problem of Federal taxation and expects in a subsequent statement to present suggestions for financing essential Federal expenditure, including those recommended here for education."

5. The Conference on Economic Progress (December 1959), a nonprofit, nonpolitical organization, devoted to research, drawn from business, labor, and agriculture, in a document entitled, "The Federal Budget and the 'General Welfare'" had this to say: "For a number of years, the Federal budget has shown a marked trend toward dangerously inadequate outlays for domestic programs, essential not only to individual well-being, but also to the overall health and growth of the American economy.

"Even from the limited viewpoint of the national security, many experts and informed laymen are now agreed upon this: A deficiency in weaponry is compounded by deficiencies in education, health services, and basic research. As a nation, we are piling up supplies of the trinkets that we enjoy, but slighting the basic services which everybody needs. Taking a broader viewpoint of the world challenge confronting us, we cannot afford a further neglect of insistent human needs, on the spurious ground that we 'cannot afford' to do better while still in an arms race. To survive the all-pervasive race that we are really in, we must demonstrate mature awareness of the need for progress on many fronts, and dedicate ourselves to this well-balanced program.

"All who point this out recognize fully that this many-sided progress requires vigorous and sustained efforts by individuals, private organizations, State and local governments, and the Federal Government. But they further recognize that the Federal Government must take the lead, and largely through the Federal budget. The Federal budget determines our national priorities; it is the most important tool for identifying and helping to accomplish our greatest purposes as a nation. If the Federal budget falls down on its tasks, others cannot rise fully to theirs."

6. The Committee for the White House Conference on Education: "Ignorance is a far greater handicap to an individual than it was a generation ago, and an uneducated populace is a greater handicap to a nation. This trend is obviously going to continue and quicken.

"An important reason for the growing importance of education is the plain fact that the schools have become the chief instrument for keeping this Nation the fabled land of opportunity it started out to be."

7. A report entitled, "Human Resources: The Wealth of a Nation," published in 1958, as a result of a program organized and originated by President Dwight Eisenhower while at Columbia University, to discover the reason for such widespread failure on army tests in World War II, found that the "squandering of our human-resource capital" had grown out of the failure of our society to invest adequately in the development of its people, particularly its young people during their formative years.

8. And even the U.S. Chamber of Commerce, in its widely read book entitled, "Education—An Investment in People," in 1955 states: "People who have a good education produce more goods, earn more money, buy and consume more goods, read more magazines and newspapers, are more active in civic and national affairs, enjoy a higher standard of living—and, in general, contribute more to the economy—than those who are not so well educated."

9. The penetrating statement of Marion B. Folsom, a former director of the Chamber of Commerce of the United States, in 1958 on leaving the cabinet as Secretary of Health, Education, and Welfare: "In the main, we as a people seem inclined to concentrate our energies on the production of things, rather than on the development of human capacities and resources. * * * The outpouring of consumer goods is one of the landmarks of our society. Certainly there is nothing wrong with this, particularly so long as the multiplication of material goods ultimately serves the best interests of men. But we do not invest nearly enough time and thought and money in the intellectual and moral, social, and physical development of the man who makes all these material things possible. We retard the progress of our society by a pinchpenny attitude toward investments in health and education, in fundamental research."

10. Of course, no comment on this important subject would be complete without a reference to the greatest contribution of the decade to thinking on this subject by Dr. Kenneth Galbraith of Harvard University in his book, "The Affluent Society."

I do not propose to go forth on a crusade to persuade our people to quit smoking or drinking or doing a whole host of other foolish things that are either illegal, immoral, or fattening. But I do say that we can line up these two sets of values alongside each other and throw into bold relief the absurdity of the statement that we cannot afford to process our own raw material.

THE ROLE OF GOVERNMENT IN NATIONAL DEVELOPMENT

The Conference on Economic Progress, referred to above, estimates that the part played by the Federal budget in our economy has declined from 18.7 percent of our total production in 1954 to 16.2 percent in 1960, and that if sufficient participation by the Federal Government had been carried on in those years to produce a national economic growth of 4 to 5 percent annually, there would have resulted a total increase in gross national product of $199 billion. This increased production at present tax rates would have produced, according to the report, an additional $65 billion of public tax revenue. It is fascinating to note what the conference report reveals could have been done with this additional $65 billion of public tax revenue, all of which would have been derived from that unproduced national production. Here it is:

1. Twenty percent of those revenues would have built 140,000 classrooms (3,500 for Indiana), the President's estimate of our shortage, and would have paid teachers $1,000 more each year.

2. Ten percent of this tax revenue would have built 360,000 hospital beds (9,000 for Indiana).

3. Three percent of this tax revenue could have replaced 1.4 million slum homes with good homes (35,000 for Indiana).

4. Twenty percent of it—$13 billion—could have met the Soviet arms and space challenge.

5. Eight percent of this would have made our social security payments more nearly adequate.

6. Ten percent of it would have increased economic assistance overseas by 50 percent.

7. Twenty-nine percent could have wiped out the total Federal deficit for 1959.

These data reveal in a dramatic way the answer to the question: Where shall we get the money to educate and develop our human resources? The answer: These resources when developed will produce the economy to pay for them, and there is no other way.

THE STATUS OF EDUCATION IN INDIANA IN 1960

Let us examine what has occurred in Indiana in the recent past and what must occur in the immediate future.

First, as to the salary of instructional personnel:

In the last two decades, teachers' salaries in Indiana have risen 300 percent while the income of all of our people has risen 447 percent. In the decade of the forties, Indiana teachers' salaries rose 135 percent compared to only 91 percent for the teachers of the Nation as a whole. In the decade of the fifties, teachers' salaries in Indiana rose 70 percent as against 85 percent for all teachers in the Nation. Other school expenditures followed a similar pattern. It is necessary to conclude from these facts that Indiana in the forties outpaced the Nation, but failed to do so in the fifties.

When we observe that State participation in local schools in the fifties declined from 40 percent of expenditures to 30 percent, it is easy to identify the fact that the State simply did not hold up its share of the cost and that the State legislatures in 1953, 1955, and 1957 refused to enact legislation to undergrid the teacher salary structure. There is one bright spot in 1959–60, however, when we note that Indiana's average salary rose to 10th place in the Nation and that the increase in this 1 year, 1959–60, was the largest increase of any of the top 10 States of the Nation. This result is traceable to the enactment of the 1959 minimum salary schedule of $3,600 to $5,600, and might have been better if the original proposal of $4,000 to $6,000, which was passed twice by the house of representatives, had been agreed to by the senate and the Governor.

Let us examine the status of Indiana teachers further:

1. In 1958, the median family income in the United States stood at $397 above the median salary of Indiana classroom teachers.

2. The average personal income per employed member of the labor force stood at $495 above the average salary of classroom teachers.

3. The average beginning salary for beginning teachers as indicated by 315 local salary schedules in Indiana last summer was $4,156; while the average for engineering graduates stood at $5,868; accounting graduates at $5,196; sales graduates at $5,064; general business graduates at $4,932; and other graduate fields at $5,412.

4. Studies reported in the "1960 Salary and Economic Trends Handbook," published by the Research Service of the Indiana State Teachers Association, reveal that college graduates generally experience an increase in the first 10 years of employment of 100 percent in salary. No salary schedule in Indiana provides more than a 50-percent increase, while most of the remainder provide increases far below that point.

SUBSTANTIAL PROGRESS IN SALARY SCHEDULING

Through the work of the local, State, and National salary committees and workshops, we have made substantial progress in the last few years in developing sound principles of salary scheduling. The objective of beginning salaries for teachers comparable with those of the other professions to be doubled after 10 years of service and a master's degree is an objective that has become widely recognized by all who believe in education. The objective of working conditions comparable to those in other professional and business fields with reference to hours of work, workload, sick and emergency leave, and the like are making slow but sure progress into the thinking of school boards and administrators.

A further look at Indiana's ranking in the Nation reveals the following:

1. Indiana stands 42d in the Nation in per capita expenditures for all purposes.

2. Indiana stands 39th in the Nation in total State and local taxation as a percentage of personal income.

3. Indiana stands 34th in the percentage of school revenue provided by the State.

4. Indiana stands 27th in the Nation in expenditures per pupil in public schools.

5. Indiana stands 28th in the Nation in public school expenditures as a percentage of personal income.

6. Indiana stands 19th in the Nation in per capita personal income.

All of this means that Indiana is not putting forth the effort to provide public schools, either in terms of dollars or in terms of a percentage of her personal income, that is being put forth by most of the other States.

WHY DID EDUCATION FALTER IN THE FIFTIES?

To summarize, we stand 19th in ability and 28th in the percentage of our income that we spend for schools. This situation is the result of a grouping of causes.

One of them is that in the decade of the fifties Indiana has subordinated the development of many of her human resources to an overpowering drive for a tax program that would please business, particularly interstate business, and attract industry to Indiana. This has resulted in a tax program which still places on the antiquated property tax 70 percent of the cost of schools and 100 percent of the cost of many other local services. This antiquated property tax is accompanied by the only so-called gross income tax in the Nation. This tax fails completely to reach the receipts of interstate commerce and falls with highly inequitable incidence upon various individuals and groups without relationship, in many cases, as to whether profits or losses are being taxed. The gross income tax is the darling of Indiana largely because it produces money and does not have the opposition of large corporate and interstate business.

Indiana is not making any attempt to devise a tax system geared to ability to pay. She is making no attempt to reach interstate receipts. She is making practically no attempt to tax certain substantial mineral and oil production by severance taxes as exist in other States. In addition to this, the administration of the property tax is excessively bad.

We shall not find a reasonable solution to this tax dilemma until we courageously attack the problem on both the State and National levels and take into account that the States and the local communities are, in fact, powerless to reach certain sources of revenue which exist within their own borders and that they, in fact, will not be reached until a reform program of taxation and distribution on a national level is achieved.

WHAT ABOUT SCHOOL FINANCE IN 1961–63?

As to the State tax picture for the next biennium, however, we should recognize the following significant factors as a part of our planning. We have just come through two major developments in school financing. One of them is the 50-percent increase in taxes in 1957 on the State level and the other is the adoption of a new finance program in 1959. The 1957 increase in taxes produced some $80 million of additional funds for a State that was already far undertaxed and underfinanced. As a result, the institutions of the State—higher education, mental health, penal, correctional, and all of the other services calling upon the State general fund—have come into the picture rapidly and have absorbed the increase. That gives us a situation in 1960 where a recent increase in taxes on the State level of nearly 50 percent has already been absorbed for the various State purposes, and little additional revenue will be forthcoming from the present tax structure.

The second factor in the picture is the new school finance program adopted in 1959. One of its basic effects was that it changed the direction of the flow of State funds, granting larger funds to the poorer areas and making lesser grants to the wealthy ones. This means that some of the poorer areas profited from this system as much as a thousand dollars per classroom unit last year. As a result, it was necessary to appropriate $86 million for the first year of the biennium and $103 million for the second year—a total of $189 million for salaries in the biennium. If we are to stand still on our present $103-million level the next biennium, as you can see, would require $206 million rather than $189 million. That alone is an increase of $17 million for teachers' salaries without considering the additional factors of increased enrollment which will demand $10 million more, increased transportation which will require $3 million more, and increased maintenance and operation costs which will require $2 million more. That amounts to $32 million plus whatever else may be required for the increasing of teachers' salaries at the rate of three million each year for each $100 of increase in teachers' salaries.

As a result of these facts, it becomes clear that a mere standstill increase in State funds for the next biennium would be an addition of $32 million more; and that if teachers' salaries are to be increased as they would need to be to attract teachers and if State participation in the financing of schools is to even stand still in percentage, then the legislature of 1961 must take a courageous and long range stand on the basic problem of State responsibility for developing the human resources of our State.

THE FINANCING OF SCHOOLS IN A TAX FIGHT

And before we leave the question of school finance, we should get clear in our thinking the whole problem of local, State, and National taxation for schools. The developments of the last half century have produced an economy in this country which may be characterized by the words bigness and speed. Our industrial corporations have become enormous institutions, with hundreds of plants, warehouses, loading facilities, trucks, ships, airplanes, and other property located in many communities and States. The speed with which the raw materials and output of these plants move across township, county, and State lines poses a problem for taxing units that is so complex that it defies the ability of local and State governmental units to determine equitably their share of the profits of each such corporation. This means that the ancient tax system of the 19th century in which a local community levied and collected taxes for schools, highways, and other public services has become as obsolete as the horse and buggy which characterized that era.

These new economic facts also mean that the owners and controllers of the new giant corporations in many cases live in distant States or communities and have little knowledge or personal interest in the affairs of a given local community. These facts mean also that the taxing unit that can discover and tax an equitable share of these new giants must be a taxing unit that covers a territory large enough to encompass a substantial share of the trade and commercial activities of the taxpayer corporation.

WHAT IS THE ROLE OF CONGRESS?

These economic facts highlight the reason why the managers of our great, new corporations are temptd to continue advocating that taxes for schools should be levied on a local basis, where obviously only the small and the slow taxpayers can be easily found and taxed. It has long been clear to honest students of the subject that the State and the Congress are the only taxing agencies in this Nation that can cope with the new tax problem of 20th century America. It is similarly obvious that even the State cannot reach certain huge sources of wealth and income and provide for equitable taxation, and that only Congress can reach these sources, primarily those derived from interstate commerce, and thus finally achieve equity.

Every major public service other than education has faced collapse when depending upon local community taxation, and each has sought and received financial strength from the tax powers of the Federal Government, be it highways, airports, flood control, harbors, welfare, soil conservation, or many others.

Education is a vital concern of the whole Nation. We cannot live without it. In fact, it has become the very heart of our military defense system. The race against catastrophe will be lost unless we face up as a Nation to the fact that we must find the money and the way to develop the economic resources that reside in our children whether they, or their parents, or even their State want these human resources salvaged and developed.

THE CURRICULUM AS A POLITICAL ISSUE

During the past 10 years, there have been several waves of discussion of the curriculum in the public schools and the colleges. Much of this discussion has arisen from the sincere concern of many people for the proper education of their children. Some of it has arisen from the age-old practice of belittling scholarship and appealing to prejudice against any change that would disturb the status quo or the fond but inaccurate recollections of our childhood. A little of it obviously is pure political chicanery; but whatever the source or the cause, it is the responsibility of the teaching profession to sift the criticisms and suggestions for possible good, and to go an additional mile with those who seek to use the public schools as a sounding board for political attention.

We must not, on this or any other occasion, lose our faith in education itself. If we really believe that education not only ennobles but also has value as a preparation for living and working, then we cannot escape the conclusion that the technical education of a lawyer or doctor or plumber or teacher will produce a superior workman. Whether we are trying to produce any of these—an engineer, a teacher, a superintendent, or a State superintendent, we would betray our faith in education if we should suddenly pretend that for these important tasks no special kind of education or experience is required.

ARE WE SOLVING CHILD PROBLEM?

The work of the public school will never reach the level of quality that sincere critics inside and outside the schools know is demanded in the 20th century until the body of practitioners in the field are permitted by their employers to strike out boldly and without fear in those fields where they believe change should be made. Great educational changes are now in progress throughout this country. These changes are coming about by the age-old process of profiting from errors and learning from careful research and experimentation. A recent survey of urban school systems by the National Education Association, published in May, 1960, reveals the following:

1. Seventy-seven percent of the urban school systems were providing special learning experiences for gifted pupils in the junior and senior high schools.

2. More than 25 percent of the systems were providing for televised instruction.

3. In 12 percent, foreign languages were being taught in the elementary grades by special teachers and in others by regular teachers on a limited basis.

4. In nearly all systems expanded and accelerated reading programs were underway using a variety of methods to attain the obvious variety of reading objectives which are familiar to anyone who has made a study of the subject.

I might say, incidentally, that the study did not reveal any systems that are offering courses in tattooing, bowling, horseback riding, or fly casting, and I might add as a personal observation, there is probably too little attention being paid in schools to the evaluation of political propaganda and the great new world of Madison Avenue techniques and to simple consumer education.

Seriously and basically, the teaching profession must undertake to carry the responsibility of leadership in the direction that research points the way. It must undertake greater responsibility on both State and National levels in improving and refining the recruitment, screening, education, orientation, and policing of the profession and its own membership. I especially direct your attention to the new programs in this area now being launched by the TEPS Commission of NEA.

No highly technical or scholarly program can be developed or properly administered in the rough and tumble of active politics. Our State has not stooped to such a program in the past, and we must continue to stand in a firm and dignified manner for this policy in education.

SUMMARY AND RECOMMENDATIONS

I have tried to touch upon several of our problems and to raise certain questions and implications that have evolved in the past few years in the thinking of our officers, our staff, and our many committee members. I recognize that there is, and should be, great latitude in decisionmaking and in experimentation in the solution of our problems. I know that your hours of discussion in this conference will probe more deeply and produce scores of ideas and proposals that are so much needed for the decisions of the months ahead.

A 10-POINT PROPOSAL FOR THE SIXTIES

For the purposes of summary, however, and as a possible catalytic agent for some of your discussion, I should like to make a 10-point proposal for the decade of the sixties immediately ahead of us. It is not a program to keep up with someone else. It is not a program to patch up and fill the holes in our walls. It is a program that I believe firmly may be a practical design for the decade if we are to live up to what we profess, or in fact, if we are to live at all:

1. Our program must be based upon a philosophy that encompasses our entire national life, necessities, and aspirations.

2. It must be based upon a comprehension that the problem of educating our youth is an integral part of the whole problem of finding, releasing, and developing our human resources, whether these resources are chained or restricted by ignorance or poverty or disease or youth or old age.

WE MUST CONSTRUCT THE CLASSROOMS WE NEED

3. We should set out in the 5-year period immediately ahead of us to construct the classrooms in the United States that are obviously needed: 90,000 in 1960–61, rising to 118,000 in 1964–65; costing $3 billion the first year and $5 billion the fifth year; paid for at the ratio of 1 to 3 of Federal and State-local funds.

In the past several years, we have been engaged in a ridiculous numbers game as to the needs of education. The latest report from the U.S. Office of Education estimates a backlog shortage of classrooms because of obsolescence and exploding enrollments of 140,000 rooms. This figure reveals a campaign on the part of someone to deprecate the need as it was revealed by the most comprehensive study of education ever made in the 1950–55 school facilities survey, financed by a congressional appropriation and conducted by the U.S. Office of Education.

This survey revealed that in 1952 there was a shortage of 312,000 classrooms. In this 7-year period we have abandoned 150,000 classrooms and acquired a need for 258,000 for new enrollments. It appears that we have built 430,000 classrooms, leaving a conservative estimate as of 1960 of a shortage of 284,000 classrooms. Without being technical about the mobility of our population, the changing residences of our pupils, the more than adequate construction in certain areas, and the total inability of other areas to construct, it is obvious that we are making practically no headway in meeting the shortage of classrooms in this country. But at the same time, we have piled up a State-local debt for what we have built of 211 percent over that of 1948, as against a Federal debt rise of 10 percent in dollars and an actual decline in terms of percentage of gross national product of 33 percent.

SEVEN HUNDRED AND FIFTY THOUSAND TEACHERS REQUIRED IN THE 5 YEARS AHEAD

4. We should set out with determination to find the three-quarters million additional teachers that will be required in the 5 years ahead. To do this, we must recognize that the average annual teacher's salary today stands at only 61 percent of the median income of the 17 other professions, which was $7,600 in 1958.

We must recognize that if we are to compete successfully for these personnel for our public schools, the average annual teacher's salary over this 5-year period must rise a minimum of $500 annually, reaching the $7,500 figure by 1964–65. The total cost of this program will be $8 billion the first year and $13 billion the fifth year, paid for likewise at 1-to-3 ratio of Federal and State-local funds.

The attack upon this crucial problem is in fact a four-way attack. Here are the facts:

(a) We shall need 350,000 teachers for the 10 million children now under the instruction of teachers without a college degree.

(b) We shall need 300,000 teachers for the 8 million new children that will enter our schools.

(c) We shall need 200,000 teachers if we are to pull down the pupil-teacher ratio to a figure that will produce a class size in harmony with the demands of good instruction.

(d) We shall need an additional 150,000 to replace those who die, retire, or leave us for other pursuits.

WE MUST REORGANIZE ANTIQUATED SCHOOL GOVERNMENT

5. We must push on courageously to reorganize the antiquated school government in our country into school corporations with a minimum of 1,000 to 1,500 pupils. In this objective we are making headway. In the 10 years just past, the number of school corporations in the United States has declined from 103,000 to 45,000. Here in Indiana, our new reorganization law is achieving real preliminary results. At this very moment, however, the forces of reaction in this reorganization program are organizing and appealing to the prejudices and the petty vested interests of a lot of people. A number of candidates for office have called for the repeal of the act. This is serious, and we must immediately regroup and redouble our efforts to achive what this law promises to be—the greatest advance in effi-

cient, economical school government in the history of our State.

6. We must continue the fight for qualified teachers in the classrooms. Here, too, we have made substantial progress in the last 5 years, particularly in Indiana. Our problem now is not so much to persuade our public of the need for highly qualified teaching personnel. Our problem now and in the sixties may well be the problem of defining and determining for ourselves what constitutes real quality in instruction and how it can be achieved. Real progress is being made through widespread experimentation over the country in new ways of teaching, in sounder grade placement of subject matter itself, and in the redirection of thinking from segmented bodies of knowwledge to the real objective of education concerned with the development of competent, functioning human beings.

It seems at the moment that headway is being made toward integrating the efforts of the warring factions in the teaching profession on some of these subjects. There are hopeful signs also of a significent increase in the willingness of a larger segment of the public to rely upon the judgment of competent members of the profession for leadership and direction of the schools and the curriculum. These are hopeful signs, but they did not come about easily; and they will not be sustained without a vigorous and intelligent effort on the part of everyone.

THE FANTASTIC NEEDS OF HIGHER EDUCATION

7. We must incorporate into our thinking the fantastic needs of higher education. In only a decade or so, college enrollments in this country will double; and still there will be left behind a sizable number of our upper 25 percent who will be unable to go to college. The private colleges have little hope of taking their share of the mounting increase in college enrollment. As a result, the public colleges and universities must be restudied immediately with a view to making college facilities available on a practical and economical basis near the homes of millions of young people that America needs to educate.

We must approach this problem on the State level as to organization of public colleges and universities and financing them. We must likewise approach the problem on the national level if these institutions are to survive and if some quarter million intellectually able students each year are to be salvaged for the economic and social growth that we must have for survival.

8. We must embrace and advocate a realistic tax policy on the local, State, and National levels that recognizes that all three levels of government have a definite and compelling interest and concern as to whether our population is intelligent or illiterate. This involves a recognition by the National Government that the tax powers that are inherent only in Congress must be applied to the great new sources of wealth and income that have grown out of the reach of States and local communities.

9. The ninth objective is an objective of how rather than what. When it is considered that only half of the teaching profession in America is affiliated with its national professional organization and that a sizable percentage in many States is not affiliated with State or local associations, it is not difficult to see the enormous handicap with which the teaching profession is attacking its problems. The solution of these problems requires the energies and support of every teacher in this land; and we should make a resolution that the 700,000 members of NEA shall be a million in 1964 and all of them in 1970. I, for one, am ashamed of Indiana's record in the national professional organization as to membership, and my pride at the local level is only pride in progress, for we still have 10,000 of our teachers not enrolled in local associations. I am very serious about this ninth objective, not as an objective in itself, but as the only means by which we can hope to achieve professional status in the decade ahead.

THE TEACHING PROFESSION MUST MATURE IN CIVIC AND POLITICAL LIFE

10. The members of the teaching profession must mature in the civic and political life of our country. The image of a teacher who has no philosophy or no position about the great matters of public interest, including the education of children, is certainly not an image that can inspire and lead youth toa mature intellectual growth. At the same time, the teaching profession must continue to grow to a position where public confidence in its leadership in education becomes firm and effective.

Our friends in the State and National chambers of commerce have recently announced a large-scale series of clinics throughout the State and Nation to inform their members on the issues and the recommended solutions. We likewise must live up to our responsibilities in political life if we expect public faith in our leadership to emerge and remain strong.

What I have said about the schools and the teaching profession is what I believe deeply must materialize if the schools are to meet their responsibility and the teachers are to justify the confidence of our people. I know that there are many practical problems and sometimes unpleasant tasks to be performed if we are to bring our thinking and our experience to bear; but I also believe so very strongly that all of your work in professional organizations, in your local communities, in your elections, and in your discussions with the public will fail to materialize into positive and dynamic results unless these activities are geared to a central philosophy as to the role of the profession and the schools.

AMERICA MUST DEVELOP OUR HUMAN RESOURCES

America simply cannot stand up, either in comparative strength in the world or as an example of the best way of life in the eyes of emerging millions in underdeveloped countries of the world, unless the moral and intellectual forces of this country rise to the surface and evolve a national policy for the research and development of our vast human resources.

To say that we cannot afford such a program is to say that we do not have faith in an investment in people. It is equivalent to saying that we do not believe that the free enterprise system can integrate all the brains and abilities of our people and set them in motion toward a better way of life.

Ukrainian Congress Committee of America—A Tribute on Its 20th Anniversary

EXTENSION OF REMARKS
OF
HON. JAMES A. BURKE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 31, 1960

Mr. BURKE of Massachusetts. Mr. Speaker, this year we commemorate the 20th anniversary of the Ukrainian Congress Committee of America. It is fitting that we salute the leaders of this organization from the floor of Congress, for their service to Ukrainians and to the United States has been very valuable.

One of the great problems facing new Americans is the difficulty of adjusting to a completely new national environment. The Ukrainian Congress Committee has played an important role in helping our new Ukrainian citizens adjust to their new country. It has served as something of a bridge between the old country and the new, the old way of life and the new. In so doing, it has kept alive some of the finest traditions of the Ukrainian people which have found their place solidly in our American civilization. However, the greatest contribution of this organization has been to keep alive in Americans their dedication to freedom everywhere by their insistence upon freedom for the Ukraine.

Ukrainians everywhere, America salutes you.

Twentieth Anniversary of Ukrainian Congress Committee of America

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, August 31, 1960

Mr. CASE of New Jersey. Mr. President, there are some 2½ million Americans of Ukrainian ancestry in this country. This fall the Ukrainian Congress Committee of America is marking the 20th anniversary of its founding.

I ask unanimous consent to have printed in the Appendix of the RECORD the text of a letter I have written on this occasion to Prof. Lev E. Dobriansky, who, for more than a decade, has led the Ukrainian Congress Committee.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AUGUST 31, 1960.

Prof. LEV E. DOBRIANSKY,
Chairman, Ukrainian Congress Committee of America, Inc., Georgetown University, Washington, D.C.

DEAR PROFESSOR DOBRIANSKY: On the occasion of the 20th anniversary of the founding of the Ukrainian Congress Committee of America this fall, I want to express to you the sorrow and anguish I feel, in common with the members of your committee, at the continuing plight of the Ukraine under Russian Communist domination. The committee which you have led for more than a decade has helped to insure that all Americans remember our stake in the aspirations of other peoples for freedom and respect for the dignity of man.

It may be that the Iron Curtain is now more perforated than it was in the era of Joseph Stalin and that the repressive policy of the Soviet Union toward its national minorities is somewhat lessened. But the fact remains that the Soviet Union is a ruthless totalitarian state which has not changed its nature or policies in any essential respect.

As one who joined in sponsoring the Senate resolution last year to establish Captive Nations Week, I would like to note again your tireless efforts and devoted service on behalf of its successful establishment and annual observance. Freedom-loving Americans, whatever their national backgrounds, are indebted to you and to all those who

serve with you in the cause of human freedom.

Sincerely,

CLIFFORD P. CASE,
U.S. Senator.

The Status of Public and Private Debts, 1952 to 1959

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 30, 1960

Mr. McCORMACK. Mr. Speaker, sometime ago I requested the Library of Congress to prepare for me a statement showing the status of public and private debts by years 1952–59.

I wanted to know the status for the Federal Government, the State governments, and the local governments—county, city, township, school district, special district, and also private debts by corporations, individuals, farm, and nonfarm.

I have recently received a statement from the Library of Congress which, under leave to extend my remarks, I am placing in the RECORD. This statement—all figures in millions—shows that the Federal debt has increased from $259,105 in 1952 to $284,706 in 1959 or about 10 percent. Actually, the public debt as of the present time is about $289,000.

The State governments' debt has increased from $6,874 to $17,102 or about 149 percent.

The local governments' indebtedness rose from $23,226 to $45,235 or about 95 percent.

The total public debt, therefore, has increased from $289,205 to $347,043 or about 20 percent.

In the meantime the total private debt has increased from $337,100 to $601,700 or about 78 percent and is broken down as follows:

Corporation, $201,600 to $335,800 or about 67 percent.

Farm, $15,200 to $23,700 or about 56 percent.

Nonfarm, $120,400 to $242,100 or about 101 percent.

The grand total of public and private indebtedness has increased from $626,305 to $948,743 or about 51 percent during this 8-year period.

I have noted also from a speech which Budget Director Stans made to the New Jersey State Chamber of Commerce on June 20, 1960, that:

> Now the $290 billion of public debt, plus over $350 billion of future obligations for past services, plus nearly $100 billion of c.o.d.'s adds to the almost unbelievable total of nearly $750 billion.

Mr. Stans also states that:

> We should realize that when you look only at the budget for one fiscal year at a time, you see merely the visible part of the iceberg; the dangerous part is below the surface.

I am making this information available to the public at this time in order that they may have a more complete look at the fiscal picture than is revealed in a statement that the budget for a particular fiscal year shows a surplus of $1.1 billion or some relatively small amount.

The statement from the Library of Congress follows:

Gross public and private debt, 1952–59

[In millions]

	1952	1953	1954	1955	1956	1957	1958	1959

NOTE.—Debt of the Federal, State, and local governments are for the end of the governmental fiscal year. For the Federal Government; most school districts, and all except 4 of the States the fiscal year ends on June 30. With respect to other governments a considerable proportion end their fiscal years on Dec. 31. Private debt is for the end of each calendar year.

[1] Not reported for these years.
[2] Less than $500,000.
[3] Breakdown is not yet available. Total figure given is for June 30, 1959.

Plight of the Shears and Scissors Industry

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Wednesday, August 31, 1960

Mr. BUSH. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a summary of information presented to the Tariff Commission and others regarding the plight of the shears and scissors industry.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SUMMARY OF INFORMATION PRESENTED TO THE U.S. TARIFF COMMISSION AND THE COMMITTEE FOR RECIPROCITY INFORMATION BY THE SHEARS, SCISSORS & MANICURE IMPLEMENT MANUFACTURERS ASSOCIATION

The Shears, Scissors & Manicure Implement Manufacturers Association has filed a written brief and presented oral testimony to the Tariff Commission and the Committee for Reciprocity Information opposing any reduction, during the GATT negotiations at Geneva, Switzerland, in the present rates of import duties on scissors and shears provided for in paragraphs 357 and 1531 of the Tariff Act of 1930 as amended.

Further reduction in the rates of import duties on scissors and shears are opposed for the following reasons:

1. The domestic scissors and shears industry is truly a small business as there are only two domestic firms which employ 250 or more production workers, and none with more than 500 production workers.

2. There are only 20 firms manufacturing scissors and shears in the United States. This is less than one-half of the number manufacturing scissors and shears before the import duty reductions made during 1950 and 1951.

3. Approximately one-half of the firms still manufacturing scissors and shears have less than 10 employees each.

4. The rates of duties on scissors and shears valued at more than 50 cents per dozen provided for in paragraph 357 of the Tariff Act of 1930 were reduced 50 percent during 1950 and 1951.

5. The rate of import duty on scissors and shears in fitted cases provided for in paragraph 1531 has been reduced 60 percent since the Tariff Act of 1930 was enacted.

6. Scissors and shears are an ideal import item because (a) they are light in weight; (b) they are cheap to ship from abroad; (c) they are not fragile; (d) they will not deteriorate; (e) they will not go out of style; and (f) the foreign cost of production is substantially less than the domestic cost of production.

7. During 1951 the quantity and value of imports of scissors and shears valued at more than 50 cents per dozen were greater than during the entire 10 prewar years of 1931-40.

8. Imports of scissors and shears valued at more than 50 cents per dozen during 1959 had a foreign value of $3,059,673 which is more than 49 times the average annual value during the 10 prewar years.

9. The quantity of scissors and shears valued at more than 50 cents per dozen imported during 1959 was 8,204,568 pairs which is more than 50 times the average annual quantity imported during the 10 prewar years.

10. Imports of scissors and shears valued at more than 50 cents per dozen increased 21 percent from 1958 to 1959.

11. Imports of scissors and shears valued at more than 50 cents per dozen during the first 5 months of 1960 were 22 percent higher than during the first 5 months of 1959.

12. Foreign manufacturers, since the end of World War II, have cut their prices on scissors and shears so that the average value of an imported pair during 1959 was less than half of the value of a pair imported during 1946.

13. The major sources of imported scissors and shears are West Germany, Italy, and Japan. Hourly wages paid to employees in the scissors and shears industry in these countries are from one-tenth to one-third the hourly wages paid in the United States for similar work. In the United States, the labor cost of producing a pair of quality scissors or shears is about 75 percent of the total cost.

14. Domestic manufacturers are unable to sell scissors and shears in foreign markets due to low prices of scissors and shears produced in West Germany, Italy, and Japan.

15. Imports of scissors and shears valued at more than $1.75 per dozen during 1959 were equal to 95 percent of domestic manufacturers' shipments of similar scissors and shears.

16. The value of shipments of domestically manufactured scissors and shears declined from $19,526,000 in 1948 to $11,058,000 in 1958, a decrease of over 40 percent.

17. Some domestic manufacturers are presently operating at a loss.

18. Many employees in the domestic scissors and shears industry are trained only for this type of work and have been unable to find new work in other industries.

19. Scissors and shears are essential items for use during national emergencies. Certain types are included on the "List of Items Essential for Survival" issued during February 1958 by the Office of Defense Mobilization.

20. The domestic scissors and shears industry has the employees, equipment, and know-how to produce surgical scissors and bandage scissors in case of a national emergency.

For the reasons summarized above domestic manufacturers of scissors and shears have requested that scissors and shears classified under paragraphs 357 and 1531 of the Tariff Act of 1930, as amended, be removed from the list of products to be considered for possible U.S. concessions during the coming negotiations under the Trade Agreement Act of 1934, as amended and extended.

Each pair of scissors or shears imported means one less pair will be manufactured by U.S. workmen in U.S. plants, financed with private capital and paying taxes to the U.S. Government.

Questions Answered by New York Port Authority

EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 31, 1960

Mr. BECKER. Mr. Speaker, during debate on August 23, 1960, I posed two specific questions on the floor of the House in reference to the actions of the New York Port Authority. I have received a letter from the executive director of the port authority commenting on the questions I asked.

In the interest of fairness, I am inserting this letter in the RECORD:

THE PORT OF NEW YORK AUTHORITY,
New York, N.Y., August 25, 1960.

Hon. FRANK J. BECKER,
Member of Congress,
House Office Building,
Washington, D.C.

MY DEAR CONGRESSMAN: I appreciate your inquiry regarding a statement made by Congressman CELLER with reference to port authority insurance brokerage practices in the debate on August 23, 1960, on the proposed citation for contempt of Congress of our chairman, secretary, and myself.

Congressman CELLER said:

"We have been denied access to the port authority's books and records, but are gathering a great deal of material from indirect sources though with the greatest difficulty. There are allegations of grave error in the awarding of contracts. There are allegations that one concern has a monopoly on the insurance brokerage business of the port authority. There are allegations that one concern has a virtual monopoly on handling airtrip insurance at various of the airports operated by the port authority." (CONGRESSIONAL RECORD, p. 16074.)

I simply cannot understand how Congressman CELLER could have believed that there was any difficulty in obtaining information regarding "allegations that one concern has a monopoly on the insurance brokerage business of the port authority."

In the first place, I testified as long ago as May 14, 1952, that we have one insurance broker in response to questioning by Congressman CELLER in his first inquiry into the port authority in congressional hearings on House Joint Resolution 375. The record shows that the following colloquy took place, the chairman referred to being Congressman CELLER:

"The CHAIRMAN. In your insurance do you ask for bids?

"Mr. TOBIN. No, there are no bids that I know of in the insurance field. We have one insurance broker that has been the insurance brokering agent for the port authority for 20 years.

"The CHAIRMAN. In other words, he has all the insurance for the port authority?

"Mr. TOBIN. He handles the entire program.

"The CHAIRMAN. Is he an employee——

"Mr. TOBIN. No.

"Mr. KEATING. He is not a commissioner, is he?

"Mr. TOBIN. He is not a commissioner, no, sir."

In the second place, on June 29, 1960, on the return of the subpena in question, I offered to testify orally and answer any question which the committee members might wish to ask concerning the work of the port authority. This offer to testify was completely ignored.

Finally, the fact that the port authority uses one insurance broker appears clearly in the official minutes of the port authority which were furnished in response to the subcommittee's subpena but which were not examined by the committee or its staff before we were held in default for failing to produce all of the file materials which were subpenaed.

The insistence upon the production of file materials which the Governors of New York and New Jersey had ordered withheld cannot, therefore, be justified in this case, nor in any other case, by a need to verify allegations made to the committee or its chairman.

Furthermore, I cannot accept the inference that there is something censurable in the practice of employing one broker. As you know from your work in the insurance business, there cannot be any bidding on brokerage commissions on insurance. The commissions are paid by the insurance companies, not by the insureds. The amounts are completely outside the control of the insureds. The premium charged a public agency cannot be lowered as a result of competition between brokers for servicing the insurance.

In the case of the port authority, the insurance broker's services are far from routine. He must stand ready to provide integrated service in those areas in which the port authority self-insures as well as those in which the port authority purchases insurance. The broker must be staffed and prepared to engage in a far more costly servicing function than is customarily the case. Such staff services must include fire insurance inspection and engineering, rate analysis and valuation of property, safety engineering and related loss prevention activities. Also required is a thorough knowledge of all possible sources of domestic insurance and, when these are saturated with port authority coverage, a further knowledge of British and continental sources for additional insurance to complete the necessary coverage.

Continuity through a single broker is obviously the best way of making sure that these services will be available to the port authority.

There is an analogy which should be within the personal experience of Congressman CELLER and other Members of Congress who are attorneys. A responsible business or governmental organization will not ask for bids between possible attorney to provide legal counseling. Moreover, the use of a single attorney or firm of attorneys on a continuing basis is considered sound practice in order to achieve the continuity of association with the problems of the client which would be sacrificed by an attempt to place this service in the same category as, for example, construction contracts on which bids may be received and compared.

It remains to comment upon the reference to allegations that one concern has a virtual monopoly on handling air-trip insurance at various of the port authority airports. In the first place, this simply is not so. There is competition in the writing of air-trip insurance at all port authority airports. In the second place, as I would have told the committee if they had accepted my offer to answer any questions they might wish to ask on June 29, the port authority expressly rejected the offer of a particular group to double the port authority's percentage rental charge for this concession if it could receive a monopoly. I might note that exclusive concessions in this field are quite common in American airports throughout the country.

I appreciate this opportunity to set the record straight.

Very truly yours,

AUSTIN J. TOBIN,
Executive Director.

Nineteen Sixties—Testing Period for Freemen

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, August 31, 1960

Mr. WILEY. Mr. President, in a world in which peace is threatened by tortuous, deceptive tactics of alternating handshaking and missile bristling of the Communists; new nations are emerging with a volcanic spirit, aimed at independence and self-determination; the national interests of nations on both sides of the Iron and Bamboo Curtains sometimes conflict; in the face of these factors, we, as a nation and individuals, need a stable and fundamental outlook and philosophy.

Recently, the La Crosse Tribune published a timely editorial entitled "Time To Summon Courage, Face It; It's a Testing Period for Freemen."

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the La Crosse Sunday Tribune, Aug. 28, 1960]

TIME TO SUMMON COURAGE, FACE IT; IT'S A TESTING PERIOD FOR FREEMEN

Since the close of World War II it has been the great hope of the world's peoples that a true and lasting peace be found. After a decade and a half, however, this prospect seems further from fulfillment than ever.

This fact unquestionably is a source of deep disappointment, disillusionment, and frustration to many, many millions.

It leads some inevitably to feel that there must be something wrong with our approach to the Russian and Chinese Communists, that if we can just find the right formula we can wash away all difficulties and have the peace we all yearn for.

Yet there is a mountain of evidence to indicate that the only kind of peace the Communists would accept is one which would compel our surrender to their tyrannies.

A very reasonable argument can therefore be made that the present real alternative to war is not a blissful peace but exactly the kind of tension-filled, crises-ridden existence we endure today.

This is an outlook few of us care to contemplate. Nevertheless, our survival as free men depends on our ability to continue to bear, perhaps indefinitely, the tensions and crises of this age.

A recent writer talked of maturity in an individual as a condition demonstrated most forcefully by his ability to bear tensions in his life. It might well be said that America's maturity as a country should be gaged in the same way.

Resistance to this notion cannot be expected to yield easily. Oddly, a good many of our intellectuals, who ought above all to understand today's painful alternatives, are among those most readily persuaded that some magic peace formula lies just around the corner.

Intellectuals often are wedded to the idea of the perfectibility of man. They abhor the prevailing international disorder. But they, like all of us, may be slowly driven to accept the fact that mankind, always falli-

ble, is today in one of its most imperfect moods.

Facing this uncomfortable reality, we do not have to grin but we do have to bear it. This is one of the great testing times in all history for freemen.

Summary of One-Check-Payroll Services

SPEECH
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 22, 1960

Mr. BROYHILL. Mr. Speaker, I should like to call the attention of my colleagues to a recent bulletin issued by the American Bankers Association, entitled "Summary of One-Check-Payroll Services." The question of one-check-payroll system has been considered from time to time by various agencies of the Federal Government, but up to this point, it has only been applied in limited fields. However, without prejudicing the issue, I am impressed by the conclusion given in this summary that "one-check-payroll services appear destined to be a major step toward serving individuals and businesses more fully." With this in mind, I would suggest that it might be well for the next Congress to examine this question more fully, since the pace of growth of National Government payrolls matches that of private business. The complete text of the bulletin is as follows:

SUMMARY OF ONE-CHECK-PAYROLL SERVICES

WHAT ARE "ONE-CHECK-PAYROLL SERVICES?"

One-check-payroll services are convenient arrangements whereby pay is automatically credited to respective employees' bank accounts on or before the normal payday by mutual consent of employees, employer, and banker.

The employer may send one check to the bank accompanied by a list of employees who are eligible or who may choose the plan. The bank credits respective accounts, and employees are fully informed on all details of the transaction, including gross pay, deductions, and net pay. One-check-payroll services are flexible. Several variations of these basic ideas have been used.

WHAT ARE THEIR ADVANTAGES?

For employees, one-check-payroll services:

1. Provide convenience for depositing pay without filling in a deposit slip or leaving their place of employment.

2. Provide assurance of a safe, accurate, and timely deposit of pay.

For employers, one-check-payroll services:

1. Reduce normal payroll processing costs.

2. Save time typically used to distribute or mail individual payments.

3. Reduce or eliminate payroll deduction expenses.

4. Facilitate excellent employee relations, because they are desirable services for employees.

5. Reduce or avoid risks associated with conventional payroll procedures.

For banks, one-check-payroll services:

1. Are an efficient way to credit pay to employee checking accounts.

2. Are an effective way to obtain business—to serve more people with checking accounts and other services which may result therefrom.

3. Are compatible with automation in check handling and bookkeeping.

One-check-payroll services can be an excellent supplement to on-the-job services. Both enable employees to obtain convenient services at a low cost, enable employers to operate efficiently, and enable banks to serve more people better and at a reasonable profit.

WHAT ARE THEIR PITFALLS?

As with on-the-job services, there are pitfalls:

1. Some employees still desire direct cash payment. Their initial response to one-check-payroll services may be one of apprehension. Widespread acceptance may require education on the advantages of this service. Such is the nature of progress. Some banks and employers have started with salaried employees.

2. The most significant advantages may be long run. Patience is required. Progress may not be immediately conspicuous. Collateral benefits may not be easily measured.

3. Establishing one-check-payroll services requires sales initiative.

ARE THEY WORTHWHILE?

Although variations of one-check-payroll services have been used for some time, their value to banks, employers, and employees takes on greater significance as competition intensifies, automation advances, and employees' pay levels rise. One-check-payroll services appear destined to be a major step toward serving individuals and businesses more fully.

Resolutions by Merchant Marine Committee, Department of New York American Legion

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Wednesday, August 31, 1960

Mr. MAGNUSON. Mr. President, the American Legion and many of its departments have always been among the foremost champions of the American merchant marine. Resolutions to this effect, adopted at Buffalo, N.Y., on August 25, by the Merchant Marine Committee, Department of New York, American Legion, reflect a thorough awareness of the value of American shipping to our country's commerce and defense, as well as of the problems facing this most strategic maritime industry.

With the hope that Senators will give deserved attention to the matters involved, I ask unanimous consent that the merchant marine resolutions of the Department of New York, American Legion, be printed in the Appendix of the RECORD.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

MERCHANT MARINE COMMITTEE, DEPARTMENT OF NEW YORK, AMERICAN LEGION—MERCHANT MARINE RESOLUTION

Whereas the majority of our war-built merchant vessels now are low-speed, inefficient, and overage, which impairs the required capacity to promptly meet the military sea lifts for mass troop and material transportation to wherever they may be needed througout the world; and

Whereas there is urgent need for an orderly merchant ship replacement program to correct this seapower deficiency: Now, therefore, be it

Resolved, That the Congress of the United States be urged to:

1. Implement as fully as possible the sound national maritime policy established in the Merchant Marine Act of 1936.

2. Assure the appropriation of adequate funds to enable the Government to meet its obligations and proceed in an accelerated vessel replacement program.

3. Effectively administer the 50–50 law, requiring that a minimum of 50 percent of cargoes financed by the U.S. Government be transported in American-flag ships to the extent they are available.

4. Encourage the Department of Defense, exporters, importers, and tourists to use the dependable and reliable services of American-flag ships, in the interest of a dynamic and expanding U.S. foreign commerce and for national defense.

5. Insure immediately available for national defense, strong intercoastal and coastwise steamship services; and expand and improve the port and alternate route facilities for use in case of attack.

6. Increase the efforts of the Government to work with other nations toward eliminating discriminatory practice harmful to U.S.-flag shipping.

7. Commend the American maritime industry and the U.S. Maritime Administration for their research programs on ship design, ship propulsion, and for more efficient cargo handling, so that the most up-to date information will be available to various segments of the American merchant fleet to insure its leadership among the world's maritime nations.

8. Provide adequate shipbuilding and ship repair mobilization bases for wartime requirements along all sea coasts, and that Government and military officials allocate and distribute peacetime new ship construction and repairs equitably among the Atlantic, Gulf, Great Lakes, and Pacific facilities in the interest of national security.

9. Continue to encourage and support the U.S. Merchant Marine Academy and the Maritime Colleges in Maine, Massachusetts, California, and New York.

10. Continue a program of direct action for a strong American merchant marine.

11. Implement a broad and extensive information and education campaign by the American Legion on behalf of a strong American merchant marine for our national security.

12. Provide that the chairman of the Merchant Marine Committee and the director of the National Security Committee of the American Legion be, and they hereby are, directed to continue to seek and obtain from all possible sources such information and assistance as will insure the effectiveness of the mandates of this convention concerning the American merchant marine, and further that the chairman and director be, and they hereby are, authorized to participate in all public hearings affecting the said program; and be it further

Resolved, That the American Legion instruct the National Headquarters of the American Legion to continue to prepare and to carry out an extensive information and education program about the American merchant marine as the "fourth arm" of national security.

EDWARD C. HOLDEN, Jr.,
Chairman, Department Merchant Marine Committee.
BUFFALO, N.Y., *August 25, 1960.*

Six Outstanding Conservatives

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 31, 1960

Mr. CURTIS of Missouri. Mr. Speaker, there appeared in the New York

Times magazine an article entitled "A Conservative Sets Out His Credo" by BARRY M. GOLDWATER. In this article he names six outstanding conservatives and sets forth his reasons for listing them. I desire to include this portion of the article from the New York Times magazine of July 31, 1960, which lists the six outstanding conservatives named by Senator GOLDWATER with his reasons:

SIX OUTSTANDING CONSERVATIVES NAMED BY GOLDWATER, WITH HIS REASONS

Roosevelt: This man displayed his conservative bent by recognizing the lessons of history which showed that the proper use of power could preserve peace in the world.

Hoover: This conservative President showed to the world the intense interest of the conservative in the problems of his fellow men. His whole life has been a dedication to the solution of these problems.

BYRD: Senator BYRD, being a true conservative, recognizes the obvious lessons of history which tell us that no individual, business, or government can forever spend money that is not at hand.

WILLIAMS: I could include Senator WILLIAMS for the same reasons I have discussed in Senator BYRD's case, but, in addition, Senator WILLIAMS recognizes that history has taught us that dishonesty in government creates contempt for the government. And he has devoted a great part of his career to ferreting out dishonesty where it exists.

Kirk: Professor Kirk's writings are probably the clearest ever done on the conservative philosophy and I list him because a reading of his works will give a person an immediate understanding of what conservatism means.

ALGER: I have selected Congressman ALGER because he typifies a new and young group of conservative politicians who know that we must study the past if we are to make progress in the future. That is the one point on which all conservatives agree. That is why none of them wants to try the mistakes of yesterday in the solving of the problems of tomorrow.

Drugs for Korea

EXTENSION OF REMARKS

OF

HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, August 31, 1960

Mr. CASE of New Jersey. Mr. President, the activities of numerous Americans, from every area of our country, are helping to bring new hope to countless millions of people in scores of developing nations. If we could know of these activities by our own neighbors, and the difference they are making in the lives of other people, our country's overall efforts in this field would acquire a new and personal meaning to us.

The Foreign Policy Committee of the League of Women Voters of Englewood, N.J., has endeavored to do just this in a series of 15 weekly illustrated articles published this year by the Bergen Evening Record. The foreign policy chairman, Mrs. Florence Thomases, conceived the idea of a series of articles highlighting the oversea experiences of people from Bergen County who have served in international development work. At my request, the International Cooperation Administration supplied a list of such persons from the Bergen County area, which was one of the sources used by the committee in developing its material. Mrs. Adele H. Stern, public relations chairman, wrote the articles.

This series, entitled "Bergen International," seems to me to be a signal accomplishment in awakening the interest of Americans in how their neighbors and their communities are helping in the effort to raise living standards and to improve health and education all over the world. The stories show, for example, how Bergen County people have helped university education in India; have helped Icelanders use their native volcanic ash in building lower cost housing; have helped schools and teacher training in Chile; have helped solve nutritional problems in the Philippines; how pills from an Englewood plant stopped the tubercular coughing of a little girl in Korea. They link such activities to the larger programs by American private agencies and foundations, the mutual security program and the work of United Nations agencies.

I ask unanimous consent, to have printed in the Appendix of the RECORD one of the articles from this series. I believe it illustrates well how our country's work in this field can be brought close to home to any American community.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BERGEN INTERNATIONAL—DRUGS FOR KOREA

(By Adele H. Stern)

A small child has been coughing. Nobody takes notice. Her once bright, black eyes are dulled, and she listlessly leans her frail body against a tree in front of her parents' crude home. Another spasm shakes her outrageously. Still nobody pays any particular attention. For this is a child in postwar Korea, and she is only one victim of uncounted sufferers of the disease of tuberculosis.

Then one day something happens. A man from the World Health Organization comes to the town. The gossips say that he is distributing pills which will help the coughing. And for those who are not infected, there will be vaccinations to prevent them from becoming ill. The child is given a pill and another and another, and one day the coughing lessens and stops. And the child can run again and play.

What is this pill that gives hope to tuberculosis victims in Korea, and where does it come from?

A drug company in New Jersey called Panray Corp. manufactured the pills. They had been requisitioned through the U.S. International Co-operation Administration and shipped from the Panray plant in Englewood. The pills may be either Parasal (aminosalicilic acid) or Isoniazid (isonicotinic acid hydrazide) whch, with streptomycin, make up the three durgs which are commonly used to treat tuberculosis. Since the outbreak of hostilities in 1950, with the accompanying disruption of population, lack of proper food, and lowering of health standards, tuberculosis has been on the increase in Korea.

And it is only since 1953 that the program for controlling it has been stepped up. Panray has increased its shipments of the drugs enormously from the 25,000 to 50,000 bottles which were sent at a time in 1956 to as many as 300,000 bottles in a single shipment in 1959. So critical was the need at one point that 20 percent of one shipment of the drug, which normally travels overland to the central assembly base at Sharpe, Calif., and then on vessels to Korea, was airlifted to Sharpe by the Flying Tigers and then flown to Seoul by the Army Transportation Corps.

And so the next 10 years should see a sharp reduction in the disease in Korea. While tuberculosis is not curable, it may be arrested, and the aim is to rehabilitate patients so that they may function again as healthy people.

The next 10 years should bring, as well, many other hopeful things for our little coughing girl, Yung Ok. The war-beaten earth of her homeland is being reclaimed and irrigated with the help of U.S. technicians who also are teaching farmers the better use of pesticides and fertilizer. Already the rice yield, the staple crop in this densely populated land of 22½ million, has increased substantially. Existing cotton mills, which were damaged during hostilities, have been rehabilitated with ICA assistance. And more than 1 million bales of U.S. surplus cotton has been disposed of to aid the all but destroyed textile industry.

Splendid Americans, such as Philadelphia lawyer Graham French, have given sums of money to build towns in which refugees can live and work and rehabilitate themselves. Such a town is New Chorwon, where, through French's gift of no more than $10,000, some 500 people can make a living from crops of potatoes, wheat, cabbage, and barley. In the raw, Korean winter, these people, former refugees from the north, make straw rope with the use of a rope machine, another gift from French.

ICA has initiated technical assistance for do-it-yourself housing. After learning how to use indigenous materials which permit the reduction of imported building materials by 60 percent, unemployed laborers working with zest have built in Korea some urban housing which is impressive. Moreover, the Koreans have learned how to solve their own housing problems, so that now the United States can step out of the picture in this area of endeavor.

At the Hae Myung Orphanage outside Seoul, seven American soldiers assisted in the building of two wooden washing machines, which the orphans now use to help support the orphanage. From a news story about a build-it-yourself washing machine developed by the ICA the seven GIs figured out the blueprints, added some innovations of their own, came up with a better machine, and cut the cost to $4.

The fishing industry took a new lease on life with the use of mechanical equipment provided by the ICA. Where previously it had been necessary for 7 boats to be operated by 80 men, with the new power gear it was found that 26 men operating 2 boats—1 boat to catch the fish and 1 boat to carry the catch back to shore—could land twice the precious catch in half the time. Crew members replaced by the mechanical equipment have gone to work ashore to salt, pickle, dry, freeze, market, and distribute the increased fish harvest to areas where seafood has never been consumed before, and orders have been placed for 16 more power blocks to mechanize further the Korean fishing fleets.

Little Yung Ok, returned to health, will eat better food; live in a better house, and will be clothed more warmly. With these advantages and the while pills from Englewood, N.J., her children and grandchildren can have the opportunity to grow strong and comfortable.

The Republic of Korea, devastated by the fighting of 1950–53, has made remarkable progress in rehabilitating its economy. The majority of the war damage has been repaired and agricultural and industrial development has progressed well beyond the pre-1950 stage.

The U.S. mutual security program has been the principal source of assistance. From 1954 to 1959 obligations for direct U.S. economic aid to Korea totaled billions of dollars.

The fiscal year of 1959 witnessed continued close United States-Korean cooperation in handling new and changing problems. Nevertheless, while its administrative and technical proficiency is improving steadily, Korea is not yet adequately prepared to meet the needs of an efficient, modern state.

But, Yung Ok, there is progress and there is hope.

An Alarming Paradox

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Wednesday, August 31, 1960

Mr. MAGNUSON. Mr. President, I ask unanimous consent that an editorial from the June 1960 issue of Marine Engineering Log, capitioned "An Alarming Paradox" be printed in the Appendix of the RECORD. It traces the disastrous decline in carriage by American shipping of our country's foreign trade, from a high of 67.6 percent in 1946, to a threadbare 10.6 percentage for 1959. There is little consolation in the figures cited, but I hope that they may at least be a warning to the Congress and the administration that continued neglect of this most strategic maritime industry will have catastrophic consequences, both to our commerce and to the national defense.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN ALARMING PARADOX

While it may come as a shock to many distressed individuals and entire segments of our maritime industry, the year 1959 will be recorded as the greatest year of world trade. The total value of goods moved in global trade last year exceeded the whopping $100 billion tallied in 1957.

This fact was made known recently by Secretary of Commerce Frederick H. Mueller. While his statement provided no idea as to the margin by which the 1957 total was exceeded, it is presumed that his preliminary figures are not compiled on any haphazard "guesstimates."

UNITED STATES IS LEADING TRADE NATION

At the same time we learned that the U.S. total trade (imports plus exports) accounted for $31.5 billion of this huge $100-billion-plus trade melon. Our imports rose to a new—and somewhat alarming—high of $15.2 billion. Our exports amounted to a disappointing $16.3 billion—providing the narrowest trade surplus we've had since 1950.

(In 1957, our biggest trade year, our total trade amounted to $32.5 billion. In that year we imported $12.9 billion while exporting the unparalleled amount of $19.4 billion. Thus, in 1957, we had a trade surplus of $6.5 billion as against last year's $1.1 billion. Happily, our exports for the first quarter of 1960 have been at an annual rate of $18.4 billion while imports have been running at a rate of $15.7 billion.)

Obviously, Secretary Mueller's pronouncement that 1959 was the greatest trade year ever known provides little comfort to many who earn their livelihood in the U.S. maritime industries. And the fact that the United States again accounted for the dominant share of the world's trade must be particularly ironic to the bankrupt tramp operator, the distressed directors of many of our berth lines, and the worried executives of our shipbuilding and repair yards.

Now, the U.S. maritime industry has no corner on rough times. Every maritime nation in the world has felt to some degree the so-called shipping recession of the past few years. But American steamship lines and shipyards with their attendant high operating and construction costs are less able to ride out an economic blow.

There are many factors that adversely affect the American shipping company and shipyards. And high costs are a formidable disadvantage. Yet the paramount factor is the lack of support shown by American industry for U.S.-flag shipping.

A SORRY RECORD

In 1946, excluding waterborne trade with Canada, American ships carried 67.6 percent of this Nation's waterborne trade. In 1948, 54.8 percent was carried. In 1950 the percentage was 44.6; 1952, 35.8; and 1954, 27.8.

By 1956 only 20.4 percent was shipped American. In 1957 it declined to 17.6 and then dropped to 12.8 percent in 1958. And the final tally for 1959 shows that only 10.6 percent of our foreign waterborne commerce was hauled by our ships. This is a sad record for the world's most dominant trading nation. Mr. K's boast that he was going to bury us in a war of trade doesn't seem so boastful now. After all, if things get any worse for our shipping, if our shipping sinks any lower, we won't have the principal tool with which to wage a war of trade.

Pakistan Perspective

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 31, 1960

Mr. THURMOND. Mr. President, Washington will be the poorer next month when Pakistani Major General M. Hayaud Din, head of his country's military mission to the United States for the past 5 years, returns to Pakistan. As a military "ambassador" to the United States, Gen. Hayaud Din has won many friends for Pakistan. I, for one, knew little of his people and their newly created nation when I first met him almost 5 years ago. Today, though still far from expert on Pakistan, I have learned much about this country on the other side of the world, most of which has impressed me greatly. For example:

Pakistan, with 80 million citizens, is the seventh most populated country in the world.

Pakistan soldiers, the Moslems of Great Britain's Indian Empire, fought with the soldiers of the United States in both World Wars of this century and are presently allies with us in the Southeast Asia Treaty Organization and the Central Treaty Organization.

The Communist Party is outlawed in Pakistan, and the Pakistani Government has been openly pro-free world since its creation in 1947.

Pakistan appears to be opposed to the "something for nothing" policy adhered to by many governments in the world today in dealing with its citizens. Private enterprise is encouraged to its fullest.

In lunching with Gen. Hayaud Din on Friday, I was given an interesting briefing on the current situation in Pakistan. President Mohammed Ayub Khan is committed to forming a democratic form of government which is suitable for the background of his people. His ideas show a sincere concern for his people and are spelled out simply, but with singular comments, in the July issue of Foreign Affairs. In mentioning the bloodless revolution of 1958 which saw him take over the reins of the Pakistan Government, he says:

When circumstances such as our revolution concentrate power in the hands of one person, it is his bounden duty to pass that power on to a more broadly based system without avoidable delay. Individuals are fallible; but institutions stay. That is why I am in such a hurry to insure the induction of a suitable constitutional system without any loss of time.

For the benefit of those persons not familiar with the situation in Pakistan, in many respects our stanchest ally in the Mideast and southeast Asia, I ask unanimous consent that President Ayub Khan's article, entitled "Pakistan Perspective," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PAKISTAN PERSPECTIVE

(By Mohammed Ayub Khan)

I am not sure if the peculiar strains which confronted Pakistan immediately on its emergence as a free state are adequately understood.

The first strain was ideological. It is a common fallacy to believe that the concept of Pakistan was formed in a poet's dream. The poet, Dr. Muhammad Iqbal, was no idle dreamer. Nor can countries like Pakistan (364,737 square miles; population 80 million) spring from the nebulous realm of poetry alone. Iqbal was in fact a philosopher of traditional as well as modern thought who had made a careful study of human affairs, both East and West, and focused the light of his inquiry on the causes of economic and cultural subjugation to which the Muslims of India had been systematically subjected since their first abortive struggle for independence in 1857. It was in his presidential address to the annual session of All-India Muslim League in 1930 that he spelt out the broad outlines of a plan under which the Muslims of India were led to aspire to an independent state in which they would be free to follow their own way of life.

The All-India Muslim League based its charter on this idea and, under the leadership of Qaid-i-Azam Mohammad Ali Jinnah, launched a struggle which culminated in the establishment of Pakistan in August 1947.

Iqbal's thesis that in their free state the Muslims were to practice their own way of life posed an ideological problem which was not easy to handle. On one hand, there were many outside Pakistan who charged us with planning to establish an abdurate theocracy in the medieval sense of the term. On the other, most of us within Pakistan itself were not quite clear how to go about welding our spiritual ideals into the business of statecraft. The result was a great deal of loose groping which infected our politics and our intellect alike.

Pakistan was thus involved in the paradox of almost losing its ideology in the very act

of trying to fulfill it. This distraction was totally unwarranted, for Iqbal, one of the main creators of our ideology, had taken pains to define it in very clear terms: "In Islam the spiritual and the temporal are not two distinct domains and the nature of an act, however secular in its import, is determined by the attitude of mind with which the agent does it. It is the invisible mental background of the act which ultimately determines its character. An act is temporal or profane if it is done in a spirit of detachment from the infinite complexity of life behind it. It is spiritual if it is inspired by that complexity. In Islam it is the same reality which appears as church looked at from one point of view and state from another."

According to this concept, the state owes a singular and specific duty to its people. "The essence of Tauhid (unity of God) as a working idea is equality, solidity and freedom," according to Iqbal. "The state from the Islamic standpoint is an endeavor to transform these ideals into space-time forces, as aspiration to realize them in a definite human organization."

It is this sort of human organization which Pakistan aspires to become and one of my endeavors is to clear at least a part of the way by liberating the basic concept of our ideology from the dust of vagueness and ambiguities it has accumulated over the years.

The second strain which befell Pakistan immediately on its emergence was economic. Besides more than 9 million refugees who poured over the border in a state of appalling terror and distress, food fell desperately short owing to hundreds of thousands of acres of land going out of use every year on this account. Moreover, successive gova menace which still continues unabated. As much as 10 million acres of good fertile land have already fallen out of cultivation on this account. Moreover, successive governments were unable to control the situation adequately, and large-scale, organized smuggling, currency rackets, black-marketing and increasingly plastic standards of honesty and efficiency brought the affairs of the country to the verge of total ruin.

The third strain—which is a continuous one—is geographical. Divided into two wings (West Pakistan: 310,236 square miles, population 38,779,000; East Pakistan: 54,501 square miles, population 42,063,000), there are over 1,000 miles of India in-between without any assured means of land communications. Air travel is heavily subsidized but still too expensive for most people. The sea link involves a journey of about 7 days. There is diversity of languages, scripts and social customs. By the very nature of things, these factors are centrifugal and call for a new and bold experiment with political and administrative science to weave unity out of diversity. The situation is often difficult but not baffling, for a common ideology provides a positive base for cohesion. The firmness of this base is strong or weak accordingly as that ideology is understood and practiced rightly or wrongly.

Finally, there is the emotional factor. Until the advent of Pakistan, none of was in fact a Pakistani, for the simple reason that there was no territorial entity bearing that name. Actually, the boundaries of Pakistan were still being drawn and redrawn secretly in the Viceregal Lodge at New Delhi when independence was proclaimed. Never had the destiny of so many millions depended so helplessly on the arbitrary strokes of one man's pencil. It was because Mr. Radcliffe happened to make a small dent on the wrong side of the line that over 4 million inhabitants of Jammu and Kashmir have been locked in a life-and-death struggle for self-determination for 13 long and dreadful years.

So, prior to 1947, our nationalism was based more on an idea than on any territorial definition. Till then, ideologically we were Muslims; territorially we happened to be Indians; and parochially we were a conglomeration of at least 11 smaller, provincial loyalties. But when suddenly Pakistan emerged as a reality, we who had got together from every nook and corner of the vast subcontinent of India were faced with the task of transforming all our tradifional, territorial, and parochial loyalties into one great loyalty for the new state of Pakistan. This process of metamorphism was naturally attended by difficult psychological and emotional strains which we have borne in full measure—and are still bearing.

Under normal circumstances, it would have required most extraordinary efforts by the best of governments to cope with the problems which have been confronting us. But unfortunately neither have our circumstances been normal, nor did we have good strong governments; and they did not make even ordinary efforts to resolve the problems in front of them.

* * * * *

It is now the fashion to blame the politicians outright for this mess. Yes, they were guilty of many misdeeds of omission and commission; but there is one fundamental point in which, I have a feeling, they were rather sinned against than sinning. That is, they were given a system of government totally unsuited to the temper and climate of the country.

The British parliamentary system which we inherited and later adopted in the constitution of 1956 is largely an unwritten law and takes for granted too many prerequisites which do not really exist in a country like Pakistan. Our rate of literacy is appallingly low. Our means of communication are poor, even primitive. The rural population which constitutes over 80 percent of the total is hardly touched by the world outside the villages.

Just before independence, when Mr. Jinnah was anxious to put more and more of his party men in the Central and Provincial Assemblies of India to carry on the struggle for the idea of Pakistan, he issued an appeal: "Vote for a Muslim Leaguer even if it be a lamppost." People complied cheerfully; some even literally. When independence came, the gentlemen thus elected found themselves in a position of vantage to assume power in the new State of Pakistan, and the political system in their hands enabled them to keep delaying the making of a constitution for about 8 years. The outgoing Parliament of Pakistan had 80 seats, each member presuming to represent about a million of his countrymen for almost an indefinite period. Even under the Constitution of 1956, a member of the Provincial Assembly was required to be elected by more than 100,000 voters. Now this is the type of electoral college which just cannot work in Pakistan—or for that matter in any country where conditions like those of Pakistan obtain, as they do in many newly independent countries of Asia and Africa. An average villager with little or no education has no means of gaining any personal knowledge about a candidate who is mixed up in a population of 100,000 or more, spread over a large area without any advanced means of communication and contact. Votes cast under these circumstances cannot but be vague, wanton, and responsive to fear, coercion, temptation, and other modes of misguidance. This is exactly what had been happening in Pakistan. Whenever elections were held, they could be easily manipulated to return candidates with power to influence, money to bribe and nuisance value to coerce. Conditions such as these reduce the practice of democracy to a farce.

But this does not dismay us. Nor should it be taken to imply that we can do—or wish to do—without democracy. The revolution of October 7, 1958, was not aimed against the institution of democracy as such. No, it was only against the manner in which its institutions were being worked. There are two main reasons why we in Pakistan cannot but adhere to a democratic pattern of life and government. In the first place, as Muslims, we are brought up on two basic ingredients of democracy, namely, equality and fraternity. Anything to the contrary would be the negation of our spiritual faith and practice. And, secondly, we have to fight a long and arduous battle for progress and development in which every man, woman, and child of Pakistan must participate to the fullest possible extent. Democracy provides the only healthy and dignified way for arousing the willing cooperation of people and harnessing it to a sustained national endeavor.

We must, therefore, have democracy. The question then is: What type of democracy? The answer need not be sought in the theories and practices of other people alone. On the contrary, it must be found from within the book of Pakistan itself.

To my mind, there are four prerequisites for the success of any democratic system in a country like Pakistan:

1. It should be simple to understand, easy to work and cheap to sustain.

2. It should put to the voter only such questions as he can answer in the light of his own personal knowledge and understanding without external prompting.

3. It should insure the effective participation of all citizens in the affairs of the country up to the level of their mental horizon and intellectual caliber.

4. It should be able to produce reasonably strong and stable governments.

The scheme of "basic democracies" which has been launched in Pakistan is designed to meet most of these fundamental prerequisites. Under this scheme, the two wings of the country have each been divided into 40,000 constituencies with an average population of about 1,000. Every constituency elects one representative by universal franchise. In such a small and well-defined field of choice, voters of the meanest intelligence cannot go far wrong in putting their finger on the right type of candidate.

Ten such constituencies form a union council in the rural areas, and this elects its own chairman from among the elected members. Provision has also been made for nominated members to insure, where necessary, the representation of special interests, like women, minorities, etc. In towns and larger municipalities organization follows a similar pattern.

The elected chairmen of union councils and town committees represent their areas on the next tier of administration; namely, the Thana Council, which covers the entire area under the jurisdiction of a police station. From this stage, this system of associating the chosen representatives of the people with local administration travels upward covering all intermediary tiers, like tehsils, districts, and divisions, up to the provincial level. This is designed to insure a full sense of cooperation between the official and elected agencies at all stages of public administration.

The first elections to basic democracies were held last December and I feel the results were quite heartening. The average percentage of votes cast was 67 percent by men and 42 percent by women. Those elected included 14 percent university graduates, 78 percent literate and 8 percent illiterate members. They came from the real hard core of the country, the majority of them being middle-class and lower middle-class agriculturists, lawyers, medical practitioners, businessmen, retired government servants, workers, and artisans.

One great lesson which these elections brought out was that, for the first time in Pakistan, it seemed possible for an average citizen to seek election purely on his or her personal merit without the help of any financial, social or political backing. Also for the first time, the elected candidate finds himself in a position to participate effectively and directly in the affairs of the country as they exist immediately around him.

The Union Councils and Town Committees have been given a wide charter of duties and responsibilities ranging from local self-government to national reconstruction and development. Besides this, I am looking to this gigantic instrument of mass representation to achieve three other pressing objectives. First, to help throw up a fresh supply of local and national leaders. Second, to serve as a two-way traffic post between the government and the basic core of the people and to bridge the gulf which under the best of systems is bound to exist between them in countries where education is limited, distances are large and modern facilities for reaching the masses are not universal. And, third, I would personally like this body of 80,000 elected representatives to serve as the electoral college for the Parliament and, possibly, for the President. This is only my personal view, for I do not wish to prejudge the recommendations of the Constitution Commission which is at the moment seized of this and other allied problems.

The Constitution Commission of Pakistan, consisting of eminent judges, lawyers and other interests, was set up in February this year and has been entrusted with the following terms of reference:

"To examine the progressive failure of parliamentary government in Pakistan leading to the abrogation of the Constitution of 1956 and to determine the causes and the nature of the failure;

"To consider how best the said or like causes may be identified and their recurrence prevented;

"And, having further taken account of the genius of the people, the general standard of education and of political judgment in the country, the present state of a sense of nationhood, the prime need for sustained development, and the effect of the constitutional and administrative changes brought into being in recent months, to submit constitutional proposals in the form of a report advising how best the following ends may be secured: A democracy adaptable to changing circumstances and based on the Islamic principles of justice, equality and tolerance; the consolidation of national unity; and a firm and stable system of government."

* * * * *

While the Constitution is still in the making, there is time to complete the reforms already in hand or give a start to those which are still under contemplation. The meaning of all this activity is to prepare the ground for the growth of a happy and healthy life which, after all, is the end product of all human endeavor.

An archaic type of feudalism which existed in Pakistan—particularly West Pakistan—had vested the entire political, economic, and social might of the country in a limited group of families. It was impossible to make any advance in any direction without first breaking this monopoly of power. Therefore, land reform was one of the first measures to be taken by the new regime. This was a major operation but it was performed peacefully and scientifically and was attended by no manner of tyranny or injustice. This is a far-reaching socioeconomic change and its full impact will be felt only with the passage of time.

Other fields in which reforms have been undertaken include education, public health, fiscal systems, law courts, civil administration, and the rehabilitation of refugees. The object is to get us to the starting point of development, whence we may be better able to grapple with some of the most pressing and immediate of our problems. These are: fighting the grave menace to the land of salinity and waterlogging; curbing the excessive rate of growth of population; and launching the next 5-year plan for national development, estimated to cost over 19 billion rupees (about $4 billion). According to experts, these figures are not astronomical but only reasonable.

The next 15 to 20 years are going to be most crucial for Pakistan. Either we "make the grade" in this period or we do not. If we fail to make the grade, we are bound to be submerged under the tidal wave of communism which is consantly lashing its fury all around us. Since we do not seek this fate we must move forward, and do so quickly. It is here that our eyes turn toward our friends and allies. They have already given us magnanimous aid, for which we are most grateful. But there are reasons of history which entitle us to claim still more.

During the last 200 years or so the area which is now Pakistan was subjected to foreign rule. This stunted our growth immeasurably and all this long period of time was lost to us for preparing ourselves to move with the modern scientific times. We have now to catch up with the fast-moving world—and this will require extraordinary endeavor as well as expenditure.

It was during the period of imperial rule that the British industrial development started and gained momentum with resources which to a large extent were taken from the colonial areas. The British industrial development in a way gave a fillip to the American industrial development. It is common knowledge that up to the Second World War, Britain had enormous investments in both the Americas. Most of the progress in the Commonwealth countries and Dominions was also stimulated by the British industrial development. So far as the area now forming Pakistan is concerned, its manpower was generally employed to man the British armies to maintain and protect the empire. For this reason, this part of the Indian subcontinent was purposely kept industrially backward so that the populace would not be diverted into other channels of employment.

Moreover, in the context of present-day world politics Pakistan has openly and unequivocally cast its lot with the West, and unlike several other countries around us, we have shut ourselves off almost completely from the possibility of any major assistance from the Communist bloc. We do not believe in hunting with the hound and running with the hare. We wish to follow, and are following, a clear and unambiguous path.

All these factors lead to one conclusion: that the English-speaking world ought to feel a special responsibility to assist Pakistan in attaining a reasonable posture of advancement. It is not just a claim. It is in fact the dictate of history.

Potsdam Papers

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, August 31, 1960

Mr. KEATING. Mr. President, there has just been printed in the Washington Star a most interesting series of articles relating to the events of the Potsdam Conference, and most particularly to the decision of President Truman to drop the atomic bomb on Japan. It now seems clear, in spite of the rather cloudy reference in Mr. Truman's memoirs, that there had been a Japanese offer to surrender before the bomb was dropped. It also appears that Mr. Truman trusted Josef Stalin enough to rely on Stalin's judgment in this matter, and to let Stalin ignore a clear and definite Japanese peace initiative.

Mr. President, it is no surprise to learn what many of us knew all the time—that Stalin cared a good deal less for peace than he did for Soviet expansion. But it is a surprise to learn that a perfectly legitimate Japanese peace offer, transmitted through regular diplomatic channels, was thrust aside in such a cavalier manner. That was not a policy of brinksmanship; it was a policy of going over the brink. The long-term cost of that policy in the life and health of the Japanese people has been a great one. The price of that policy in Japanese-American relations is one that we are still paying today.

Mr. President, if there is one thing that these articles from State Department records reveal, it is that judgment is a cardinal factor in conducting foreign affairs. And judgment comes only from experience. It is interesting to observe that, with few exceptions, the trained, professional Foreign Service officers were more often right in assessing Stalin's aims than were the political appointees attached to the White House or in the State Department.

Mr. President, I have found these articles very revealing. They tell the story of an unfortunate era in this country's foreign policy, an era which many of us would like to forget. But I think we would be foolish, indeed, if we did not try to learn from the errors of the past. If we remember how badly President Roosevelt and President Truman were fooled by "Uncle Joe Stalin," then we shall be far less likely to be taken in by such tactics in the future.

Mr. President, I ask unanimous consent that some of these articles be printed in the Appendix of the RECORD.

There being no objection, the first article was ordered to be printed in the RECORD, as follows:

[From the Washington (D.C.) Evening Star, Aug. 21–22, 1960]

TRUMAN BACKED STALIN'S STALLING ON JAPAN PEACE, NOTES INDICATE—THE POTSDAM PAPERS

(By Fletcher Knebel and Charles W. Bailey)

Josef Stalin, the late Soviet dictator, with the approval of former President Harry S. Truman, intentionally stalled off a Japanese attempt to end World War II 3 weeks before the dropping of the first atomic bomb on Hiroshima.

Details of the decision by Stalin and Mr. Truman to brush off Japanese surrender efforts are revealed for the first time in the still-confidential unpublished Potsdam Papers.

The papers give no clue to the precise reason for the decision but there are indications that the desire for an unconditional surrender by the Japanese was the main sticking point.

The writers gained access to the two volumes—totaling more than 2,000 pages—of

Potsdam documents, meticulously prepared by State Department historians and slated for publication after the November elections.

The massive papers deal with the American-British-Russian terminal meeting, held in Potsdam in July 1945, where the allies in the war against Hitler sought to divide the plunder of war and to pave the road to a peace conference—a conference that was never held.

For the Americans, headed by a new President, Harry S. Truman, these were days of disillusionment over Russian aims and methods.

For the British, led at first by the doughty Winston Churchill, they were days of bitter vindication of their belief that Russia sought nothing less than the rule of all Europe.

For the Russians, led by the cynical and ruthless Stalin, they were days of gimlet-eyed bargaining to protect their hold on the newly communized lands behind what Mr. Churchill was already calling the "iron fence."

While a number of American and British memoirs have told part of the story of Potsdam, the conference papers shed new light on the momentous issues that still remain unresolved on this 15th anniversary of Japan's surrender.

New and penetrating light is shed especially on one controversial question—that of Japan's abortive efforts to surrender before America dropped the single bomb that killed 80,000 Japanese at Hiroshima in an instant.

Until now, it has been assumed that the Soviets acted independently and without seeking the advice of the United States when they put off the Japanese attempt to get them to act as mediators in arranging a surrender. President Truman's own memoirs give this impression.

But the unpublished papers reveal that on July 18, 1945, in Stalin's lakeside villa at Babelsberg, Germany, Truman joined the Russian dictator in making a key decision in the surrender story.

It was only the second time the two had met—their first encounter was the day before—and they were alone except for their Foreign Ministers (James F. Byrnes for the United States, V. M. Molotov for Russia), and their interpreters.

Charles E. (Chip) Bohlen, then a political adviser and Mr. Truman's personal interpreter, kept the only record of the talk—a series of fragmentary notes jotted down as guides for translation. On March 28 of this year, Mr. Bohlen, now Special Assistant on Soviet Affairs to Secretary of State Christian Herter, himself wrote an amplification of the notes for State Department historians.

He said the opening remarks involved a comment by President Truman on the views from Stalin's villa overlooking the lake. Mr. Bohlen then took up the surrender story:

"Stalin said that the Soviet Union had received a communication from the Japanese, and he handed to the President a copy of a note from Sato (Naotake Sato, Japanese Ambassador to Moscow) * * * with a message from the Emperor. Secretary Byrnes then referred to something which Harry Hopkins had told him following Mr. Hopkins' return from Moscow in June 1945.

"Stalin inquired of the President whether it was worthwhile to answer this communication. The President replied that he had no respect for the good faith of the Japanese. Stalin pointed out that the Soviet Union was not at war with Japan and that it might be desirable to lull the Japanese to sleep, and possibly a general and unspecific answer might be returned, pointing out that the exact character of the proposed (Prince Fuminaro) Konoye mission was not clear. Alternatives would be that they might ignore it completely and not answer, or send back a definite refusal.

"The President said that he thought the first course of action would be satisfactory. Molotov pointed out that it would be completely factual, since it was not entirely clear what the Konoye mission would have to offer.

"Secretary Byrnes observed it was possible that this Japanese move had been inspired by fear of what the Soviets intended to do. Molotov said that he was sure the Japanese could guess and Stalin remarked that they had observed Soviet forces and tanks, etc., moving in the Far East. There seems to have been a discussion here of previous Japanese peace feelers not only to the U.S.S.R. but also to the Allied powers, and the President mentioned that the United States had had some indication via Sweden."

TRUMAN ACCOUNT COMPARED

Mr. Bohlen's account in the Potsdam papers differs sharply from the impression left by Mr. Truman in his memoirs published in 1955. In "Year of Decisions," Mr. Truman has only this to say of his second meeting with Stalin on July 18:

"Later I went to Marshal Stalin's quarters to return his call and by 4 o'clock in the afternoon I arrived at Cecilienhof Palace for the second meeting of the conference."

Later in his chronicle of Potsdam, Mr. Truman alluded to the discussion of the 18th, but without indicating, as the Bohlen notes do that Stalin sought Mr. Truman's views and that Mr. Truman shared in the decision to stall the Japanese overture. Mr. Truman's comment in his book follows:

"Stalin had told me, shortly after our arrival in Potsdam, that the Japanese had asked the Kremlin if it would be possible for Prince Konoye to come to Moscow. The Russians, so Stalin had informed me, had replied that they could not answer such a request until they knew what he wanted to talk about."

The night of July 18, Stalin's first suggestion, as approved by Mr. Truman, apparently was phoned or wired to Moscow, for Solomon A. Lozovsky, acting Commissar for Foreign Affairs, called in Japanese Ambassador Sato and handed him a note which did little more than stall off the idea of a peace mission to Moscow. It read in part:

"By order of the Government of the U.S.S.R., I have the honor to call your attention to the fact that the imperial views stated in the message of the Emperor of Japan are general in form and contain no concrete proposal. The mission of Prince Konoye, special envoy, is also not clear to the Government of the U.S.S.R."

The Soviet-American agreement of July 18 to brush aside the official peace feeler from Emperor Hirohito of Japan had this background, as revealed in the Potsdam papers:

First, U.S. officials already were aware of Japanese efforts to end the war by mediation. On July 6, as Mr. Truman was leaving for Potsdam, the U.S. Minister in Sweden cabled the State Department that Prince Carl Bernadotte, nephew of King Gustav, had been told by the Japanese military attaché in Sweden that Japan had lost the war and wanted to enter surrender negotiations through the King of Sweden. Also, U.S. officials knew of Japanese peace feelers through Switzerland.

STALIN PROMISE RELATED

In addition to these overtures, the United States had broken the Japanese code and certain of the messages passing between Tokyo and the Japanese embassy in Moscow on surrender offerings there were known to top United States officials.

Second, Russia had long promised to enter the Japanese war sometime in August. At Yalta earlier in the year, Stalin had promised to move against Japan about 3 months after the defeat of Germany. On May 28 in Moscow, he told Harry Hopkins, special emissary, Ambassador Averell Harriman and Mr. Bohlen that Russia would be ready to enter the Pacific war August 8. Later, at Potsdam, Stalin again indicated his armies would move on that date.

Third, President Truman knew that the United States possessed the new atomic bomb, a weapon of devastating power that would knock Japan out of the war. When Mr. Truman conferred with Stalin on the 18th, he already had seen a dramatic message telling of the success of the first atomic test at Alamagordo, N. Mex., on July 16. Gen. Leslie R. Groves, chief of the Manhattan Project, had said the weapon would be ready for use in the Pacific about August 1.

Fourth, "unconditional surrender" of the Japanese was U.S. Government policy, first proclaimed at the Cairo Conference in 1943. It had also become Stalin's policy. On May 28 at the Kremlin, according to the Potsdam papers, he told Harry Hopkins, Mr. Harriman and Mr. Bohlen that he favored unconditional surrender and "therefore felt it would be wiser to do away with the institution of the emperor," according to Mr. Bohlen's notes.

EMPEROR A FACTOR

Both Secretary Byrnes and former Secretary of State Cordell Hull opposed efforts of Under Secretary of State Joseph C. Grew and Secretary of War Henry L. Stimson to modify "unconditional surrender" to the extent of letting the Japanese keep their Emperor.

Both Assistant Secretaries of State, Archibald MacLeish and Dean Acheson (later Mr. Truman's Secretary of State) backed up Secretary Byrnes in opposition to Mr. Grew and Mr. Stimson. On July 6, 1945, Mr. MacLeish wrote a top secret memo to Mr. Byrnes which said in part:

"What has made Japan dangerous in the past and will make her dangerous in the future if we permit it, is, in large part, the Japanese cult of emperor worship which gives the ruling groups in Japan—the Gumbatsu—the current coalition of militarists, industrialists, large landowners, and officeholders—their control over the Japanese people.

"As Mr. Acheson pointed out in the staff committee, the institution of the throne is an anachronistic, feudal institution, perfectly adapted to the manipulation and use of anachronistic, feudal-minded groups within the country."

In a meeting in Mr. Grew's office on July 7, the Under Secretary renewed his arguments for letting the Japanese keep the Emperor and Mr. MacLeish again argued against him, as he did Mr. Acheson.

"Mr. Acheson," according to the notes of James H. Lewis, foreign affairs specialist, said "he could not understand why, if the Emperor had no importance in Japanese warmaking capacity, the military element in Japan should be so insistent on retaining the Emperor."

HIROHITO HAD SWITCHES

At that very moment, however, Emperor Hirohito had thrown his prestige against the military clique and was advocating an early suit for peace.

On July 12, 1945, in one of the many peace messages zipping between Foreign Minister Togo in Tokyo and Ambassador Sato in Moscow, Mr. Togo represented Emperor Hirohito thus:

"His majesty the emperor is greatly concerned over the daily increasing calamities and sacrifices faced by the citizens of the various belligerent countries in this present war and it is his majesty's heart's desire to see the swift termination of the war."

The Potsdam papers reveal the swift chronology of doom after the July 18 meeting of Stalin and Mr. Truman.

On July 21, Foreign Minister Togo sent Ambassador Sato the goals of the Konoye mission which Stalin had demanded:

"The mission of the special envoy Konoye is to ask the Government of the U.S.S.R. for its assistance in terminating the war and to explain our concrete intentions concerning the matter in accordance with the wishes of the emperor."

On July 24, Mr. Stimson made a last unsuccessful effort with Mr. Truman to have the projected ultimatum to Japan indicate a continuance of the dynasty. The same day President Truman informed Stalin of the existence of the atomic bomb.

On July 25 Mr. Stimson and President Truman approved orders written in Washington to drop the first atomic bomb on Japan "after about August 3, 1945." That same day Foreign Minister Togo ordered Ambassador Sato to see Mr. Molotov personally on plans for surrender. This was stressed as "urgent," although 4 days before Togo had reiterated to Sato that "we can not accept unconditional surrender."

JAPAN REJECTS SURRENDER

On July 26 the United States, Britain, and China demanded that Japan surrender without conditions or face "prompt and utter destruction."

On July 27, Ambassador Sato wired Foreign Minister Togo that he must promptly come out with "a concrete proposal" to end the war.

On July 28, Japan rejected the unconditional surrender ultimatum and Minister Togo prodded Ambassador Sato again to see Foreign Minister Molotov in the suit for a peace that would be less than unconditional surrender.

Also on July 28, Stalin informed Mr. Truman of the July 21 message of Togo in which he said the purpose of the Konoye mission was to ask Russia to assist in terminating the war. Stalin said he would reply "No," and Mr. Truman, without comment, thanked him for the information.

On July 29 Foreign Minister Molotov called at Mr. Truman's quarters and asked that the Allies in the Asian war address a "formal request" to the Soviets to enter the war against Japan. According to Mr. Bohlen's notes, Mr. Molotov said that "this could be based on the refusal of the Japanese to accept the recent ultimation to surrender and made on the basis of shortening the war and saving lives." Mr. Truman said he would consider the proposal.

On July 30 Ambassador Sato called again at the Moscow Foreign Office, but was told only that it would be several days before Stalin and Mr. Molotov returned from Berlin.

On August 6 the first atomic bomb in warfare demolished the city of Hiroshima.

On August 8 Ambassador Sato called on Mr. Molotov and was handed a Russian declaration of war against Japan.

On August 9 the second atomic bomb exploded over Nagasaki.

Japan offered to surrender on August 10, provided she could retain the Emperor. On August 11 the United States accepted, provided the Emperor was made subject to the authority of the Allied commander. On August 14 Japan surrendered on those terms.

It was unconditional surrender—as modified by several conditions.

NOTE OUTLINES DETAILS

State Department historians prefer to leave the evaluation of the whole surrender episode to others. An editor's note opening the section of the Potsdam papers dealing with the surrender overtures has this to say (deletions refer to documents and other sources):

"It has not been possible to establish the precise extent to which the U.S. delegation at the Berlin conference was aware of the contents of the papers of Japanese origin printed in this section and in volume II • • • the contents of certain of these papers were known to U.S. officials in Washington, however, as early as July 13 • • • and information on Japanese peace maneuvers was received by Secretary of War Henry L. Stimson at Babelsberg on July 16.

"It also has been determined that a series of messages of Japanese origin on this subject was received by the U.S. delegation during the course of the Berlin conference and that these messages were circulated at Babelsberg to some members of the President's party.

"Furthermore, in a conference on January 24, 1956, between Truman and members of his staff and Department of State historians, Truman supplied the information that he was familiar with the contents of the first Japanese peace feeler—before Stalin mention it to him at Babelsberg—and that he was familiar with the contents of the second Japanese peace feeler—before Stalin brought it to the attention of Truman and Attlee at the 10th plenary meeting of the Berlin conference on July 28."

Highways and Planning

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, August 31, 1960

Mr. WILLIAMS of New Jersey. Mr. President, on August 23 I introduced a bill to encourage greater coordination of Federal highway programs with other Federal programs and local planning efforts. As I explained at that time, the bill would:

First. Attempt to establish a new policy establishing the principle that highway systems in urban areas should assist in the development of more orderly and well-balanced communities in which to live and work.

Second. Establish additional standards to guide the Secretary of Commerce in approving highway programs and plans, and directing him to require greatest possible coordination of Federal programs that affect urban areas.

Third. Authorize the establishment of regional planning commissions to submit highway programs and project recommendations for each standard metropolitan area in the Nation.

Fourth. Change procedure for public hearings and finance operation of the Commissions by increasing research and planning funds available to the States from 1½ percent to 2 percent.

Mr. President, the bill attempts to deal with the problems that arise often when important highways must cross highly populated areas. At the time of introduction I emphasized that I would welcome any suggestions on the bill because I believe that a thorough discussion of the impact of the Federal highway program on our urban communities is badly needed.

I am happy, therefore, to offer for the RECORD two editorials dealing with the proposed legislation. I believe that the editorials discuss the need for the bill and suggest the particular problems faced in New Jersey. Both appeared on August 29, one in the Bergen Evening Record, Hackensack, N.J., and the other in the Passaic Herald News, Passaic, N.J.

Mr. President, I ask unanimous consent to have the editorials printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Bergen (N.J.) Evening Record, Aug. 29, 1960]

A WAY TO DISSOLVE THE FIRST ROAD JAM

Senator WILLIAMS, Democrat, New Jersey, uneasy about the turmoil caused by the East-West Freeway planning in Essex County, has offered a suggestion to cope with the disruption caused by the construction of big highways. It deserves the thought and comment Mr. WILLIAMS asks of us.

The Senator has introduced a bill that would, among its provisions, encourage the formation of regional planning commissions. They would be a sort of clearinghouse and sounding board for opinion on such matters as highways. As evidence of the need for some such discussion, Mr. WILLIAMS said this to fellow Senate Members:

"So far there has been little progress in the development of cooperative planning for metropolitan areas as a whole. For example, one community may wish a road to run from point A to point B in its area but the adjacent community may desire a quiet residential neighborhood at the spot where it joins point B. More than likely, any road through the two communities will respect the desires of neither."

This is only too true if the road is being built with Federal funds—and what main road isn't these days? Mr. WILLIAMS said he was surprised to learn from the U.S. Bureau of Public Roads that local needs are not given consideration equal to that accorded interstate commerce's demands.

How many times have we in Bergen County seen Mr. WILLIAMS' example at its most parochial? Just mention a proposed road alinement, and right away every municipality involved hollers, "Not here"— before there is anything but a tentative tracing on a map.

Mr. WILLIAMS suggests that some of this pain be prevented by the establishment of regional planning commissions in each standard metropolitan area. (Metropolitan areas are defined by the Census Bureau, sometimes arbitrarily and unrealistically. Bergen, for instance, is listed under Paterson-Passaic-Clifton. Mr. WILLIAMS says he uses these definitions only because they're handy; the Governor or the legislature of any State could work out the method best suited to specific needs.) The planning commissions would listen, weigh, and recommend. They would have no powers of enforcement, but they might be heard where until now there has been very little sympathetic attention.

Mr. WILLIAMS says he expects no action on the legislation this year. He is sending the proposal to all official planning bodies in New Jersey. He wants their reactions. They should volunteer it not in the belief that this is one more ticket to supergovernment but that it is, as Mr. WILLIAMS described it, a plan designed to help overcome inherent difficulties faced by State highway departments and individual communities when they have to deal with the inevitable big roads.

[From the Passaic (N.J.) Herald News, Aug. 29, 1960]

ESSEX FREEWAY BATTLE CONTINUES

The demand in Essex County for depression rather than elevation of the East-West freeway has led U.S. Senator WILLIAMS to introduce a bill requiring that "community values and community living" be given the same consideration as the needs of interstate commerce in the Federal interstate highway construction program.

Senator WILLIAMS says he is introducing the bill because he feels "thorough discussion of the impact of the Federal highway program on our urban communities is badly needed". The bill is a tentative approach to the problem, Mr. WILLIAMS indicates by his statement that if discussion shows the need for changes, he will make them in time for reintroduction of the bill in January.

In Essex, the criticism has been made that the planed elevation of a 7-mile stretch would cause blight in the densely populated adjacent areas. Federal highway authorities have refused to approve depression because it would add $13 million to the cost. The affected communities have been told that they can have a depressed highway by putting up the extra money. They have dismissed the suggestion as out of the question.

Unquestionably, the Essex objectors are on sound ground in opposing an elevated highway. The experience with elevated structures in New York and other cities has proved that they are undesirable. The idea of subjecting Federal highway projects to the scrutiny of planners, as the Williams bill proposes, is also sound.

The distressing feature of the Essex clamor is the refusal to consider an alternative, namely, the construction of a toll highway. A depressed toll highway could be built speedily. The users would pay for it. Essex, however, prefers to use its political power to try to get someone else to foot the bill, either the Federal Government or the rest of the State.

Weaver's Annual Report

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 29, 1960

Mr. WEAVER. Mr. Speaker, every year I have made an effort to keep my friends and neighbors in the First Congressional District completely informed as to the activities of the Congress. I have from time to time made special reports which have been universally greeted with favor.

Once again this year I am making such a report to my constituents which, under leave to extend my remarks, I now place in the RECORD:

WASHINGTON, August 31, 1960.—The 86th Congress is now history—so, let's look at the record:

Defense: We are the most powerful nation on earth and we'll remain that way. We have built a well-balanced, flexible and retaliatory force to keep the peace.

Economy: We wound up the fiscal year with a $1 billion surplus. Prospects are bright for an even better surplus next year.

Socialist trends: Although still strong among the "big spend" boys, much of the socialistic legislation was blocked.

Farm problem: The big failure of the 86th Congress. The leadership refused to work for a sound solution to the problem.

DEFENSE POSTURE

As a member of the Appropriations Subcommittee on Defense I have concentrated for 2 years on the effort to build a balanced, flexible defense program geared to keeping the peace.

Bombers: Still the backbone of our retaliatory force. We have a fleet of heavy bombers capable of delivering a devastating nuclear blow anywhere in the Communist empire—ready around the clock.

Missiles: Already squadrons of Atlas ICBM's are operational; Titan soon to be in the operational category; Minuteman, highly mobile and therefore less vulnerable from attack, is well ahead of schedule; Polaris has passed its tests and the first missiles will be on station with the fleet this fall. We'll have close to 50 of these missiles at sea by spring. Intermediate missiles backing up our "at home" force we have shorter range missiles stationed abroad, near Communist borders, capable of dealing severe blows to selected targets.

Intelligence: Always a risky business, our intelligence agents have been able to paint a truer picture of Soviet capabilities. We are ahead of the Soviets in military matters. They have some interesting gadgets and have made some spectacular propaganda splashes. But responsible leaders of both parties agree we are stronger. Democrat GEORGE MAHON of Texas, chairman of the Committee on Defense Appropriations has this to say: "We have a greater overall striking ability than the Soviet Union. This Nation is stronger than any nation in the world today."

BUDGET ECONOMY

The big-spend boys were in the saddle as the 86th Congress got underway, but a determined effort by the Republican minority backed up by the potent Presidential veto helped to hold the line against bigger government, more inflation. However, the pressure is still there.

Supporters of big-spend and giveaway programs such as subsidies for airports, schools, socialized medicine, area redevelopment, and urban renewal are still fighting.

If we want the Federal Government to be all-powerful, all-supporting, they have the proposals. If all the spend-ourselves-rich bills had been passed, it has been estimated our annual budget would be in excess of $125 billion and you would foot the bill.

LABOR REFORM

In one area, the cleanup of some underworld elements in labor, the 86th Congress made real progress. Enactment of the Landrum-Griffin bill will go down in history as a great step forward.

The bill was enacted after years of investigation, months of hearings that developed a sordid story of corruption, vice, and undue political pressure by some in the labor movement. Enacted into law last year, the cleanup drive has already begun.

But the Hoffa-Carey crowd is still a potent force. Many will recall that AFL–CIO Vice President James Carey wrote an open, threatening letter to everyone who supported sound labor-management reform legislation. I was the recipient of one of those letters. I am proud to have been among those who stood up to be counted in favor of good legislation to protect the rank and file of labor.

SOCIALIST TREND

There is a saying that in Washington they have more solutions than the country has problems. Every local problem becomes a national crisis and they turn to Uncle Sam for a solution—always a costly one and always involving more government, a bigger bureaucracy.

The billion-dollar emergency housing proposal is an example; private builders are keeping abreast of the housing needs; never in history have so many owned their homes, and yet, there are those in the House and Senate who want the Government to expand in this field, and to finance directly home buying and homebuilding.

This would mean Government control and absolute standardization. Every home in America would look exactly alike. We would become one gigantic collective housing development.

NEGLECT OF FARMERS

The Democrats have a 2-to-1 margin in both the House and the Senate and control all of the committees of the Congress, and yet they were unable to come up with a reasonable, fair, and just solution to the farm problem.

Several proposals were made including the old Brannan plan in new clothing. Only one major farm bill, a modified wheat program, came out of the House Agriculture Committee and northern Democrats teamed up to kill it. The Senate passed a wheat bill which would have cut both acreage allotments and support prices.

There are several reasons why sound farm legislation cannot be written under the prevailing circumstances.

Sectionalism: In the Senate, the four ranking Democratic members of the Agriculture Committee are from the Deep South; are interested in sugar, peanuts, tung nuts, cotton, and tobacco. Peanuts are one of the support crops and are involved in setting parity payments and, in a literal sense, the price support level depends on the size of baseball crowds. In the House, the top nine Democrats on the committee come from the South. The chairman is a tobacco farmer. Therefore it is difficult to generate enthusiastic support for wheat or grain crops.

Partisanship: Unfortunately our farm citizens have been the victims of political maneuvering of the most cynical kind.

There are those in Congress who obviously prefer a political issue to a solution. Proposal after proposal went down the drain or into pigeonholes. Senate Majority Leader LYNDON B. JOHNSON, when listing "must" legislation after reconvening of Congress, pointedly ignored the farm problem. The Democratic presidential nominee has a solid Benson voting record. Every sound program has been watered down until nothing workable remains.

I personally have introduced or supported a number of major and workable proposals; the wheat marketing bill, industrial use of surpluses proposal, payment in kind, the Weaver farm plan.

Any one of these proposals would help ease the farm situation. As always I stand ready to cooperate with anyone in Congress who advances constructive proposals along these lines.

RESOURCE DEVELOPMENT

This Congress has seen major advances for two vitally important resource development and protection projects. Construction has begun on Red Willow Dam. Construction funds for Salt-Wahoo have been included this year. I was happy to head up the presentation to the House Appropriations Committee on both projects in 1959 and 1960.

Mr. Speaker, I was this year highly honored by the Civic Affairs Associates, Inc., by receiving a certificate of merit. This group represents a conservative point of view and believes in freedom of Americans, both in the economic and political sense.

That certificate is signed by Mr. Alex Akerman, Jr., vice president-secretary, and Mr. Biehl P. Clarke, president, and it reads as follows:

Certificate of merit for service in behalf of economic and political freedom. The Honorable PHIL WEAVER, Congressman from Nebraska, has demonstrated by his voting record that he is an advocate of economy in government, limited government, free enterprise, economic growth with stability, and equality under the law. On key rollcall votes during the 86th Congress, as selected by the Free Citizen's Voting Record,

Congressman WEAVER scored in the top 20 percent of the House of Representatives in his support of these principles of sound and forward-looking government. In recognition thereof, the board of directors of the Civic Affairs Associates, Inc. awards this certificate of merit.

By the Board of Directors, August 19, 1960.

ALEX AKERMAN, Jr.,
Vice President-Secretary.
BIEHL P. CLARKE,
President,
Civic Affairs Associates, Inc.

How To Reach Latin America

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 31, 1960

Mr. IRWIN. Mr. Speaker, in a letter to the editor of the New York Times this morning, Mr. Loring M. Hewen, of New York City, recommends that the United States conduct broadcasts to Central America and the Caribbean to let the people there know more about our country and to give them an opportunity to learn the truth about us. The writer offered a novel proposal, to set up a broadcasting station on the U.S.-owned Swan Islands off the coast of Honduras and to transmit Spanish-language programs to Central America and the Caribbean. The idea is excellent. As Mr. Hewen points out, the Voice of America's South American broadcasts are limited to 1 hour a day and are transmitted by shortwave stations. This is a drawback since the shortwave broadcasts reach only that fraction of the population owning shortwave receivers. I have long advocated use of radio to tell the true story of America, not only to Central America and the Caribbean but to all of Latin America. There is no doubting the fact that we are in trouble there because of a lack of understanding, among other things, which might be vastly improved through use of regular, longwave radio broadcasts. During the past 2 years, the Honorable JOSEPH M. MONTOYA and myself have conducted weekly radio broadcasts in Spanish for use on the Voice of America's Latin American programs and while this was something it was obvious that much, much more must be done. It was obvious further that much, much more could be done. There is no question in my mind but that the benefits derived from whatever it might cost would constitute profitable returns for the investment. Under permission previously granted, I include Mr. Hewen's letter for the information of all Members of the Congress:

CENTRAL AMERICA'S AMITY—RADIO BROADCASTS URGED BEAMED TO "COMMON MAN" OF AREA

To the EDITOR OF THE NEW YORK TIMES:

Whatever day this letter is read the chances are that the front page of the New York Times on that morning will have carried a story about some anti-American activity somewhere in the Caribbean or central America.

The almost daily reports leave no doubt that the recruiting campaign of international communism is gathering strength. Nor can there be a doubt that the prestige and popularity of the United States are falling. I have some personal knowledge of it.

Many years ago I started making annual trips to central America. A visiting American was a welcomed and important guest then, in most towns and all of the rural communities. Today I no longer detect this universal feeling of friendship; I sense instead a resentment directed at any "Norte Americano" by many central Americans.

Why this change of heart? I do not have all the answers, but some are obvious: that small percentage of American tourists who vex with their air of superiority and their flouting of local customs; the unrebutted libels heaped against the United States by radical politicians of the Castro ilk; the widespread conviction, rightly or wrongly held, that Latin America has been discriminated against in our foreign aid programs.

DISSEMINATING TRUTH

A false picture of America and Americans? I think so. But I also realize that a central American could hardly think any differently. We are not doing enough to tell him the truth.

We are not communicating directly to the common man. We are not reaching him with facts about the many fine things being done in his country by the U.S. Government and private organizations like the Rockefeller fund. He does not regularly read newspapers, so he does not know much about what is going on in the world. He does not own a shortwave radio, so he cannot hear the truth as the Voice of America tells it in its 1 hour of Spanish broadcasting every day.

We have almost ignored addressing this common man. We have left him to feed his large family from his small cornfield. We have taken no notice of him as he works on a company plantation or builds a road by the profuse sweat of his brow. In fact, we scarcely know this man even exists until the day when, shod in sandals cut from old auto tires and armed with machete and shotgun, he and hundreds like him swarm into the capital city to unseat a government.

But there is a way we can reach this man. It can be done effectively. It can be done now.

Almost every little grocery, bar, and restaurant in Central America has a radio going full blast most of the time. Even the poorest homes often manage to afford a small radio to tune in the local stations. Moreover, 100 miles off the coast of Honduras lie Swan Islands, an almost unknown possession of the United States. Here, near the center of the east coast of Central America, we could establish a powerful transmitter receivable on the ordinary small radio.

PROGRAM MATERIAL

With this transmitter Spanish-speaking Americans could bring the truth to our friends, potential friends, and even our disenchanted friends in southern Mexico, El Salvador, Honduras, Costa Rica, Nicaragua, Guatemala, and parts of Cuba and Panama.

The choice of program material I leave to the experts—our own famed Voice of America, for example. I daresay, though, that a balanced diet could be established of popular music, factual news, and features of popular appeal in that area (talks on child care, advice on sanitation, reporting of improvements in farming methods, religious programs, perhaps lessons in basic English).

All are things that would interest these near neighbors of ours and let them know that we are their friends, that we do have their interests at heart, and that Americans of all nationalities will live better in the long run if we resolve to stick together.

"Papa" Duclos, now chief of staff of the French Communist Party, recently addressed an enthusiastic crowd in Havana. They cheered when he promised that the Castro chant "Cuba si, Yankee no" would soon spread to become "Latin America si, Yankee no." Let us try as hard as we can to keep his words from proving to be a prophecy. One step we can take now. Swan Islands are there. Money for the necessary radio equipment could be found. The people of Central America will listen. Can we afford not to act now?

LORING M. HEWEN.

NEW YORK, *August 29, 1960.*

Special Town Meeting Urges Action on New Post Office for Goshen, Conn.

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 31, 1960

Mr. KOWALSKI. Mr. Speaker, the Post Office Department admits the need for new post office facilities in the town of Goshen, Conn.

However, the people of Goshen are understandably disturbed by the delay of the Post Office Department in proceeding with a new post office.

A special town meeting was held recently, at which the following resolution was adopted:

FRANK KOWALSKI,
Congressman at Large, House Office Building, Washington, D.C.

HONORABLE SIR: At a special town meeting held in Goshen, Conn. on August 9, 1960, the following resolution was adopted:

"Whereas the U.S. Post Office Department has determined that the present post office facilities for the town of Goshen are inadequate; and

"Whereas said Post Office Department has investigated several possibilities for the construction of new post office facilities in the town of Goshen: Now, therefore, be it

"*Resolved*, That this meeting go on record as urging the Post Office Department to proceed as soon as possible with the necessary steps to provide new post office facilities; and it is further

"*Resolved*, That a copy of this resolution be forwarded to U.S. Senators THOMAS DODD and PRESCOTT BUSH, and to U.S. Congressman FRANK KOWALSKI and JOHN S. MONAGAN."

Very truly yours,

VIOLET W. VAILL,
Goshen Town Clerk.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).
